Tannic acid, per lb	$2
Tarred cables or cordage, per lb	3 cts.
Teas, of all kinds, per lb	25 cts.
Terra Alba	20 per ct.
Teutenegue, manufactured in blocks or pigs, per lb	1½ cts.
Do., in sheets, per lb	2¼ cts.
Thread, pack	40 per ct.
Tica, crude	20 per ct.
Tin plates, galvanized, per lb	2½ cts.
Tobacco, in leaf, unmanufactured and not stemmed, per lb	35 cts.
Do., manufactured of all descriptions, per lb	50 cts.
Do., stemmed, not otherwise provided for, per lb	50 cts.
Do., snuff made of, per lb	50 cts.
Toys	50 per ct.
Turpentine, spirits of, per gallon	30 cts.
Twine, flax or linen	40 per ct.
Ultramarine	25 per ct.
Velvets, silk	60 per ct.
Vinegar, per gallon	10 cts.
Vitriol, blue or Roman	25 per ct.
Walnuts, per lb	3 cts.
Waste, per lb	3 cts.
Watches, gold or silver	25 per ct.
Wearing Apparel. Same as "Clothing."	
Whiting, per lb	1 ct.
Do., ground in oil, per lb	2 cts.
Wines, champagne and sparkling, in bottles, shall not pay a less rate of duty than $6 per dozen bottles, each bottle containing not more than one quart and more than one pint, or $6 per two dozen bottles, each bottle containing not more than one pint.	
Wines of all kinds, valued at not over 50 cts. per gallon, per gallon. 20 cts. &	25 per ct.
Do., do., valued at over 50 cts. per gallon and not over $1, per gallon. 50 cts. and	25 per ct.
Do., valued at over $1 per gallon, per gallon	$1 and 25 per ct.
Wines, imported by any name whatever, subject to the highest rate of duty provided for the genuine article, and in no case less than	$1
Wines, when imported in bottles, to pay on each bottle, additional 2 cts.	
Wire, covered with cotton silk, &c., see "Iron."	
Wood pencils, filled with lead or other materials, per gross	50 cts. and 30 per ct.
Wood screws, two inches or over in length, per lb	8 cts.
Do., less than two in length, per lb	11 cts.
Wool, unmanufactured, and all hair of the alpaca, goat and other like animals, unmanufactured, the value of which at the last port or place from whence exported to the United States, exclusive of charges in such ports, shall be 12 cts. or less per lb., per lb.	3 cts.
Do., exceeding 12 cts. and not exceeding 24 cts. per lb., per lb	6 cts.
Do., exceeding 24 cts. and not exceeding 32 cts. per lb. per lb	10 cts. and 10 per ct.
Do., do., exceeding 32 cts. per lb., per lb	12 cts. and 10 per ct.
Do., any, or hair, as above, which shall be imported in any other than the ordinary condition, as now and heretofore practised, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any foreign substance, shall be subject to a duty of, per lb	12 cts. and 10 per ct.
Do., when different qualities of are imported in the same bale or bag or package, and the aggregate value of the contents shall be appraised by the appraisers at a rate exceeding 24 cts. per lb., per lb	10 cts. and 10 per ct.
Do., when bales of different qualities are embraced in the same invoice, at the same price, whereby the average price shall be lessened by more than 10 per ct., the value of the whole shall be appraised according to the value of the bale of the best quality; and no bale, bag, or package shall be liable to a less rate of duty in consequence of being invoiced with wool of lower value.	
Wool, increased in value by being scoured, in lieu of the duties as above three times the amount of such duties.	
Woollen cloths, and all manufactures of wool of every description, made wholly or in part of wool, not otherwise provided for, per lb.	24 cts. and 40 per ct.
Do., lighter, value over $2 per square yard, in addition to foregoing	5 per ct.
Woollen, clothing, see "Clothing."	
Do., blankets, see "Blankets."	
Do., Balmorals, see "Balmorals."	
Woollen shawls, same as "Woollen Cloths."	
Woollens, composed of worsted, and weighing over eight ounces to the square yard, same duties as woollen cloths.	
Do., endless belts or felts for paper, and blanketing for printing machines, per lb	20 cts. and 35 per ct.
Woollen, flannels, see "Flannels."	
Woollen yarn, value 50 cts., and not over $1 per lb., per lb	20 cts. and 25 per ct.
Do., do., value over $1 per lb., per lb	24 cts. and 30 per ct.
Do., do., for carpets, value less than 50 cts., and not exceeding in fineness No. 14, per lb	16 cts. and 25 per ct.
Woollen, children's and ladies' dress goods, wholly or in part of wool, worsted, mohair, alpaca or goats' hair, gray or uncolored, not exceeding in value 30 cts., per square yard, per square yard	4 cts. and 25 per ct.
Do., do., exceeding 30 cts. per square yard, per square yard	6 cts. and 30 per ct.
Do., do., stained, colored or printed, not exceeding in value 30 cts. per square yard, per square yard	4 cts. and 30 per ct.
Do., do., exceeding 30 cts. per square yard, per square yard	6 cts. and 35 per ct.
Do., all manufactures of wools or of which wool will be a component material not otherwise provided for, per lb	20 cts. and 35 per ct.
Woollen hats, per lb	24 cts. and 35 per ct.
Woollen shirts, drawers and hosiery, or do. of which wool shall be a component material, not otherwise provided for, per lb	20 cts. and 30 per ct.
Worsted bunting	50 per ct.
Worsted, manufactures of, or of which worsted shall be a component material, not otherwise provided for	50 per ct.
Worsted yarn, same as "Woollen Yarn."	
Yarn, hemp, per lb	5 cts.
Yarn, coir, per lb	1½ ct.
Yarn, flax or linen, see "Linen."	
Yarn, see "Woollens."	
Yarns, jute	20 per ct.
Zaffre	20 per ct.
Zinc, manufactured in blocks or pigs, per lb	1¼ cts.
Zinc, in sheets, per lb	2¼ cts.
Do., acetate of, dry or ground in oil, per lb	50 cts.

Grain Trade of Buffalo.

The eastward movement of the flour and grain from the west through Buffalo from January 1 to July 1, 1864, shows a decrease as compared with the corresponding period of 1863, of 379,997 barrels of flour and 4,433,889 bushels of grain. The Buffalo *Express* gives place to the following statement showing the imports of flour and grain into Buffalo by lake and the Buffalo and Lake Huron Railway during the past six months, as compared with the preceding years:

	Flour, bbls.	Grain, bush.	Grain, includ- Flour, bush.
1864	811,560	13,950,163	18,007,863
1863	1,191,557	18,384,055	24,351,834
1862	1,037,347	13,908,908	20,095,653
1861	598,491	11,598,164	14,590,610
1860	387,056	6,543,256	8,175,236

Grain Trade of Oswego.

The following will show the receipts of flour and grain at Oswego, by lake, from the opening of navigation to July 1, in the years indicated:

	1862.	1863.	1864.
Flour, bbls	111,079	53,845	22,129
Wheat bush	3,413,490	2,023,766	2,139,818
Corn, bush	1,195,953	986,362	299,610

The Special Income Tax.

REGULATIONS FOR ITS ASSESSMENT AND COLLECTIONS.

Secretary Fessenden has issued the following regulations for the assessment and collection of the Special Income Tax upon the income of 1863:

TREASURY DEPARTMENT,
WASHINGTON, July 2, 1864.

The joint resolution imposing a special income duty, approved July 4, 1864, provides that there shall be levied on the 1st of October, 1864, upon the gains, profits, or income for the year 1863, of all persons residing in the United States, or of citizens of the United States residing abroad, a duty of five per cent. on all sums exceeding $600. It is also provided that, in estimating income for this purpose, no deductions shall be made for dividends or interest received from any association, corporation, or company, nor shall any deduction be made for any salary or pay received.

In order to facilitate the assessment of this tax, assessors are directed to scrutinize carefully the returns of income heretofore made to them for the year 1863, by persons residing within the United States, and to select all such as have been made in detail, in the manner provided upon form No. 24, issued by the Commissioner of Internal Revenue, and with the accuracy and correctness of which they are thoroughly satisfied. When deductions have been made from any such return on account of dividends or interest received from any corporation, or on account of any salary or pay as an officer of the United States, the amounts thus deducted will be added to the amount heretofore assessed, and any income derived from interest upon United States securities will be included in the same total. The income thus determined may be entered in the list as the amount upon which the special duty of five per cent. is to be assessed.

Assessors will direct their assistants to procure returns from all persons residing in their several divisions who have heretofore made no return in detail, or with whose returns as heretofore made they have any reasons to be dissatisfied, and from the agents of all citizens of the United States residing abroad and belonging in their several divisions. Notice should be left with all such persons at least ten days before the 1st day of October, requiring them to make a return, under oath or affirmation, on or before said 1st day of October, in the manner provided by the act of June 30, 1864. By the terms of that act the return must state the sources from which the income is derived, whether from any kind of property, or the purchase and sale of property, rents, interest, dividends, salaries, or from any profession, trade, employment, or vocation, or otherwise. The distinction heretofore made between the incomes of residents and non-resident citizens is set aside, and the latter are to be treated in all respects in the same manner as the former.

Assistant Assessors will transmit the returns to the Assessors of their respective districts as rapidly as they are received, and in all cases within ten days after the 1st of October. If any person shall have neglected to give in a return in the form required, or if any person shall have given in a return which, in the opinion of the Assessor, is false or fraudulent, or contains any understatement or undervaluation, it will be the duty of the Assessor to summon such person, or his agent to appear and produce all books of accounts containing entries relating to the trade or business of such persons, and to summon any other persons as he may deem proper, to give testimony in the manner prescribed in section 14 of the act of June 30, 1864.

If upon such examination it shall appear that any person has made a false or fraudulent return, the assessor will estimate the income of such person according to the best information which he can obtain, and assess the duty thereon, and enter the same in the list, adding 100 per centum to such duty. The assessor will, in like manner, estimate the income of all persons who shall have neglected to make return on or before the first day of October, and assess the duty thereon, and, except in cases of sickness or absence, he will add 50 per centum to such duty. No return can be accepted which is not verified by oath or affirmation, and if any such return is transmitted to the assessor, he will proceed in the same manner as if no return had been received.

Immediately thereafter the assessor will make up an alphabetical list of all persons who have been assessed for the special income duty in each division of his district, and will then advertise in some newspaper published in each county of his district, if such there be—if not, in some newspaper nearest thereto in the same collection district—the time and place, within said county, when said list may be examined; and the list shall remain open for ten days for the inspection of all persons who may apply for the same.

No relief from assessments which are made after the examination of witnesses, as provided in section 14 of the act of June 30, 1864, can be given by the assessor; but any persons aggrieved will have a right of appeal to the Commissioner of Internal Revenue. In all other cases the assessor may revise any assessment, including those made upon the basis of returns heretofore received, at any time before the first day of November, 1864.

It is explicitly provided by the act of June 30, 1864, that copies of all lists returned to the collector shall remain in the office of the assessor, and shall be open to the inspection of all persons who may apply to inspect the same. It is of especial importance that assessors give full effect to this provision with reference to the lists heretofore made up, and containing the assessments upon the income for the year 1863, in order that the amplest opportunity may be given for the detection of any fraudulent returns that may have been made, and any omissions that may have occurred; and for this purpose, assessors should seek the co-operation of all tax paying citizens.

Assistant assessors will be particularly careful to obtain returns from persons employed in the service of the United States, whose names may not appear on the annual assessment list, as the special income duty upon their salaries, imposed by the joint resolution of July 4, is not to be withheld by paymasters, but must be assessed in the same manner as income from other sources.

Immediately after the 1st of November the lists made in accordance with these regulations will be returned to the several collectors in the manner provided by law, and the subsequent proceedings for the collection of the duty will be in all respects similar to those for the collection of taxes assessed in the annual list.

W. P. FESSENDEN, Secretary of the Treasury.

Cleveland, Columbus and Cincinnati R. R.

The earnings of this road for the year ending December 31, 1863, were as follows:

From passengers		$617,551 74
" freight		1,244,090 73
" express		35,983 56
" mail		31,243 00
" rents		84,086 17
" use of cars by other roads		18,114 46
" interest and dividends		119,823 80
" other sources		1,049 44
		$2,151,942 90

Expenses for operating the road:

Transportat'n expenses	$306,655 64	
General expenses	24,968 93	
Repairs of track	223,098 54	
" locomotives	70,923 78	
" cars	55,184 03	
" buildings	18,717 96	
" bridges	5,960 74	
" fences	3,929 18	
Fuel account	109,385 20	
Oil and waste	12,066 49	
Damages and gratuities	14,353 60	
Telegraph line	3,458 94	
Total working expenses	$848,703 03	
Duties and taxes	86,982 75	
		935,685 78
Net earnings		$1,216,257 12
Out of which a dividend of six per ct. was paid August 1	$299,772 00	
Also of five pr ct. Feb. 1	249,895 00	
		549,667 00
Leaving a surplus of		$666,590 12
To which add surplus of 1862		444,395 98
And also difference in value of Bellefontaine and Indiana and Indianapolis, Pittsburg and Cleveland R. R. Co., stock valued in report of 1862, at a nominal sum		201,674 91
Total surplus		$1,312,660 96
Deduct stock dividend 20 per cent.		999,580 00
Present surplus		$313,080 90
It might be proper to deduct from this surplus the value of certain bonds, which appear in the assets of the company at their par value, but which at this time have no determined value		163,399 80
Available and productive surplus		$148,681 16

Compared with the year 1862, the gross earnings show an increase of $427,025 97; with an increase in working expenses of $214,532 71. The per centage of expenses the past year has been 43.50; in 1862 it was 36.98—an increase of 6.57. The report says:

This increase is mainly due to the large advance in cost of material and labor, and also the increased business of the Road. It is also proper to state in this place, that the expenses of the Delaware and Springfield Branch is included in all accounts. The expense of maintaining Track for the year was largely in excess of the year 1862, both in material and labor. The following are the principal items for material:

451 Gross Tons, New Iron	$30,680 65
2,759 Gross Tons Re-rolled Iron	81,930 95
13,888 Repaired Rails	10,345 00
91,848 New Cross Ties	36,638 16
4,687 Chairs	2,708 20
218,033 lbs. Iron Joint Splices	10,250 59
235 Kegs Track Bolts and Nuts	4.902 77
824 Kegs R. R. Spikes	8,063 40
Frogs and Switches	10,000 00

Nearly three miles of new side track was laid during the year, including the stone-quarry track of one mile, at Berea, 4,000 feet at the new Stock Yards in Cleveland, and the balance on the Flats, at the new Freight House and Machine Shops. A new rail repair Shop was built at New London, working two fires.

Several of the stations are deficient in side-track room for passing trains conveniently.

Two new coal burning Locomotives were added to the equipment, one delivered in January and one in March. One Locomotive was sold to the Government in October, on a requisition from the Superintendent of Government Military Railroads, and one small Engine, not serviceable in our business, was sold to a Coal mining Company. The Company now own 47 Locomotives in all. Two of them are not fit for service, and have been condemned, as it will not pay to rebuild them. Several of the old class will require extensive boiler renewals, the coming year in addition to other general repairs. The service for the year was as follows:

Passenger service	280,071	miles.
Freight "	491,328	"
Fuel "	40,140	"
Graveling and repair service	48,894	"
Switching Service	151,702	"
	1,012,130	"

Increase over 1862, 85,502 miles.

Cost per mile run for repairs, 7 cents.

In addition to ordinary repairs, renewals were made and charged in repairs for three new tanks and tenders complete for one Passenger and one Freight Engine, and four new fire boxes. Also two new boilers for Freight Engines building. Two Freight engines were changed from wood to coal burners. The Company have now six coal burning Freight Engines working and two more nearly completed.

It is confidently expected that the completion of the new Repair Shops, the coming season, will enable the Company to economize repairs, and also give ample room for building new locomotives, as fast as required by depreciation and increased business.

The fuel account shows a large increase over former years. The increased mileage will account for it, but it is mainly due to the large advance in prices of wood and coal. 35,000 cords of wood and 5,000 tons of coal were consumed in transportation of Freight and Passengers.

The Freight equipment of the Road has been kept in good repair. 134 new House Cars and 45 platforms were added to the stock during the year. Six stock and five house cars sold the U. S. Government. Ten of our stock cars were changed to platforms. The number of cars December 31st was as follows: House Cars, 511; Stock Cars, 107; Platform Cars, 169—Total, 787.

An increase of 161 over the previous year. We were unable, with the increase, to supply the demand promptly.

The Passenger equipment was not fully maintained, owing to the increased demand for Government Transportation of troops and an increased passenger traffic. One first-class car was broken up and three sold to the Government. One new Baggage Car was built in the Company's Shops.

The number of Cars December 21st, was: First class, 24; second class, 4; mail and express, 3; baggage, 6.

It is expected that the enlargement of the Car Shops will enable the Company to build, the coming year, passenger equipment sufficient for the requirements of business.

The only addition to buildings on the line, is the new Rail Repair Shop, and Engine House for Boiler and Engine, at New London, for pumping water for Station, and running the blower for the shop, the expense being divided between repairs to track and building repairs. The water stations have required extensive renewals and increase in tubs, as also the enlargment and deepening of the wells.

Extensive renewals to platforms at Stations and repairs of Station buildings were also made during the year. The Piers and Buildings at Cleveland received extensive repairs.

There has been expended during the year for new Shops, Engine-House, Depots, Depot grounds and Track, $163,995; New and additional cars and engines, $102,160; Wood Lands, $28,000; Columbus, Piqua and Indiana (endorsed) bonds redeemed, $61,000; Bellefontaine and Indiana Railroad stock purchased, $201,995—Total, $552,150.

Number of through passengers carried, 59,268; way, do., 275,525; excursions at half-fare, 11,839; soldiers, 47,618; miscellaneous, 1,600—total, 395,850. Total passengers carried one mile, 25,597,400. The average rate received per mile was 2.41 cents. Tons of freight transported, 607,063. Do. carried one mile, 58,358,269.

The Assets and Liabilities of the Company are as follows:

ASSETS JANUARY 1, 1864.

American Railroad Journal.

Saturday, August 13, 1864.

Stock Exchange and Money Market.

"If the country is fated to be governed by lawyers, in all its departments, perhaps MR. FESSENDEN is as good a choice as may be made.

He has, however, a terrible task before him, to assume what may be called the *debris* of the splendid patrimony of the country, which, with *carte blanche*, was put into MR. CHASE's hands, but has, with his manipulation, been so wasted as to leave the nation now, we might almost say, in a state of bankruptcy.—*Hunt's Merchants' Magazine.*"

We confess to considerable astonishment on reading the above extract from a late number of the *Merchants' Magazine*, not HUNT's as is supposed by some people, for the astute person who once conducted that periodical under his own name has long since paid the debt of nature, but another's, who by purchase stepped into the shoes of a really clever man. If the Country is "fated to be governed by lawyers," then it is because these persons are forever pushing themselves forward into positions to which they are not always competent, whether in politics, or as teachers of merchants, and judges in political economy and finance. Yet it must be admitted they are sometimes very brilliant in other departments than those of the law, as in the instance of our first Secretary of the Treasury, Alexander Hamilton, the father of our financial system, and one of the ablest men of his day. But what we notice with still more surprise is the statement that follows, viz. that the present Secretary MR. Fessenden, is called upon "*to assume* the *debris* of the splendid patrimony of the Country." *Assuming* the *ruins* of anything is no doubt a very difficult performance, and though a figure of speech which does not give us a very high idea of the literary merit of its author, is intelligible in connection with the assertion following, viz. that the splendid "*patrimony*" of the country was put with carte blanche into Mr. Chase's hands, and that he has wasted it and the nation is now in a state of bankruptcy.

We undertake to say that this statement is wholly destitute of foundation. The patrimony of this country was never put into Mr. Chase's hands at all. The goods and chattels, lands and tenements, the soil, the acres, the cities, towns, rivers, lakes, canals, railways and everything else which make up the wealth of the nation remain just where they did, and are this day worth more money whether in gold or currency than they were when the rebellion broke out. As yet, this patrimony has scarcely felt the weight of taxation, the taxes having been tardily imposed by Congress, and more tardily collected. The capital has not been touched; it is the credit of the patrimony based on its enormous wealth and resources, which has alone been used. That it has been used in all respects in the discreetest manner is what we are not disposed to affirm, nor do we suppose that any perfection of discretion could have been expected from any other Secretary of the Treasury, for the war was a surprise, a calamity; we could scarce believe there were any Americans, who could be so false to the country, and the constitution they had so often sworn to defend and preserve, as thus to attempt their destruction. Our wisest public men did not comprehend the extent of the treason, nor the greatness of the danger.

The idea of raising a million of soldiers, and seventeen or eighteen hundred millions of dollars to carry on the war for our Nationality, did not enter into the minds of any member of the administration, nor of the President himself, nor would it probably have been received with much favor by the people themselves. The finance of the country was affected by the doubt as to the character and duration of the struggle. Mr. Seward and Mr. Chase both considered it would be a short one, and wrote and financiered accordingly, and if there were any great and sagacious men in Congress, they did not show themselves, for its legislation was no more far seeing than was that of the administration of the Government. Very great allowances were therefore to be made for any financial minister who was called on to provide vast and unusual sums of money in a country which was totallyunaccustomed to taxation and a national debt, and to have succeeded, without having wasted or even touched the patrimony of the country, is a proof of extraordinary ability. We are not

speaking of the varieties of securities designed by the Treasury, nor of their tenor, nor of their interest, about which there has been great difference of opinion, and about which Mr. Chase might be easily mistaken like any other man. What we mean to say and maintain is, that as he found the expenditure of money became greater and greater by the Departments of Government, which took no thought nor care of how it was to be met, the Secretary grasped the real position of the country and its affairs, and secured without any difficulty the funds he required, while he retained the confidence of the people from whom he obtained them, in a manner unprecedented in history. It is not in the manipulation or details of his loans that Mr. Chase was so much to be admired, but in the conceptions realised of the difficulties before him, and his unexampled success in overcoming them. No other Secretary of the Treasury was ever before able to state a year in advance what was to be the debt of the nation on a particular day, and the cleverest guesser could not have done so unless his books and accounts were all in the best condition.

A reply to the unjust and unfair criticism of the *Magazine* referred to, can perhaps be best made in the following extract from the *London Morning Star*, a journal which has the promptings of JOHN BRIGHT, and good and great men like him:

To lay the responsibility of the war expenditure upon Mr. Chase, as if he had created the necessity for his own measures, in place of merely providing the means to enable his country to meet a crisis, and to stigmatise him as the destroyer of the national prosperity of his country, and a mighty master in the art of ruin, is most unjust to a statesman of unquestionable ability and high character.

The best answer to the croaking prophets of evil who are constantly uttering these doleful vaticinations is to quote the language of Lord Macaulay in relation to the contracting of debt by his nation. He says:

"At every stage in the growth of that debt it has been seriously asserted by wise men that bankruptcy and ruin were at hand. At every stage of the growth of that debt the nation has set up the same cry of anguish and despair. Yet still the debt went on growing, and still bankruptcy and ruin were as remote as ever." And he adds: "The beggared, the bankrupt society not only proved able to meet all its obligations, but while meeting them grew richer and richer so fast that the growth could almost be discerned by the eye."

"Mr. Chase having been called suddenly to provide for the means to carry on a war of stupendous magnitude, adopted the method of obtaining on the credit of his Government the amounts which it was vain to expect from any other source. Such is the financial crime for which he is held up to odium or ridicule in England at the very moment that a loan bill is passing through parliament to provide a million sterling for carrying on a trumpery war against a handful of Maories in New Zealand! It is true that Mr. Chase was compelled to borrow money and issue greenbacks, but he at least confined his operations to his own country. He did not come to England for gold to pay his soldiers, or to satisfy the rapacity of those who in all countries and in all ages have followed in the wake of armies."

The *Star* comprehends what the *Merchants' Magazine* is unable to comprehend, and we submit whether it can claim of its countrymen their further confidence, after so weak and uncalled for criticism as that to which we have directed the attention of our readers to-day.

From this doleful picture let us turn to a brighter one with much more of a truthful element in its composition.

In the first place the public mind has recovered its equanimity since the temporary disaster at Petersburg. In the meantime General Grant continues to execute his purpose, reminding us of the persistency and resolution of Gen. Jackson.

"Patient of toil, serene amidst alarms,
Inflexible in faith, invincible in arms."

The operations in Maryland have also assumed a more promising form, under his immediate direction, and his able subordinate Gen. Sheridan. Those in Georgia appear to be approaching a finale, certain to be expected, as an inevitable checkmate, which the lookers on observe more clearly than the players themselves. The army in Atlanta has been reduced by the recklessness or bravery of its commander, full one half in numbers, and now to this misfortune is added the destruction of the rebel fleet in Mobile Bay. So much for the military position.

The receipts from internal revenue now average one million of dollars per day, and from all other loans and customs sources, two millions per day. So that just as soon as the war closes, the Treasury will want no more loans, but will be able to manage from its receipts and place the securities of the country on the firmest condition. And the country has only to stand by its flag a few months longer and resist all attempts to break up the Union, now no longer possible except by treachery and cowardice on our part, and the people will wake out of a dream of fearful apprehensions into the full consciousness of new life, strength, greatness and happiness. Let not the people be deceived by the persistent and fraudulent efforts made to them by journals, in the interest if not the pay of the rebellion; for in all countries there are men who will for a price betray their countrymen, and are constantly assailing their financial policy no matter who is at its head. And here we would notice that Mr. Fessenden has not escaped the censure of those critics who place themselves in charge of the public credit and the public securities. Mr. Fessenden has been gravely censured for leaving his post in this time of danger.

Mr. Fessenden went home on private business of a most imperative character after a long absence, and if he made time to do so, it shows that he is by no means in any such strait as is pretended. They are poor observers who do not perceive that by this very act of relaxation on the part of Mr. Fessenden, he feels that he is master of the situation, as beyond all question he is.

All the money wanted to put down this rebellion, and to save the life of this republic, is sure to come. But what we would particularly notice in this connection, is the fact that instead of an expansion of issues *there has been actual contraction of over fifty millions*, from the maximum of last Spring:

	April.	August.
Greenbacks	$449,300,202	$433,166,553
Legal tender 5s, coup'ns	150,000,000	89,993,602
Legal tender 5s, plain	61,000,000	61,000,000
Legal tender 6s, comp'd		82,883,760
Total legal tenders	$660,300,202	$608,043,915
Decrease since April		$52,256,287

This total includes the currency of all denominations, even of the 6 per cent. compound Treasury notes. It is very remarkable that while we have newspapers among us which are resolved to destroy our currency, and damage our National credit as much as possible, the leading journals of England are congratulating themselves on the flourishing condition of their trade with us, its value to them, and the consumption of the country to which in the words of the London *Star*, they must continue "to look for a large portion of the food of our people."

The money market is not very active. Seven per cent is the rate to borrowers on ordinary security, but on the best collaterals it is said only five is paid. Foreign Exchange is dull, and is at about par for gold, but sellers are offering it on credit, so as to make up in interest what they cannot get in premiums. It is charged in a morning cotemporary, that the English agencies pursue a persistent policy of keeping most of their balances on the other side. They are willing, individuals and companies, to make as much money as possible in the United States, but will do not the least thing to forward our political or financial interests. This conduct is unjustifiable on the part of those agents who are accumulating fortunes in this country, which by no possibility would be within their reach at home. The sale of the 7-30s is increasing daily, averaging a million a day. This with the receipts from customs and revenue would be equal to three millions a day, and this if continuing for the year, would give the Government, the enormous sum of nine hundred millions and more per annum. Where is the sceptic or enemy who after such an exhibition of the credit and resources of the country dares doubt of its inherent greatness and power.

The share market is firmer, but railway securities are evidently not bringing their value as compared with other commodities. Our tables will show accurately their condition during the past week. The demand for Governments is improving. The Sub-Treasury showed a balance on Tuesday of $17,490,133.

The aggregate value of the exports of produce and merchandise, exclusive of specie, from this port during the past week was $6,468,846. The exports of the previous week amounted to $8,236,012.

The Boston imports for the week ending August 5 were $204,454, against $366,032 for the corresponding week in 1863. The exports were $361,816, against $109,219 64 for the corresponding week in 1863.

The foreign exports from the port of Baltimore during the past week amounted to $47,598.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Illinois coupon bonds, 1870, 101; Inbiana 5s, 90; North Carolina 6s, 60; Brooklyn City Water Loan, 116½; Atlantic and Gt. Western (Ohio div.) 1st mort., 100; Peninsula R. Immigration.

It is with little patience that we read some of the leading journals which come to us from English or French presses. The persistence with which everything American is distorted and misrepresented, to shake the confidence of the people of Europe in our progress and prosperity, is naturally enough giving rise to a deep-seated feeling of resentment. Our military position offers the most tangible object of attack at present; but new attempts are being made to discourage emigration, which offers us just what we most want additional labor. It is no longer asked by these detractors: Who reads an American book? for American books and American authors have made their way to world wide renown in spite of the sneers of the foreign reviewers.

The "bit of bunting" at the mast head of "a fir built frigate," now flies at the mast heads of more than six hundred ships, many of them iron clad and impregnable. In the British channel, it has been recently demonstrated that the men who defend it have lost none of their skill or valor. American machinery is shipped to all parts of the world, as being the most ingenious and effective of any in use. Our cotton gins convert an article of modern production into almost the value of coin of equal weights; our sewing machines have emancipated the hard working seamstresses of every land, and brought them into a thriving and prosperous condition. Our agricultural implements are preferred in all forests for clearing them away; our ploughs take the lead for their lightness, strength and ease of management wherever the soil is to be upturned; our inventions are constantly reproduced in all civilized countries, and our patent laws and patent office have just been pronounced by a special British commission sent to examine them, superior in all respects to their own. Even our cannon are found to be more effective than any other ordnance in use, and are being imitated in foreign foundries, and feared by foreign enemies. In short, in all that we undertake, we are second in mechanical contrivance to no other people, and in most things are indisputably *primus inter-pares*, the first among our peers.

Is it strange that as these facts come to the knowledge of the real people of the old countries, they should show a strong interest in our career, or a desire to come to us and share our lot; to partake of our material prosperity, and rise with us to competence and happiness. At the present moment, these favorable opinions are strengthened by the reports which have reached the other side of the water, with regard to the increased prices paid for labor, and agricultural laborers and machine operators are naturally attracted here by the wages they are able to earn in the United States with ten hours daily work.

Notwithstanding the acres of our improved land in 1860, (the date of the last census,) amounted to 163,261,389, the unimproved were 246,508,244, and among the latter is to be found our most fertile and productive soil. By the homestead law passed by Congress, every actual settler may obtain a farm and homestead of 160 acres for nothing; a liberality no other nation has ever yet shown to its own or to foreign people. In the same year, 1860, the products of our manufacturing establishments were $1,900,000,000, and all these require a constant supply of experienced workmen. Our coal mines are so prolific and are so well worked under an increasing demand, that their profits allow the proprietary companies to pay such wages as were never before known. In Pennsylvania, we are informed that four hundred dollars per month have been recently paid to the best miners.

As these facts become known in Europe, the consequences are inevitable, and though the foreign newspapers are not very much disposed to give them publicity, there is a channel of information which they cannot cut off, and this is the mails. Notwithstanding the high rate of ocean postage which should be reduced to as low a rate as possible, and at the earliest opportunity by our Government, thousands of letters continually reach Great Britain and Germany which tell the truth, and are answered by foreign correspondents in person. Thus emigration has always been constant and large to this country, but it is increasing in a still more remarkable manner. Two hundred and forty-eight thousand have landed on our shores during the present year. The class of immigrants is of a better and more desirable character than

has been usual. Wages even when reduced to the standard of gold and silver are as a rule, three or four times greater than in any part of Europe, in the same employments, and while the expense of living is somewhat enhanced by the war and the currency, there are a vast many articles which are not proportionally enhanced in price, and those who are able to use their own hands, or those of their sons and daughters even for a short time, and raise what they eat from their own land, are perfectly independent of most of this advance in prices. At the present moment there is no class of persons who are so prosperous, and who are so little directly taxed as our farmers.

As our institutions favor individual liberty and choice of labor, there being no prescriptive rights such as those of Guilds, which so control in Europe the direction of most artizan work, there is room for every emigrant who comes here to exercise his calling without a hindrance from any corporation or authority, and the population of the country is increasing so fast, that the consumption for each possible variety of human industry must go on with renewed force. The annual increase of the United States since 1790, has been four times as great as that of Russia, six times as great as that of Great Britain, nine times as great as that of Austria, and ten times as great as that of France. If the ratio of increase of our population from 1840 to 1850, should continue to 1890, and there is no reason to doubt it, for the amount of emigrants since the war commenced has been more than double our actual losses in the field, and going on the present year in a ratio unprecedented in former periods, we shall in that year have a population of one hundred and three millions of people. And if we retain our liberties and our Union, we shall present a spectacle of individual and national prosperity such as the globe has never yet witnessed. And as all this labor will be free, and honorable, it is plain to be seen that no other form of industry or labor of an involuntary character can maintain itself on the same soil in antagonism of any kind. Let those who believe in the strength of present political minorities calculate what they will amount to in competition hereafter of war or peace with such a population as shall then exist in this country.

The following interesting table shows the occupations of the immigrants who came to our shores to reside with us from 1820 to 1860, only forty years:

Merchants, 231,852; farmers, 764,837; mechanics, 407,524; mariners, 29,484; miners, 39,967; laborers, 872,317; shoemakers, 3,474; tailors, 3,634; seamstresses and milliners, 5,246; actors, 588; weavers and spinners, 11,557; clergymen, 4,326; clerks, 3,882; lawyers, 2,676; physicians, 7,109; engineers, 2,016; artists, 2,490; teachers, 1,528; musicians, 729; printers, 705; painters, 647; masons, 2,310; hatters, 256; manufacturers, 3,120; millers, 631; butchers, 945; bakers, 1,272; servants, 49,494; other occupations stated, 26,206; others not stated or known, 2,978,599—total, 5,459,421.

Our foreign readers will be able to perceive from this list, how various is the field of employment open to immigrants.

And yet there are specialities not included in this list by name, which are quite as important. We mean of metallurgists, vine growers, and silk spinners and weavers. Indeed there is open a large opportunity in many of the arts which has not been taken advantage of by skilled artizans from abroad.

In the full confidence of more prosperous and peaceful times, in view of the high prices of labor, not likely for some years to be reduced, and of the immense social and political advantages which every respectable and industrious emigrant may obtain for himself and his family, with his entire exemption from military duty in the Northern and Western States, we can only express our astonishment that every man, woman and child in the old world, who is not fully as successful and happy in its state and prospects as he or she may desire or deserve, should not at once join the caravan of hopeful pilgrims who are now hastening annually to the promised land, where food, land, wages, clothing and liberty are at the absolute command of all the industrious and virtuous of mankind.

Interest and Dividends.

The Northern Central Railroad Company has declared a dividend for the quarter ending June 30th of 2 per cent, free of National and State taxes, payable on the 25th of August.

The Chicago and Alton Railroad Company will pay August 20, a dividend of three and a half per cent, free of tax, on the preferred and common stock; also a dividend of two and a half per cent on the common stock, in lieu of the dividend deferred in January.

The Shamokin Valley and Pottsville Railroad Company have declared a dividend of one and a-half per cent., free from State tax, payable on demand.

The Cleveland and Toledo Railroad Company have declared an extra dividend of ten per cent., free of Government tax, to be paid to the stockholders on the 20th day of August, at the Continental Bank, New York, until the 20th day of September, and after that date at the Company's office in Cleveland.

The Oswego and Syracuse Railroad Company will pay, 20th August, its Twenty-second semi-annual dividend of four per cent., free of tax.

The Naugatuck Railroad Company have declared a half-yearly dividend of five per cent., free from Government tax, payable 15th inst.

The Delaware Division Canal Company of Pennsylvania, have declared a dividend of three per cent. on their capital stock, clear of all taxes, payable August 15th.

The Pacific Mail Steamship Company have declared a dividend of five per cent. out of the net earnings of the last three months, payable on the 17th instant.

The Quincy Mining Company have declared a dividend of eight dollars per share from the earnings of the past six months, payable on and after Monday, the 15th of August next.

The Briggs Gold Company have declared a dividend of one per cent. for the month of July, payable Aug. 16th.

The Gould and Curry Silver Mining Company has declared a dividend for July of fifty dollars per foot in gold, payable at the office of Eugene Kelly & Co., No. 36 Wall street.

The Hampshire and Baltimore Coal Company will pay, 15th inst., a semi-annual dividend of 5 per cent., free of tax.

The Pennsylvania Coal Company will pay, 12th August, a dividend of 7½ per cent.

The Union Petroleum Company announces its fourth monthly dividend of two per cent., payable on the 16th instant.

The United States Petroleum Company will pay 15th inst., a quarterly dividend of 3 per cent, free of tax.

The McClintock Petroleum Company, a fourth monthly dividend of one per cent., payable August 6th.

The Story & McClintock Petroleum Company will pay, 15th inst., a dividend of one per cent. for the month of July.

☞ Mr. Henry L. Pierson has been elected Director of the Erie Railroad Company to fill a vacancy.

Railroad Earnings--Weekly.

The earnings of the Marietta and Cincinnati Railroad for the 4th week in July:

	1864.	1863.
Passengers	$18,043 51	$30,960 44
Freight	12,812 27	6,322 19
Mail, express & telegraph	808 63	895 27
Total	$31,664 41	$38,177 90
This month to date	$89,533 52	$58,704 07
Total since Jan. 1	$546,936 48	$351,563 10

The traffic of the Great Western Railroad for the week ending July 29, 1864, was as follows:

Passengers	$22,212 78
Freight and live stock	20,477 47
Mails and sundries	1,202 87
Total	$43,893 12
Corresponding week of 1863	43,371 93
Increase	$521 19

The earnings of the Chicago and Alton Railroad Company for the week ending July 31, were:

	1864.	1863.
Passengers	$18,789 88	$14,182 22
Freight	34,460 43	28,354 92
Sundries	2,231 69	1,374 61
Total	$55,472 00	$43,911 75
Increase 1864		$11,560 25

The earnings of the Grand Trunk Railway for the week ending July 30, 1864, were... $91,002 51
Corresponding week, 1863 ..... 75,631 69
Increase $15,370 82

The Company are now working the Buffalo and Lake Huron line, which, by an agreement between the two Companies, passed into the hands of the Grand Trunk Company on the 1st of August.

Railroad Earnings--Monthly.

The following shows the gross receipts of the Chicago and Alton Railroad during the month of July, compared with the earnings for the same time last year:

July, 1864	$215,680 05
July, 1863	164,102 35
Increase	$51,577 70

The earnings of the Hudson River Railroad for the month of July, 1864, were..... $273,726 03
Corresponding month of previous year 190,363 87
Increase $83,362 16

The earnings of the Michigan Central Railroad for the month of July, 1864, were ... $263,244 00
Corresponding month of previous year 193,328 00
Increase $69,916 00

The earnings of the Chicago and Northwestern Railroad for the month of July, were: $482,054 00
Same period last year 275,506 00

Increase $206,548 00

The earnings of the Dubuque and Sioux City Railroad Company for the month of July, 1864, were $28,606 53
Corresponding month of previous year 14,582 76

Increase $14,023 77

The earnings of the Milwaukee and St. Paul Railway for July, 1864, were $168,307 00
Corresponding month of previous year 105,397 00

Increase $62,910 00
From Jan. 1, 1864, to 31 July. $1,108,279 00
From Jan. 1, 1863, to 31 July. 787,066 00

Increase $321,213 00

The earnings of the Cleveland and Toledo Road for July, 1864, were $113,515 00
Corresponding month of previous year 91,308 00

Increase $22,207 00

The earnings of the Philadelphia, Wilmington and Baltimore Railroad Company for June, 1864, were $262,366 86
Corresponding month of previous year 199,304 85

Increase $63,062 01
For six months from Jan. 1, 1864 ... $1,614,786 01
" " " " 1863 ... 1,285,766 61

Increase $279,109 40

The business of the Illinois Central Railroad for the month of July, 1864:

LAND DEPARTMENT.

Acres construction lands sold	13,887.36	for	$147,694 91
Acres Interest Fund Land sold	595.80	"	8,155 64
Acres Free Lands sold ..	3,775.52	"	40,704 09
Total sales during month of July, 1864	18,258.68	for	$196,554 65
To which add town lot sales			3,574 50
Total of all			$200,129 14
Acres sold since Jan. 1, 1864	163,473.82	for	$1,737,270.89
Cash collected in July.			$175,758 36

TRAFFIC DEPARTMENT.

Receipts from passengers	$127,667 80
" freight	260,170 85
" mails	6,358 33
" rent of road	4,000 00
" other sources	6,000 00
Total receipts in month of July, 1864 .	$404,196 08
Total receipts in month of July, 1863 .	343,928 61
Increase	$90,268 37

The earnings of the Milwaukee and Prairie du Chien Railroad for the month of July, 1864 were $139,547 00
Corresponding month of previous year 71,587 00

Increase (over 90 per cent) $67,960 00

The earnings of the Rome, Watertown and Ogdensburgh Railroad for the month of July, 1864 were:

	1863.	1864.
From passengers	$25,450 55	$33,119 62
" freight	22,341 99	36,153 09
" other sources	1,681 15	2,029 84
Total	$49,673 69	$71,302 55
Increase 1864		$21,628 86

The earnings of the Michigan Southern and Northern Indiana Railroad for the month of July, 1864, were $279,129 00
Corresponding month of previous year 188,141 00

Increase $90,088 00

The earnings of the Chicago and Rock Island Railroad Company for the month of July, 1864, were $195,103 60
Corresponding month of previous year 140,563 00

Increase $54,535 00

Liability of Company for Injuries Occurring within the Limits of their Track.

The right of parties to use or walk within the limits of a railroad track has been a fruitful source of litigation. The law, however, is now pretty well settled, that the use of a railroad track, cutting or embankment, except at lawful crossings of public roads or highways, is exclusively for the company and their employees; and a person on such track is where he has no right to be, and if he sustains an injury by being there, the said road company are not liable, where want of ordinary care by the company is not shown.

What is ordinary care and what is negligence are inquiries, in most cases, to be answered by a jury; but negligence is not to be found without evidence. There is always a presumption against it, and therefore a plaintiff who asserts it and avers that he has received an injury in consequence of it, must adduce proof that the defendant did not exercise ordinary care. These principles are fully sustained by the case of the Philadelphia and Reading Railroad Company *vs.* Hummell, in the Supreme Court of Pennsylvania, lately decided. In that case the accident by which the party was injured occurred on a railroad, not at any street or crossing, but where neither the plaintiff nor any other persons, except the agents of the railroad company had any right to be.

Judge STRONG, in delivering the opinion of the court says:

It is time it should be understood in this State, that the use of a railroad track, cutting or embankment, is exclusive of the public everywhere, except where a way crosses it.

This has more than once been said, and it must be so held, not only for the protection of property, but what is far more important for the preservation of personal security, and even of life. In some other countries it is a penal offence to go upon a railroad. With us, if not that, it is a civil wrong of an aggregated nature, for it endangers not only the trespasser, but all who are passing or transporting along the line.

As long ago as 1852, it was said by Judge Gibson, with the concurrence of all the court, that "a railway company is a purchasery in consideration of public accommodation and convenience of the exclusive possession of the ground paid for to the proprietors of it, and of a license to use the highest attainable rate of speed, with which neither the person nor property of another may interfere."

The company on the one hand, and the people of the vicinage on the other, attend respectively to their particular concerns, with this restriction of their acts, that no needless damage be done.

But the conductor of a train is not bound to attend to the uncertain movements of every assemblage, of those loitering or roving cattle by which our railways are infested. Railway Company *vs.* Skinner, 7 Harris, 298. So in Railroad *vs.* Norton, 12 id., 465, it was said, "That until the Legislature shall authorize the construction of railroads for something else than travel or transportation, we shall hold any use of them for other purposes to be unlawful, if not indeed a public offence punishable by indictment."

But if the use of a railroad is exclusively for its owners, or those acting under them; if others have no right to be upon it; if they are wrong-doers whenever they intrude, the parties lawfully using it are under no obligations to take precautions against possible injuries to intruders upon it. Ordinary care they must be held to, but they have a right to presume and act on the presumption that those in the vicinity will not violate the laws; will not trespass upon the right of a clear track; that even children of a tender age will not be there, for though they are personally irresponsible, they cannot be upon the railroad without a culpable violation of duty by their parents or guardians. Precaution is a duty only so far as there is reason for apprehension. No one can complain of want of care in another where care is only rendered necessary by his own wrongful act.

It is true that what amounts to ordinary care under the circumstances of a case is generally to be determined by the jury. Yet a jury cannot hold parties to a higher standard of care than the law requires, and they cannot find anything negligence which is less than a failure to discharge a legal duty. If the law declares, as it does, that there is no duty resting upon any person to anticipate wrongful acts in others, and to take precaution against such acts, then the jury cannot say that a failure to take such precautions is a failure in duty and negligence. Such is this case. The defendants had no reason to suppose that either man, woman or child, might be upon the railroad where the accident happened. They had a right to presume that no one would be on it, and to act upon the presumption.

Blowing the whistle of the locomotive, or making any other regard, was not a duty owed to the persons in the neighborhood, and consequently the fact that the whistle was not blown, nor a signal made, was no evidence of negligence.

Were it worth while, abundant authority might be cited to show that the law does not require any one to presume that another may be negligent, much less to presume that another may be an active wrong-doer. The principle was asserted in Brown *vs.* Lynn, 7 Casey 510, and in Reeves *vs.* The Delaware, Lackawanna and Western Railroad Company, 6 id., 454. It is too well founded in reason, however, to need authority. We act upon it constantly, and without it there could be no freedom of action.

There is as perfect a duty to guard against accidental injury to a night intruder into one's bed chamber, as there is to look out for trespassers upon a railroad where the public has no right to be.

And the rule must be the same whether the railroad is in the vicinage of many or few inhabitants. In the one case as in the other, going upon it is unlawful, and therefore need not be expected.

In this case it appears that there are fifteen houses between the railroad and the public high-

way, all but two of them built since the railroad was constructed. The danger of trespassing may have been increased by the increase of the population, but the standard of duty in the use of one's property is not elevated or depressed by a varying risk of unlawful intrusions upon his rights.

Of course we are not speaking of the duties of railway companies to the public at lawful crossings of their railways.

We refer only to their obligations at points where their right is exclusive; and as we find no evidence of any negligence of the defendants which caused an injury to the plaintiff, we think the jury should have been so instructed, and the third and fifth points of the defendant should have been affirmed.

Judgment reversed, and a new *venire* ordered.

The New Government Loan.

SECRETARY FESSENDEN'S APPEAL TO THE PEOPLE.

Accompanying Secretary Fessenden's announcement of the new loan, which we publish elsewhere, is an appeal to the people of the United States. It says:

The circumstances under which this loan is asked for, and your aid invoked, though differing widely from the existing state of affairs three years ago, are such as afford equal encouragement and security. Time, while proving that the struggle for national unity was to exceed in duration and severity our worst anticipations, has tested the national strength and national resources to an extent alike unexpected and remarkable, exciting equal astonishment at home and abroad. Three years of war have burdened you with a debt which but three years since would have seemed beyond your ability to meet. Yet the accumulated wealth and productive energies of the nation have proved to be so vast that it has been borne with comparative ease, and a peaceful future would hardly feel its weight, as a price paid for national existence and the preservation of free institutions. It does not deserve a moment's consideration.

Thus far the war has been supported and carried on as it only could have been by a people resolved, at whatever cost of blood and treasure, to transmit unimpaired to posterity the system of Free Government bequeathed to them by the great men who framed it. This deliberate and patriotic resolve has developed a power surprising even to themselves. It has shown that in less than a century a Nation has arisen, unsurpassed in vigor and exhaustless in resources, able to conduct, through a series of years, war on its most gigantic scale, and finding itself, when near its close, almost unimpaired in all the material elements of power. It has, at the present moment, great armies in the field, facing an enemy apparently approaching a period of utter exhaustion, but still struggling with a force the greater and more desperate as it sees, and because it sees the near approach of a final and fatal consummation. Such, in my deliberate judgment, is the present condition of the great contest for civil liberty in which you are now engaged. Up to the present moment you have readily and cheerfully afforded the means necessary to support your Government in this protracted struggle. It is your war. You proclaimed it, and you have sustained it against traitors everywhere, with patriotic devotion unsurpassed in the world's history. The securities offered are such as should command your ready confidence. Much effort has been made to shake public faith in our national credit, both at home and abroad. As yet we have asked no foreign aid.

Calm and self-reliant, our own means thus far have proved adequate to our wants. They are yet ample to meet those of the present and future. It still remains for a patriotic people to furnish the needful supply. The brave men, who are fighting our battles by land and sea, must be fed and clothed. Munitions of war of all kinds must be furnished, or the war must end in defeat and disgrace. This is not the time for any lover of his country to inquire as to the state of the money market, or ask whether he can so invest his surplus capital as to yield him a larger return. No return and no profit can be desirable if followed by national dissolution or national disgrace.

Present profit thus acquired is but the precursor of future and speedy destruction. No investment can be so surely profitable as that which tends to insure the national existence. I am encouraged in the belief that by the recent legislation of Congress, our finances may soon be placed upon a sounder and more stable footing. The present deranged condition of the currency is imputable in a great degree to the disturbances arising from the withdrawal of necessary checks often inevitable in time of war, when the expenditures must largely exceed any possible supply of coin.

The opportunities thus presented to acquire sudden wealth have led to vicious speculation, a consequent increase of prices, and violent fluctuation. The remedy is to be found only in controlling the necessity which begets the evil. Hitherto, we have felt the need of more extensive and vigorous taxation. Severe comment has been made upon what seemed to many timidity and tardiness of action on the part of Congress in this regard. I deem it but just to say that very great misapprehension has existed, and perhaps still exists, upon this point.

Legislators, like all others, have much to learn in a new condition of affairs. An entirely new system was to be devised, and that system must necessarily be the growth of time and experience. It is not strange that the first efforts should have proved imperfect and inadequate. To lay heavy burdens on a great and patriotic people in such a manner as to be equal and so as to occasion the least amount of suffering or annoyance requires time and caution, and vast labor; and with all these experience is needful to test the value of the system and correct its errors.

Such has been the work that Congress was called upon to perform. I am happy to say that daily results are proving the Internal Revenue act to exceed in efficiency the most sanguine expectations of its authors. For the month of June, 1863, it yielded about $4,500,000, while the corresponding month of this year returned about $15,000,000 under the same law, which went into operation on the first day of the present month, the Treasury frequently receives $1,000,000 in a single day.

As time and experience enable the officers employed in collecting the revenue to enforce the strength of the provisions of the new law, I trust that a million per day will be found the rule and not the exception. Still, much space is undoubtedly left for improvement in the law and in its administration. As a great amount of necessary information is acquired, the proper sources of revenue and the most effective mode of obtaining it are best developed in the execution of the existing laws, and I have caused measures to be initiated which will, it is believed, enable Congress so to improve and enlarge the system as, when taken in connection with the revenue from customs and other sources, to afford an ample and secure basis for the national credit.

Only on such a basis and on a steady and vigorous restraint upon the currency, can a remedy be found for existing evils. Such restraint can only be exercised when the Government is furnished with means to provide for its necessities. But without the aid of a patriotic people, the arm of the Government is powerless for this or any other desirable end. The denomination of the notes proposed to be issued ranging from $50 to $5,000, place these securities within the reach of all who are disposed to aid their country.

For their redemption the faith, and honor, and property of that country are solemnly pledged. A successful issue to this contest, now believed to be near at hand, will largely enhance their value to the holders, and peace once restored, all burdens can be lightly borne. He who selfishly withholds his aid in the hope of turning his available means to greater immediate profit, is speculating upon his country's misfortunes, and may find what seems to be present gain leads to future loss. I appeal, therefore with confidence to a loyal and patriotic people, and invoke the effort of all who love their country, and desire for its glorious future, to aid the Government in sustaining its credit, and placing that credit upon a stable foundation.

W. P. FESSENDEN,
Secretary of the Treasury.

American Securities in Germany.

Our Paris correspondent mentioned, yesterday, a pleasing circumstance connected with a hasty visit he had just made to Germany. Going from Paris, where little or no sympathy is heard for the Union cause, where the imperialist journals teach the people that the American Government is on the verge of ruin, and where American stocks are unknown, it was like a sudden change from darkness into light to find himself in the midst of many hundreds of bankers and brokers screaming themselves hoarse over American stocks, in a place (Frankfort-on-the-Main) where more American stocks are bought and sold in one day than all the European stocks combined, and where such an interest is felt in the national cause that the agency of the Erlangers in the Confederate Loan is charged against that house as almost a crime! These Federal bonds were bought in most part by permanent holders, and not by speculators—by people who pay little attention to the fluctuations of war, because they have confidence in the future of the Union, and find this the best investment for their surplus funds. Nevertheless, the "bulls" and "bears" of the Frankfort Bourse speculate largely in these stocks on their own account, and appear to be quite as sensitive to small events as the same class of gentlemen on other Exchanges. Our correspondent went on to give the assurance that in the present situation of affairs at Frankfort, a loan of a hundred millions could be negotiated there by the American Government at a day's notice.

This is certainly gratifying. It but bears out what we have heard from many other sources, and what, indeed, appears by the demand for American Stocks in this market on foreign account. Nearly the whole of the European demand is from Germany. Our correspondent said that the pains taken by our efficient Consul-General at Frankfort (Mr. Murphy) "to keep the German public well-informed on the progress of events in the United States, has contributed powerfully to this popularity of American stocks at the leading German Exchange, and we are taught by his efforts how easy it is, with a little well-directed and truthful publicity, to keep public opinion in the right track." This compliment we believe to be justly paid; but the popularity of our stocks among the middle-class people of Germany, is also due in a great measure, we fancy, to the favorable representations of the strength and resources of the United States sent from this country by the patriotic and true-hearted Germans who have a residence and a home among us.

While such a noble confidence in the future of this republic and its financial honor is exhibited in Germany, we are almost ashamed to think of the lack of manly faith exhibited by American-born people in our own midst.—*N. Y. Times, August 7th.*

THE NEW YORK CENTRAL RAILROAD COMPANY,
TREASURER'S OFFICE, ALBANY, July 18, 1864.

TWENTY-SECOND SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-Annual Dividend of Four per Cent. on the capital stock thereof, free of the United States Income Tax, payable on the 20th day of August next.

Dividends in New York will be paid at the office of DUNCAN, SHERMAN & CO.; in Boston, at the office of J. E. THAYER & BROTHER; in Albany, at the ALBANY CITY BANK.

The transfer books will be closed at the close of business on Saturday, the Thirtieth day of July instant, and be reopened on the morning of Wednesday, the twenty-fourth day of August next.

New York, Saturday, August 20, 1864.

Steel Tyres.—Krupp's.

There is no part of a locomotive, tender, or car, which is of greater consequence than the wheels, and of these no part in detail is of more practical importance than the tires. In the wheels then and their tires are two very great principles at stake, to wit., economy and safety, and it is not strange that these have accordingly received continual attention from inventors and manufacturers, or that the modifications of their parts, and the selection of the best iron ores have been the constant study of railway engineers.

Wheels wholly of cast iron in the infancy of railways were used universally, and even now are so in street railways, but they were abandoned on the great railways just as soon as the method of constructing them of malleable iron was attained at the best shops. All locomotive wheels are made of this article; the only part admissible of cast iron is the nave, or central part of the wheel, but in the best modern wheels the nave is formed of the ends of the spokes welded together at the centre. "When cast iron naves are adopted the spokes are forged out of flat bars with T-formed heads, and are arranged radially in the founder's mould, the cast iron when fluid being poured among them. The ends of the T-head are then welded together to constitute the periphery of the wheel or inner tire, and little wedge form pieces are inserted where there is any deficiency of iron. In some cases the arms are hollow though of wrought iron, and there are considerable varieties of arrangement approved by engineers and in use."

Though it might appear a very simple thing to add a tire to a wheel after it is put together, it is quite the reverse. It requires calculation, reference to accurate tables of circle circumferences, calculations for flanges, necessary breadth of the bars, curves of the face which are double with concave and convex lines, sections of a cone, in short, many problems have to be practically solved before a good tire and flange are ready to be placed on the wheel, the swaging, welding, bending and turning being all very nice jobs for the shops. Attaching them to the wheels is also an operation requiring care, calculation and dispatch, not necessary to be enlarged upon.

The greatest improvement was yet to be made, viz., in the application of the steel tire made of superior metal, from the finest ores, for it was found on experiment that the cohesive power of steel is twice as great as that of wrought iron, its ultimate tensile strength being about 130,000 lbs., to the square inch of section. This fact being fully established a new impulse was given to the manufacture of tires, and several European establishments have become celebrated for their production of the article. The works of Mr. F. KRUPP, at Essen, Rhenish Prussia, have accordingly become celebrated throughout Europe, and are beginning to be equally well-known in this country. The business at his factory is so large as to require buildings which cover three hundred acres of land, one-tenth of these are under roof, and the number of his employees is nine thousand. His patent cast steel tires are being extensively used in the United States. We have before us some curious drawings illustrating the amount of wear and tear of the Krupp tire as tested on some of our principal railways. That of a tire used on the Chicago, Burlington and Quincy road shows, after having worn on a driver of an engine weighing 34 tons, and running 18 months in heavy freight service 29,500 miles, was but 3-32ds of an inch.

Those used on the Naugatuck after running 100,181 miles for 2 years and six months, were only worn about 6-32ds of an inch. On the Erie Railway the tires of some heavy freight engines running 21,450 miles do not yet show a wear of 1-16th of an inch, and are expected to run 100,000 miles before being worn down to their first turning. Upwards of twenty-three other principal roads, such as the Michigan Southern, Michigan Central, Hudson River, New Haven and Hartford, Northern New Jersey, Grand Trunk of Canada, &c., use these tires, and not only do they wear well throughout, but they have never been known to burst or crush, a fact of the utmost importance, as an additional guarantee of safety to travelers. The same results have been ascertained by an extended use and trial of these tires in Europe. The conclusion is therefore obvious that these steel tires must come into general use, indeed no others can be safely trusted. They wear well from first to last, and are made of metal so prepared as to be practically indestructible.

THOMAS PROSSER & SON, 28 Platt street, New York, are the sole representatives of Mr. Krupp in this country, and are ready not only to give every information on the subject, but to supply any demand, no matter to what extent.

Morris and Essex Railroad.

The capital stock of the Morris and Essex (N. J.) Railroad has been increased to $3,100,000 to cover the cost of the extension from Hackettstown to Phillipsburg, which is now in progress, and for other purposes. Preparations are nearly completed for issuing seven per cent coupon bonds, redeemable in fifty years, to be secured by a first mortgage on the works and property of the Company extending from the Hudson to the Delaware, and with provision for a sinking fund for the redemption of the bonds at maturity. The issue of bonds will be to provide for the purchase of additional equipment, and to complete the necessary double track, erect engine, car and machine buildings, with other improvements the Company have in view, to make the road a first-class through route for passengers, coal, and other transportation.

Michigan Central Railroad.

The earnings and expenses of this road for the years ending May 31, 1863 and 1864, have been as follows:

Earnings:	1863.	1864.
From freight	$1,983,757 35	$2,073,274 71
" passengers	889,682 28	1,262,415 97
" miscellaneous	73,120 92	98,858 85
	$2,946,560 55	$3,434,548 63
Expenses, viz:		
Repairs of road	$273,759 17	$306,699 65
" buildings	100,923 24	247,895 61
" locomotives	107,096 09	158,915 49
" cars	122,107 28	137,439 91
Locomotive service	62,099 04	84,944 20
Train "	47,176 71	59,941 63
Station "	276,741 57	346,508 18
Fuel	110,239 42	161,178 10
Oil and waste	24,126 78	41,277 24
Stationery, etc	15,594 27	17,452 28
Local taxes	82,386 20	85,617 81
Telegraph	12,025 80	61,745 57
Miscellaneous	38,084 15	10,509 34
	$1,272,359 72	$1,720,125 05
Net earnings	$1,674,200 83	$1,714,423 58

Compared with the previous year, the gross earnings of 1863-'4 show an increase of $487,988 08; with an increase in expenses, including taxes, of $447,765 33—making the increase in net earnings $40,222 75.

The expenses of operating the road (not including taxes,) are $1,634,507 24, or about 47.6 per cent. of the gross earnings. In 1863 they were 40.4. In 1862, 45.1. In 1861, 51. In 1860, 53.7. In 1859, 53.4. In 1858, 59.6 In 1857, 64.6.

Deducting from the above the expenditures on new grain elevator at Detroit, which is properly a charge to construction, were that account not closed, amounting to $86,433 06 would leave the sum of $1,548,047 18 as properly chargeable to operating the road, being about 45 per cent. of gross earnings.

The increase in the earnings of the past over those of the preceding year is equal to 16.56 per cent. The increase in expenses (less taxes) 37.35 per cent.

The earnings from passengers show an increase of $372,732 79, or 41.89 per cent. over the last year; while the earnings from freight have increased only $89,517 36, or 4.51 per cent. The increase in earnings from miscellaneous sources has been $25,737 93, or 35.19 per cent.

The small aggregate gain in freight earnings is in consequence of the falling off of about 25 per cent. in earnings from the important staples, wheat and flour, by reason of the crop of last year having been much below the average. The gain on westward bound freight both through and way was quite large, being 47 per cent. on through, and 23 per cent. on local.

The large gain in passenger business is attributed in part to the "improved financial condition of the people of the Western States, whose late years of great prosperity have placed them in a condition of comparative independence." The report says:

The very rapid settlement of the Western States, and consequent land speculations, gave to the years before 1857 a larger passenger business, as compared with the freight traffic, than subsequent experience has seemed to indicate as a healthy condition of the business upon the East and West trunk lines. These settlements, if they have not already, soon will render these States the largest food-producing regions of the world, and make them exporters and importers through the seacoast of a tonnage sufficiently large to employ all the avenues in this line of traffic.

We therefore look upon our business as having become of late years more permanently established than heretofore, and as promising in the future a steadier prosperity.

Our grain traffic has for several years suffered for the want of more accommodation at the Detroit terminus. To remedy this, and give us the power of further developing this branch of our business, we are now constructing an elevator capable of storing 700,000 bushels, which it is expected will be ready for use the coming fall. The expenditures thus far made upon it amount to $86,433 06, and have been charged to expense account. Its completion will cost about as much more. If this amount was excluded from operating accounts it would leave the cost of working the road at about 45 per cent of its gross earnings, a larger proportion than the cost of the previous year, from the fact that thus far we have not been able to raise the tariff rates as rapidly as the cost of materials and labor have advanced. An early increase in rates upon most of the local traffic is anticipated.

Beside the amount expended upon the elevator, there are other considerable expenditures, detailed in the Superintendent's Report, a part being for improvements and additions to the property, and such as quite generally are charged to construction, but all of which are, as usual with us, charged to working expenses.

A moderate increase in our stock of freight cars, and some further additions to our depot accommodation, will be required the coming season to provide for that increase in our freight traffic which we think it but reasonable to anticipate.

Considering the moderate increase of working expenses, as compared with the large advance in the prices of material and labor, the handsome increase of earnings without the aid of Government patronage, which upon our line, from its position, is insignificant, and the good order of the property at the close of the year, we think the stockholders cannot but regard the result of the year's work as quite satisfactory.

The total number of tons of freight moved has been 542,410. Average number of tons carried per train per mile, 126.07. Average distance freight is carried, 169.48 miles. Freight earnings per mile, 2.25 cents. Tons carried one mile eastward, 60,867,177; do., westward, 31,061,968—total tons carried one mile, 91,929,145. The proportion of tonnage carried eastward was 66.23 per cent.; do., westward, 33.77.

The total number of passengers carried was 645,759, of which 556,206 were way, 81,973 through, and 7,580 emigrants. Of the way passengers, 276,003 went east, and 280,203 west. Of the through passengers, 39,925 went east, and 42,047 west. Average number of miles traveled by each passenger, 79.94. Passengers carried one mile, 51,627,391.

INCOME ACCOUNT.

Balance from previous year		$772,636 52
Receipts from freight	$2,049,084 09	
" pass.	1,262,621 05	
" miscel.	105,480 51	
		3,417,185 65
Total		$4,189,822 18
Expenses (including local taxes)		$1,720,125 05
Dividend 6 per cent. July 1, 1863		363,432 00
" " Jan. 1, 1864		363,432 00
U. S. tax on dividend		21,752 91
" passengers		33,469 39
Annual payment to sinking fund		84,500 00
Interest and exchange account		600,216 77
Balance to new account		1,002,894 06
		$4,189,822 18

The receipts as stated above are $17,362 98 less than the earnings—showing that amount more of earnings to be outstanding at the close of the year.

The balance to credit of income account is $1,002,894 06—showing a net increase of $230,257 53.

The bonded debt has been decreased during the year by the conversion of $258,500 convertible bonds into stock. The capital stock has been reduced $30, by the purchase of fractional scrip to that amount; and increased by conversion of bonds, $258,500.

The contract between this company and the Louisville, New Albany and Chicago Company expired on the 30th of September last, and a new one was entered into at that time for two years, by which the Michigan Central only work the passenger trains between Michigan City and Lafayette.

The property of the company is in all respects in as general good condition as at the commencement of the year, being as fully equipped for business in every way as it has ever been.

The equipment of the road consists of 97 locomotives; 79 passenger, 18 baggage, 1,289 freight, and 269 hand and rubble cars.

The number of miles run by locomotives with passenger trains is 591,994; with freight trains, 729,182; with working trains, 110,038; with training trains, 127,068—total, 1,558,277.

GENERAL ACCOUNT.

American Railroad Journal.

Saturday, August 20, 1864.

Stock Exchange and Money Market.

The condition of the associated Banks on the 15th of August, showed a decrease in loans of $489,263, in specie $79,209, in gross deposits a decrease of $25,937,476 from the amount on the 6th of August, and a circulation of $5,613,177, against $4,522,728 on that day. So it seems after all that their circulation had increased about 20 per cent in nine days. We confess we do not see much conservatism in such a course of proceedure. Consistency is a jewel, which we should like to see more in favor with these institutions, since from a number of them comes much of the opposition we constantly meet with towards the least expansion of the Government issues, though the life of the nation may depend on it.

It is one of the curious facts of the times that silver is largely depreciated as it relates to gold, the difference in some buyers' offices being as much as 20 per cent. We know from the intrinsic and well established mint values of the two metals, there is no such difference, nothing near it; the alloy of the silver coins of the country being about 4 per cent, and of gold about six per cent. It is a proof in our opinion that speculation has much to do with the prices in the market, and that the relative bulk of the two metals being against the easy handling and counting of the one, makes it less agreeable to deal in than the other. It is the convenience then of the operators which has much to do with the price, and if so we find in the fact another evidence, that there are considerations outside of intrinsic or comparative values which enter into the conduct of the gold operators.

The Government 7-30's are improving in demand, because in the first place there is an easy money market, and next because the gold bearing securities are being rapidly absorbed by foreign orders. The six per cents of 1881 have advanced to 108¾, and the 5-20s are steady and in favor. There is no doubt but that all the loans in the market of a national character will be covered by foreign and domestic subscriptions. Nor is there the least danger that the interest will not be always ready. The custom receipts for the last week were full up to $1,470,000, and the balances in the Sub-treasury are on the increase. Half a million of gold was also received for account of the Sub-Treasury, by the late arrivals from San Francisco. Meantime the taxes are producing at least two millions per day, which though apparently onerous are paid in paper, of which there are in all forms, public and local issues, at least two thousand millions afloat. They are paid with promptness and if there is a delay, it is more chargeable to the assessors and collectors than to the people.

The possibilities of a peace are now much taken into account by all operators, for peace will have a direct effect upon the whole financial condition of the country, and as such we consider it when we speak of the proposition. A six months' armistice would certainly if followed up by a convention of the states lead to important consequences. There are two apparent difficulties in the way, so far as we are able to comprehend the subject. The one is that in making formal propositions to the Confederate Government, it would be a quasi recognition of their political status as claimed by them, or would at least be so considered by the Confederate Government. The other is that it would give France and England an opportunity to intervene under the guise of friendship, against which we could make no very strong objection, and could not well resist. By such an opponent as the wary head of the confederacy, the situation would be taken advantage of beyond all doubt. This is the view which many persons greatly inclined to an honorable peace are compelled to take.

Any peace which is to lead to a separation of the Union, would be inevitably its financial destruction also. What would railway property be worth for example, if there were to be State interests coutravening in the management of the lines which run through different states. Who could tell what tariffs or taxes would not be laid upon them every where. What final jurisdiction could settle the infinite variety of questions sure

to arise out of such a state of things? For the moment the common bond was broken, every state that sat up to its own independence, or groups of states which should form confederacies, would be driven by necessity to take care of themselves.

So with regard to the present system of interchange of products and merchandize. Tariffs would be as common as boundaries and as difficult to meet. The system of free trade which we have carried out so triumphantly among ourselves, would soon vanish and we should have a repetition of the European system, where every petty kingdom, dukedom or principality has a word to say about what shall enter or leave its territories. For to this complexion we must come at last, if the natural unity of our physical condition should be destroyed by rival political interests. These things should be thought of in time, it will be too late to remedy such disasters after they are once upon us. There is a class of persons who are so intent on immediate personal advantage, that they shut their eyes to the dangers really before them. If they can make money, live to suit themselves, and free themselves from the liabilities which attend political organizations, they are satisfied.

But individuals cannot flourish if the nation decays. The exceptions are only with those who rule, and fatten on the masses, on the sons of toil and industry. These are what we see abroad in misgoverned countries, where lines are drawn between capital and labor, and where equality of rights and in the pursuit of happiness is given up for the benefit of the ruling classes. The idea of four or five petty republics is absolutely shocking to the mind of every true American. The fathers of the republic early saw where the danger lay, and have warned us against any attempt under any pretence to abandon the Union they procured for us.

Another idea has been recently much agitated in order to bear on this particular question, that of the sovereignty of the states. Now historically the states were never at any time sovereigns. The colonies were, from first to last, charter or else proprietary governments; up to the last possible moment they admitted the authority of the British Government, and in their public documents professed to assert their loyalty and allegiance to it. From this condition they went into a Confederacy, making themselves by the act itself a nation for the first time, and again from this unsatisfactory and inchoate nationality proceeded to form a more perfect Union by the adoption of the constitution, under which the true prerogatives of sovereignty were first enjoyed and recognised. These are undeniable historical facts, and no arguments however urged can shake them in their truth or conclusions. Let us then be careful how we receive the dicta of any class of reasoners who attempt to overthrow history by abstract propositions, not only ill-founded, but leading to the most dangerous results. Those persons who by position, influence or talent in any way lead the public mind, should pause before they proclaim what is unquestionably a gross heresy.

This nation if it adheres to the policy of our forefathers, will emerge from its present financial as well as political difficulties beyond all question. If it departs from it, we predict a wide spread ruin that no subsequent grief or repentance can repair. If we cannot reach the sense and the patriotism of the people, let us at least, warn them to guard their private interests, which are really only the interest of the whole.

It is a curious circumstance that while there is a body of alarmists among us who see nothing but bankruptcy and repudiation before the country, believing that the financial ruin of the North is as certain to take place as that of the South, the cool headed and sagacious bankers of continental Europe particularly in Germany, in the free towns and the other great entrepots of commerce, have no such idea, but on the contrary have the highest one of our strength and perseverance, and continue to invest their money in our securities with the greatest confidence. The last steamer brought orders for large amounts, as well as those preceding it, and they were filled at a handsome advance on previous quotations. Standing at a distance these sagacious capitalists and bankers who inhabit cities which have commercial rather than political interests, who look with indifference on the intrigues of the Sovereigns around them, and escape the anxieties which perplex the communities which are the mere appendages of dynasties, have an opportunity of forming opinions, very correct in the abstract, of what is going on at a distance. They are cool observers.

"They see with equal eye as friend of all,
A hero perish or a sparrow fall."

Or to use another illustration they can form a better opinion of the grandeur of our Country, because at a greater distance they can take in its mountain proportions, than the person who is climbing up one of its sides.

The investments therefore made so increasingly by these foreign capitalists, who are not moved to jealousy by our progress, who have no wish to see this republic destroyed, and have no interest of rivalry to prompt the wish, are seen to be the very best which are this day to be found in the whole commercial world. No other National securities offer any such profit at present prices, and every dollar invested in them is worth two to the invester, as these people abroad well know if we do not.

In view of the absolute wealth of the country to meet the interest and principal of its loans, we have again and again during the past two years called the attention of our readers to the figures obtained by means of the last and preceding census, which demonstrate beyond all doubt the indestructible resources of the United States. One of the ablest pamphlets which has appeared to disseminate and maintain similar statements was that by Dr. Elder of the Treasury Department, which we noticed at the time, with repeated reference. Another able writer has stepped into the field of figures and calculation, Mr. D. A. Wells the author of some of valuable serial works, the annuals of scientific discovery. This writer after careful examination of his subject has succeeded in placing the "burdens and resources" of the country in a point of light which makes everything as plain as day. He shows among many other interesting facts, that if our war debt should ever amount to three thousand millions, the proportion of this debt to each person to pay would be only $82 35, if the capital was paid off, and that our population increasing at its present established rates, the amount in 30 years would not be more than about half that sum for each person. But if we look at the payment of the interest merely for a series of years, Mr. Wells shows that the debt being 3,000 millions the interest each person will have to contribute will be $4 38, and at the end of thirty years, it will be about $2 per capita. In Great Britain it is now $4 25 per capita, in France $3, in Holland, $3 40. So much for the burden of the war. Now as to our resources, it is not to be forgotten that the value of the real and personal assessed property of the United States at the last census was $16,159,000,000. Of this amount there were credited to the loyal States about 11,000 millions, but it is well-known that the real extent and value of the property of the country never came within the knowledge of assessors or census takers.

The established rate of increase in these values being found to be 126.45 per cent. per decade, or 127 per cent. as we have usually stated it, and on this basis, and that of the ratio of increase of our population during the same decades as well as on the returns of former census, the following interesting table is constructed by Mr. Wells, which is an absolute and unanswerable demonstration of our progress and our ability;

Year.	Value of real and personal property.	Average property to each person.	Aver. annual value of the Nat'nal Prod't.
1790.	$750,000,000	$137.00	$187,500,000
1800.	1,072,000,000	202.13	300,000,000
1810.	1,500,000,000	207.20	420,000,000
1820.	1,882,000,000	195.00	526,960,000
1830.	2,653,000,000	206.00	742,840,000
1840.	3,764,000,000	220.00	1,063,135,000
1850.	7,135,780,000	307.67	2,004,000,000
1860.	16,159,000,000	510.00	3,804,000,000
1864.	15,300,000,000	614.95	4,018,000,000
1865.	21,574,000,000	634.62	5,713,500,000

Thus while the population of our country increased from 1850 to 1860 in the ratio of 35 per cent. and a fraction more, the wealth of the country increased more than double, or nearly a thousand millions per annum. During the same time the population of Great Britain increased only at the rate of one per cent., and its wealth but 33 per cent. It is this enormous difference in our progress, compared with that of other nations, which gives almost a sublime character to our movements. Blind as they sometimes appear to be when our rulers have not the grasp of mind to comprehend our destiny, yet they are on a scale whether of war or finance that throw all other similar operations of modern times completely in the shade. In fact, every man in this republic is a power in himself, active, productive, restless, determined, the nucleus of just progress and power.

Before we conclude this interesting view of the subject we add two quotations from Mr. Wells. The one is this:—

"Supposing now the war to close at or before the end of 1865, with a restoration of the dominion of the old Union; supposing also the wealth of the loyal States to have increased since 1860 at the decennial ratio of 100 per cent. (an under rather than an over estimate,) and the valuation of the disloyal States at that period to be one thousand millions less than in 1860; then the reunited nation will start anew on its era of peace, with a capital of twenty thousand millions and an annual increase of wealth which certainly cannot be estimated at less than $2,000,000,000."

The other is a table constructed on the known decennial increase of the population, and the decennial increase of the public wealth.

Years	Population	National wealth	Annual interest per capita	Percentage of debt to property	Average annual value of the national product; the annual ratio of increase as assumed being 10 p. c.
1860	31,500,000	$16,159,000,000			$4,804,000,000
1865	34,000,000	21,574,000,000	$3.35		5,713,500,000
1870	40,950,000	32,318,000,000	4.58	9.28	7,608,000,000
1880	53,235,000	64,686,000,000	3.88	4.64	15,216,000,000
1890	69,205,500	129,272,000,000	2.60	2.32	30,432,000,000
1900	89,964,150	258,544,000,000	2.00	1.16	61,264,000,000

"In the above table, one of the points brought out, which is most worthy of interest after the statement of the enormous prospective increase of our national wealth, is the exhibit of the manner in which in a growing, flourishing state, the burden of a national debt decreases relatively to the burden of the property which must pay it."

We may therefore look our position squarely in the face, for it is at present impregnable.

Government stocks continue in demand at advancing rates. The news of the progress of the war being considered favorable on the other side of the water. When the news from Mobile reaches England and the continent, the present confidence in our final success will be increased. When the London *Times* admits that the reconstruction of the Union is desirable, even at the hazard of the loss of Canada, there can be no doubt that a reaction in our favor is rapidly taking place. The *Times* published a great many articles in favor of the North at the beginning of the war, and it would not surprise us if it did the same thing again. The subscriptions to the 7-30s are liberal and on the increase, being upwards of a million per day.

The old 7-30s of August 19, '61, were due on Friday last, and will doubtless be reconverted, for otherwise the gold interest will cease at that time. The new 7-30s bearing date Aug. 1, are prepared for delivery, and the distribution has commenced. Railway shares are about the same as usual, the varieties being fractional. The balance in the Sub-Treasury on Tuesday was $16,767,776.

At this port the aggregate exports of produce and merchandise (exclusive of specie), for the past week, amounted to $6,808,167.

The value of foreign goods imported into the port of Boston for the week ending Aug. 12, was $1,192,632, against $436,798 for the corresponding week in 1863. The exports were $589,656, against $162,213 41 for the corresponding week in 1863.

The total value of the foreign exports for Baltimore the last week was $310,610.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Michigan 6s, 1873, 103; North Carolina 6s, 60; N. Z. State 6s, 1872, 116; Indiana 5s, 87; Chicago and Milwaukee R. R., 80; Lackawanna and Western 1st mort., 112¼; Brooklyn City Water Loan, 117; Jersey City Water Loan, 110; Mariposa 1st mort., 94; Sixth Avenue R. R., 115; Atlantic Mail S. S. The Banker's and Broker's Telegraph Co.

This company, as will be seen in our advertising columns has opened its subscription books in this and other cities. The object of the company is to erect two sets of telegraph poles to run by different routes connecting New York, Philadelphia, Baltimore and Washington. The line is in process of construction, and one set of wires is expected to be in operation in less than 60 days.

Illinois Central Railroad.

At a meeting of the directors of this company held on the 16th inst., it was resolved to call in for payment on the 1st of October next, at the rate of 120 per cent., the outstanding Construction Land mortgage bonds numbered 1 to 3000 (originally 3000 bonds of $1000 each). This notice of reimbursement with 20 per cent premium is pursuant to the original contract, and is rendered necessary by the difficulty of buying the bonds in open market for the wants of the Land Department, even at higher rates. The final assessment of $10 on the Scrip Shares of the Company is called up for the 26th September, to afford the means of paying for the Bonds and to equalize both classes of the Stock which already carry the same cash dividends. The foresight of making it a condition to

the Land Mortgage, that the Bonds could be paid off at a given rate is now, for the first time, fully appreciated. But for this, the Company, in the process of conveying their lands, in fee simple, to the parties buying and paying for them, might have been compelled to pay 200 per cent for the Bonds. With large cash means now on hand, and nearly a million in addition, which it is really desirable to call up on the Scrip Stock, to equalize it with the Full Paid Stock, the management can at once provide themselves with about $3,000,000 in Bonds for cancellation, as the collections from the Land Department require them to perfect the title to the purchase.

Pacific Railroad of Missouri.

The Kansas City *Journal* announces that the iron is laid on the Pacific Railroad from that city across Blue and Rock Creeks, and is now within three miles of Independence. Next week the cars will leave Kansas City every day, connecting with stage at Independence for Warrensburg. By the 10th instant the track will be laid fifteen miles west from Warrensburg, making but thirty miles staging between Kansas City and St. Louis. On the 10th day of June last there were seventy miles staging; two months will have reduced the distance forty miles, giving the Company nearly five months in which to redeem their promise of opening the road by the 1st of January next.

The Albany and Susquehanna Railroad.

We learn that this road, having been in operation less than a year, has thus far done double the business anticipated by its most sanguine friends. A great impulse has been given by it to all kinds of business in the fertile and beautiful valley of the Schoharie.

☞ At the annual meeting of the Atlantic & St. Lawrence R. R., recently held in Portland, the old Board of Directors was re-elected. The article in the warrant relative to the bonds which mature in 1866, was referred to the Directors, with power to adopt such measure in regard to them as they deem expedient, but limiting the amount of payment to $1,500,000.

☞ The rails are laid on about two miles of the Fall River, Warren and Providence Railroad, and much of the labor on the road has already been done. Three sets of workmen are employed on the wharf and pier at Somerset.

☞ A special election is to be held in Leavenworth, Kansas, on the 22d instant, to ascertain the wishes of the people with reference to subscribing $250,000 to the stock of the west branch of the North Missouri Railroad.

☞ The contract for the construction of a railroad from Bay City, Michigan, to East Saginaw, has been given out, and the work will be immediately commenced.

☞ The stock of the Atlantic and Great Western Railway has been placed on the list of the New York Stock Exchange.

☞ The Grand Trunk Railway Company has given notice that it has assumed the management of the Buffalo and Lake Huron Railroad.

☞ The Massachusetts Legislature has granted a charter for a Horse Railroad extending from Stratford through Bridgeport to Fairfield, Conn.

Atlantic and Great Western Railroad.

The following table shows the gross monthly earnings of the Atlantic and Great Western Railroad since the commencement of the present year:

	Passengers, Mails, &c.	Freight.	Total.
January	$38,615	168,683	207,298
February	50,189	178,852	229,041
March	60,518	166,315	226,733
April	63,992	133,275	197,367
May	57,193	157,486	214,679
June	73,654	240,857	314,521
July	82,665	249,433	332,098
Total	$426,826	1,294,811	1,721,637

☞ Samuel Marsh, Esq., for many years Vice President of the Erie Railway Co., has been elected President, and the Hon. Dudley S. Gregory Vice President.

The Seven-Thirties--What are they?

We trust that a large portion of our readers have pondered the Appeal of Mr. Fessenden, our new Secretary of the Treasury. The purport of it is that the People of the United States, acting as a body through their agent the Government, wish individuals to lend them two hundred millions of dollars for three years, at seven and three-tenths per cent. annual interest, payable every six months. For this they offer Treasury Notes—that is, in reality, notes drawn and endorsed by every man in the country. The loan is wanted for a great National purpose, to effect which every man, unless he be a traitor at heart if not in act, is solemnly pledged.

The Appeal is addressed not merely to a few great capitalists, but also to the many whose aggregate means constitute the mass of the wealth of the land. The notes upon which this loan is asked are from $50 upward. Every man who has fifty dollars can take part in this loan. Apart from patriotism and the duty which all owe to their country, no investment is so desirable as this.

It is secure. Every dollar of every man's property is pledged for the punctual payment of the interest, and of the debt when due. The security is increasing in value. For some years before the war we were earning 1000 millions a year more than we spent. During the three years of the war, owing to the high prices and constant demand for labor, we have earned more than ever before. No man who could or would work has been idle; and except for the war, we have spent less than before. In three years of the war we of the United States have certainly earned 3000 millions more than we have spent apart from the war. The cost of the war may be set down at 2000 millions. Deducting this from our net earnings, the people who are security for this loan are 1000 millions richer to-day than they were when the war broke out.

No other investment can be so easily convertible. The man who has a Treasury note for $50, or $100, or $1,000, can turn it into money more readily, and upon better terms, than if it were invested upon bond and mortgage, or in railroad stocks.

The interest offered is higher than can be realized from any other safe and convertible investment. It is, moreover, readily collectable when due. To each note are affixed five "coupons," or *interest tickets*, due at the expiration of each successive half year. The holder of a note has simply to cut off one of these coupons, present it at the nearest bank or Government Agency, and receive his interest; the note itself need not be presented at all. Or a coupon thus payable will everywhere be equivalent, when due, to money.

Thus, while this loan presents great advantages to large capitalists, it offers special inducements to those who wish to make a safe and profitable investment of small savings. It is in every way the best Savings' Bank; for every institution of this kind must somehow invest its deposits profitably in order to pay interest and expenses. They will invest largely in this loan, as the best investment. But from the gross interest which they receive they must deduct largely for the expenses of the Bank. Their usual rate of interest allowed to depositors is 5 per cent. upon sums over $500. The person who invests directly with Government will receive almost 50 per cent. more. Thus the man who deposits $1,000 in a private Savings' Bank receives $50 a year interest; if he deposits the same sum in this National Savings' Bank he receives $73. For those who wish to find a safe, convenient, and profitable means of investing the surplus earnings which they have reserved for their old age or for the benefit of their children, there is nothing which presents so many advantages as this National Loan.

It is convertible into a six per cent. gold-bearing bond. At the expiration of three years a holder of the notes of the 7-30 loan has the option of accepting payment in full or of funding his notes in a six per cent. gold interest bond, the principal payable in not less than five nor more than twenty years from its date as the Government may elect. For six months past, these bonds have ranged at an average premium of about eight per cent. in the New York market, and have sold at 109 to-day (Aug. 12th,) thus making the real rate of interest over ten per cent.; and besides, to make the inducement even greater, Congress by special act exempts its Treasury notes from State and municipal taxation. Could Shylock ask more? Was patriotism ever so liberally rewarded.—*Harper's Magazine.*

Railroad Earnings--Monthly.

The approximate earnings of the Pittsburg, Ft. Wayne and Chicago Railway Company during the month of July, compared with the same period last year, were as follows, viz:

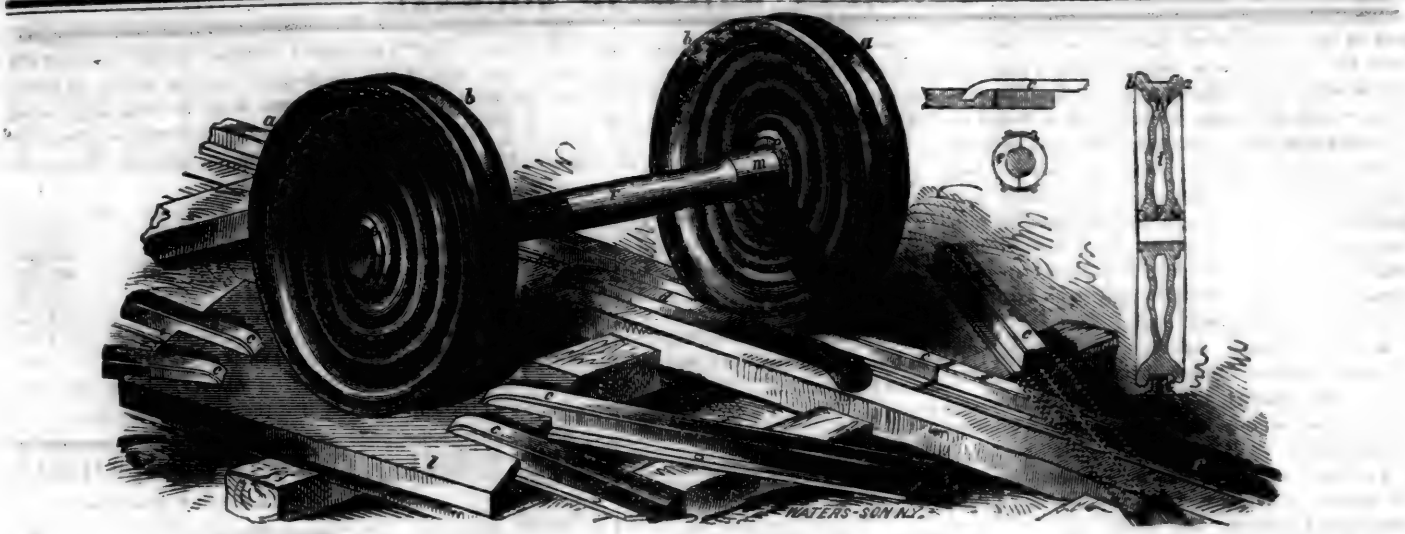
	1864.	1863.
Freight	$309,441 67	$221,288 92
Passengers	155,881 21	108,738 95
Express matter	5,200 00	2,700 00
Mails	7,825 00	7,825 00
Rent of railway	7,083 33	7,083 33
Miscellaneous	1,650 00	3,117 29
Total	$486,681 21	$350,753 49
Increase		$135,927 72
En'gs fr. Jan. 1 to July 31	$3,458,441 53	$2,802,592 30

Increase for July, 38¼ per cent.; average increase to July 31, 23.4 per cent.

The earnings of the Erie Railway for the month of July, 1864, were. $974,316 85
Corresponding month of previous year 731,243 20

Increase $243,073 65

The earnings of the Cleveland and Pittsburg Railroad Company for the month of July, 1864, were $214,533
Corresponding month of previous year . . 182,655



Increase $31,878

The traffic receipts of the European and North American Railroad for the month of July 1864, compared with the corresponding month last year, is as follows:

	1864.	1863.
Passengers	$7,966 37	$6,485 13
Freight	6,177 31	4,840 84
Mails and Sundries	1,186 80	1,360 67
Total	$15,360 48	$12,720 64
Increase		$2,637 84

Comparative statement of earnings of the Ohio and Mississippi Railway Company, Eastern and Western Division, for July, 1863 and 1864:

	Gross Earnings,
1864	$262,990 70
1863	169,704 24
Increase	$93,286 46

Double Flange Railroad Car Wheels.

We would call the attention of the railroad public to the improved railway car wheels, (see accompanying cut.) "To prevent cars running off the track," and save the lives of passengers and railway property, usually caused by obstructions, breaks, &c. It may be seen by investigation, that in the running of these wheels wherever such accidents occur or are liable to occur, the outer flanges come into immediate requisition, and the force of the strain, also the friction is very nearly equalized on both ends of the axle, on both rails, and also on both wheels. Thus rendering as it were an united strength, bearing equally on the superstructure by the action of the outer flange in conjunction with the opposite inner flange on the opposite rails.

It may be noted that an improvement running on such a principle and in such a manner is almost to a certainty safe for passengers as well as property of companies; and running off the track would be almost an impossibility—so of other accidents of a kindred nature. On a trial (experimental) with a small train of cars around a short curve, this improvement was found to be a complete proof against running off the track after repeated trials with obstructions on the outside rails.

All well knew, that with the single flanged wheels a train could not run around a single time in such a case, without running off; showing conclusively, that in this improvement there is not only a *preventive against* accident, but *safety* in case of *positive accident*.

Thus rendering it abundantly safe for a permanent base, for a high rate of speed whenever desired. The large sized wheels are especially intended for the greatest speed, *without any increase of friction or wear*, as may be desired. Express trains may easily run 60 to 70 miles minimum per hour, and it may not probably be necessary to put on this improvement only on *express trains*, except *new roads*. The spreading of rails on many of our railways is of frequent occurrence, and trains are generally thrown off the track in such cases in consequence. It is undoubtedly caused by a heavy strain and pressure on one side of the track, especially aroound curves and other places. It is apparent that under such circumstances the single flange wheels afford no security, or in any way help sustain the side on which the weight and strain may fall.

We may readily perceive that in cases of this kind the double flange wheel comes into full play, and its superiority is manifest. The wheels, axles and rails are alike made to bear an equal burden while the safety of all parts is insured.

Precisely the same result is noted in the breaking of axles; also when an axle does break, it keeps the cars on the track in safety and security.

In looking into the movement of these wheels it is patent to any candid mind, that it is almost impossible for a train to be thrown off the track with this improvement on and in practical use.

In cases of collision it is well-known that the cars are nearly all usually thrown off, while with the double flange wheels all the cars except those smashed would remain on the track from the principle of safety with which they are combined.

The same advantages are also apparent in case of breaking of rails in cold weather, and attended by similar results.

The play between the outer flange and the rail is an inch to an inch and a half. The inner flange is similar in size, and runs the same as the old ones. The additional flange being shorter and lighter.

Nothing of importance to alter as respects rails, except frogs which are simple and solid, not as expensive by far as the old style, easy for both kinds of wheels to run over, so that only express trains need be altered for new wheels unless so desired. It has been suggested by engineers that the old frogs could be altered to suit the new wheels. The most important point in relation to this improvement is its almost perfect safety with great speed, both so desirable, and with the larger wheels a relative increase of speed; thus with a proportionate increase of size the same ratio of speed is attained without any increase of wear or friction. Or less friction and wear without increase of speed; but an easy, smooth, agreeable and steady roll over the rails, agreeable indeed to travelers, with all the safety that could be asked; and which is certainly a most desirable consideration for the traveling public.

It will thus be seen that we have three decided advantages in this improvement, as follows, viz: Safety of life, of railroad property, and a high rate of speed. It must be evident to all who well understand this subject that the double flange railway car wheels embody the correct principle of safety, with speed so essential and desirable to a well managed road, and would undoubtedly lead all rival lines when in practical operation.

We may consider the great saving of life and property, and its superior advantages over the old single flanges, and railroad companies will undoubtedly see their decided interest in adopting it and putting it in practical operation, for reasons which may be well understood by intelligent and discriminating minds. According to a leading railway gentleman, life and property are dependent on slight contingencies on our railways. He says that the old or single flanges it is indeed precarious, as it runs on the principle of gravitation. The least element of disturbance upsets all real safety to life and property. Any obstruction, any break, and we have an almost indubitable result.

It is useless to deny these facts, as the buried dead for forty years past, mostly from causes enumerated, herein attest in the most forcible manner. An improvement that will unquestionably save life, and attain an accelerated speed, commends itself to all right thinking men, and deserves its place among those more noble and first order of improvements of the present age; to be practically and generally used for the benefit of the race. And certainly it cannot escape the notice of those clear and discriminating minds who direct the great railway interests in our country.

It has been remarked by one who well understands railroads, especially the running of cars, that an additional flange would do no good. The question was asked in turn, what any flange was needed for? The reply was for safety. We find therefore, that flanges are as a matter of course, a principle of safety.

But it is well-known, that in most cases such as the running off the track from various causes, or breaking of axles single flanges are of very little avail as far as safety is concerned, while with the double flange we have the whole safety and not half, and in case of positive accidents all the safety so to speak, and which has been plainly demonstrated.

As to expense in putting on this improvement on new roads, it can be put on at even less expense than the old style of wheels; and the

cost is but little when taken into comparison with the benefits to be derived when in practical use in saving life and property. And public confidence, and patronage on leading lines would be unmistakable, and place any road adopting it on a most decided vantage ground over others. We commend this improvement for adoption and practical use, especially in leading lines of railways, and particularly call the attention of the officers and directors of the Pacific Railroad to California, to it in order that they may at an early day secure the right for their road.

We are informed that one of the prominent roads having connection with some of the largest ones in this country, are about making arrangements to put on this improvement, also a leading foreign road.

The right of use of this improvement for sale by Messrs. DAVIDSON, DICKINSON & Co., Engineers, 229 Broadway, New York. See advertisement in this JOURNAL. Wheel resting on a part of new Frogs.

Railroad Earnings--Weekly.

The earnings of the Marietta and Cincinnati Railroad for the 1st week in August:

	1864.	1863.
Passengers	$8,441 42	$3,756 81
Freight	8,963 16	4,731 00
Mail, express & telegraph	1,125 58	875 00
Total	$18,530 16	$9,362 81
Total since Jan. 1	$565,466 64	$360,925 91

The traffic of the Great Western Railroad for the week ending August 5th, 1864, was as follows:

Passengers	$25,565 81
Freight and live stock	20,872 72
Mails and sundries	2,383 34
Total	$48,821 87
Corresponding week of 1863	42,176 98
Increase	$6,644 89

The earnings of the Chicago and Alton Railroad Company for the week ending August 7th, were:

	1864.	1863.
Passengers	$19,365 16	$12,145 32
Freight	32,780 97	23,575 20
Sundries	1,711 71	2,169 42
Total	$53,857 84	$37,889 94
Increase 1864		$15,967 90

The earnings of the Grand Trunk Railway for the week ending Aug. 6th, 1864, (including the receipts of the Montreal & Lake Champlain and Buffalo & Lake Huron Railways), were: $100,045 41
Corresponding week, 1863 89,726 54
Increase $10,318 87

The earnings of the Michigan Southern and Northern Indiana Railroad for the 1st week of August, 1864, were $66,000 60
Corresponding week of previous year 39,782 86
Increase $26,217 74

The earnings of the Michigan Central Railroad for the 1st week in August, 1864, were $63,415
Corresponding week of previous year 37,234
Increase $26,181

The earnings of the Milwaukee and Prairie du Chien railroad for the 1st week in August, 1864, were $25,721 00
Corresponding week of previous year 12,735 00
Increase 12,986 00
Increase since Jan. 1, 1864 $31,834 00

The earnings of the Chicago and Rock Island Railroad for the first week in August, 1864, were $47,166 00
Corresponding week of previous year 31,807 00
Increase $15,359 00

The earnings of the Cleveland and Toledo Railroad for the 1st week in August, 1864, were $27,993 00
Corresponding week of 1863 24,528 00
Increase $3,465 00

The earnings of the Chicago and Northwestern Railway for the week ending August 7, 1864, are as follows:

Passengers	$27,479 84
Freight	58,072 49
Mail	1,405 35
Express	1,382 39
Total	$88,340 07
Same period last year	56,153 62
Increase 57 31-100 per cent	$32,186 45

The earnings of the Racine and Mississippi and Northern Illinois Railroad for the week ending July 31, 1864, were:

	1864.	1863.
Passengers	$3,014 28	$2,513 15
Freight	8,621 09	4,576 98
Express	104 16	75 00
Mails	296 58	296 58
Total	$12,036 11	$7,461 71
Increase		$4,574 40

Receipts from January 1st to July 31:

1864	$318,602 67
1863	194,521 55
Increase	$124,081 12

Old Colony and Newport Railroad.

At the annual meeting of the stockholders of the Old Colony and Newport Railroad Company, held at Boston on the 28th ult., it was resolved to issue bonds to the amount of five hundred thousand dollars, bearing six per cent interest, and having twenty years to run—for what purpose was not stated. It was also resolved to authorize the directors to take measures to procure a consolidation with the Dighton and Somerset Railroad Corporation. The receipts of the Old Colony road for the six months ending June 1, 1864, were $301,694; the expenses, $212,562. Out of the surplus of $197,000 was paid a dividend of $144,000, leaving a balance of $34,748.

The annual meeting of the stockholders of the Dighton and Somerset Railroad Company, was also held in Boston on the 28th, at which a report was read, stating that the amount of receipts on account of 5,162 shares of stock was $180,412, of which $81,000 was from the full payment on 1,815 shares. Of this $150,000 have been paid for railroad iron, other lesser sums, and $26,000 is on hand.

☞ A bill is before the New Hampshire Legislature to fund the debt of that State. It provides for the issue of bonds to the amount of $3,500,000, at a rate of interest not exceeding 6 per cent, payable semi-annually in Boston or New York, in not less than thirty or more than forty years, not more than $1,000,000 payable in any one year. Bonds to be sold by proposal, at not less than par. Fifty thousand dollars of railroad tax to be set aside annually as a sinking fund, and also whatever may be received from the General Government.

☞ The speedy collapse of the mischievous speculation in produce and the return of lower prices may be inferred from the following table, copied from the Chicago *Tribune*, showing the amount of flour and grain in store at Chicago at the dates indicated:

	July 25, '64.	July 25, '63.
Flour, bbls.	27,263	32,488
Wheat, bushels.	916,447	460,296
Corn	1,748,151	982,761
Oats	267,632	216,286
Rye	12,663	21,936
Barley	6,070	1,316

According to the above table, there is nearly double the amount of wheat and corn in store now in that city that there was a year ago.

DOUBLE FLANGE R. R. CAR WHEELS.

BALL AND WHEELOCK, PATENTEES.

Seventy Miles an Hour.

Saves Life and Property.

RIGHTS FOR SALE BY

DAVIDSON, DICKINSON & CO.,

CIVIL ENGINEERS,

229 Broadway, N. Y.

RICHARD DUDGEON,

MACHINIST,

24 COLUMBIA ST., NEW YORK,

WOULD respectfully inform his friends and the public that he has removed to his new Building **No. 24 Columbia Street**, where he is prepared to furnish

Hydraulic Jacks, of from 4 to 150 tons lifting power. PULLING JACKS of different sizes.

Hydraulic Presses WITH PLATENS.

Hydraulic Punches for punching iron from three-eighths to 1 inch thick. **Force Pumps** for Hydraulic Presses. Force Pumps for testing tubes, cylinders, etc.

STEAM CARRIAGES for good hard roads.—Squirting Oil Cans, also Danver's Patent Steam Hammer

THE NEW YORK CENTRAL RAILROAD COMPANY,
TREASURER'S OFFICE, ALBANY, July 18, 1864.

TWENTY-SECOND SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-Annual Dividend of Four per Cent, on the capital stock thereof, free of the United States Income Tax, payable on the 20th day of August next.

Dividends in New York will be paid at the office of DUNCAN, SHERMAN & CO.; in Boston, at the office of J. E. THAYER & BROTHER; in Albany, at the ALBANY CITY BANK.

The transfer books will be closed at the close of business on Saturday, the Thirtieth day of July instant, and be reopened on the morning of Wednesday, the twenty-fourth day of August next.

The Paper Famine.

The high price of paper in this country is seriously affecting a large and leading interest, that of the publishers of newspapers and books, and is likely to diminish their circulation. For there is nothing more certain than that excessive high prices reduce consumption. To meet this contingency, which is not merely the effect of a disordered currency, but a scarcity of the material for manufacture, owing in a great degree to the diminution in the supply of cotton, the greatest efforts have been made to procure a substitute for this material. Hundreds of various kinds of vegetable fibres have been tried, and though most of them have confidently been pronounced successes, we see no where any extensive manufactories adopting any one of them on a large scale. Now and then we hear of a newspaper being printed on what was once wood fibre, or some such unexpected material, or on straw. We know that at the great mills at Niagara Falls, tow is largely used to mix with ordinary rags, and now we are told that in Austria, corn husks are converted into all kinds of paper, some of them of the most beautiful description, and that the cost is so moderate as to defy competition on the old plans. The Commissioner of Agriculture at Washington announces the receipt of numerous specimens of the new fabric and invites their examination. Certainly in the Western States where corn is raised in millions of bushels, the husks thus used would be an item of great value. We wait confidently for some movement in this last direction, as the demand may lead to the adoption of the Austrian process at an early day.

In the meantime we are not alone in our dilemma. An extraordinary state of things exists also in England, of the same character and to an alarming extent. A paper famine is also threatening to overtake that country, and parliamentary inquiry is begun as to its cause and remedy.

The paper mills are being closed to a considerable extent, many long established manufacturers have failed or are closing up their business, and Mr. Maguire, an M. P., in a recent speech in the House of Commons, gave a picture of the condition of the paper trade in his country as curious as it is startling. According to his statements which were not contradicted, the capital embarked in the business in the United Kingdom is thirty five millions of dollars, and the number of persons engaged in the manufacture directly and indirectly 100,000; while 200,000 more through the workmen and their families are dependent on the continuance and prosperity of the manufacture. He also stated that from five to seven millions of dollars were annually diffused throughout the country in wages to operatives. All this he contended had been sacrificed to the clap-trap of free trade.

Three half pence in the pound represented the Excise duty. It took a ton and a half of rags of the best quality to make a ton of fine paper, and two tons of the lowest quality. So that this charge alone amounts to about seventy dollars per ton of paper. Now as the British Mills are mainly dependent on foreign rags for their supplies, they labor under the difficulty that the principle of free trade, which is the British theory sometimes at least, is not adopted by those nations with whom she is most liberal. Thus according to Mr. Maguire, there is an *export* duty on Rags in Germany of £6 6s. per ton; in Prussia and all through the Zoll Verein it is £9 8s; in Holland £8 8s; in Austria £7 6s; in Italy £3 6, having been raised from £1 12s. 8d. In France where formerly the exportation was prohibited, the duty was now £5 per ton; in Belgium the same, and in Portugal £6. Now the effect of these export duties is this, that it not only makes a part of the price to the purchaser in England, but acts as a reduction in the cost comparatively speaking, in the price of the paper itself. In other words the French and Belgian paper, for example, undersells British paper in the British markets. The consequence is the stoppage of the mills and the ruin of the proprietors. A large number of documents were produced to prove all the assertions made by Mr. Maguire, and they were without exception to the effect that the paper makers were going to ruin.

The remedy proposed was an abandonment of the free trade principle, so far as to keep this cheap foreign paper out of the market by a renewal of the customs duty on rags, and to such an extent as to counterbalance the foreign Export duty, and probably at the next session of parliament, a Committee will report some such measure. Cheap as the English operatives work, those of France and Belgium work cheaper; and as the paper manufacturers in those countries have the supplies of rags pretty much at their price in consequence of this export duty, they must for the present, have the markets of the world at their command.

Our American manufacturers can no better import rags than the British, and therefore the true way for those who consume much paper is to follow the example of the *Times* of this city and import what they want from abroad.

Hoping, however, that the corn husks will yet remove all the difficulties, we must bide our time.

☞ A meeting of officials connected with the Philadelphia and Erie and Oil Creek Railroads was held in Erie a few days since, to adopt means for the immediate extension of the Oil Creek road, four miles further down the creek, below the Shaffer Farm. A committee was appointed to obtain the right of way, and such other arrangements entered into as will secure the immediate prosecution of the work. The *Erie Dispatch* persists in its statement that the Oil Creek Railroad will soon be changed to a narrow gauge.

☞ The idea of utilizing coal dust, by putting it in such form as to serve for fuel, is practically carried out in Belgium. The end is effected by combining eight parts of coal tar with ninety-four parts of coal dust. This mixture, subjected to great heat, becomes a paste, which is pressed into cakes. Those cakes are warranted to produce not more than six per centum of ashes, and are in great demand for generating steam for railway locomotives.

☞ The *Mahoney Register* says that work will soon be commenced on the New Lisbon Railway. Matters are being put in readiness as fast as possible, and when the laborers are put on the work it will be pushed ahead speedily. Mr. James McHenry, who recently arrived from London, and Mr. Kennard, are expected over the line in a few days, for the purpose of examining the route, and the coal and mineral prospects.

Little Miami and Columbus and Xenia Railroad Companies.

The gross income derived from the joint operations of these roads during the year ending November 30, 1863, has been as follows:

From passengers	$821,647 73	
" freight	1,018,581 71	
" rent of track and depots	62,187 47	
" mail & express	108,232 71	
		$2,005,649 62
From which deduct:		
Amount paid C. H. & D. Co., in division of earnings for the year ending Nov. 30, 1863	$49,809 89	
Re-adjustment of earnings with C. H. and D. Co. from March 31, 1862, to Nov. 30, 1862	24,219 04	
		74,028 43
		$1,931,621 19
Add amount received from C., C. & C. Co., on division of earnings for six mo. to Nov. 1863.	12,123 50	
Add earnings of car mileage for year ending March 31, 1863	5,034 17	
		17,157 67
		$1,948,778 86
Expenses, viz:		
Repairs of road	$237,748 89

" " " June 1st, 1866	36,800 00
Interest account and unpaid interest	15,101 95
Unclaimed dividends	977 47
	$2,137,858 95
The total cost of road and equipment to November 30, 1863, was	$1,686,202 20
November 30, 1862, it was	1,659,951 03
Increase	$26,251 17

The account with the stockholders is as follows:

Surplus, November 30, 1862	$198,522 16
C. & X. Co's. share of net profits after paying dividends	127,520 59
Surplus, Nov. 30, 1863	$326,042 75

The equipment of the road consists of 40 locomotives; 34 passenger, 18 baggage, mail and express, 421 box, 21 box stock, 35 rack stock, 107 platform, 15 lime and 20 gravel cars.

The number of miles run by engines has been: With passenger trains, 393,785; with freight trains, 561,000; with wood and construction trains, 47,862—total, 1,002,647, an increase over the previous year of 155,765.

The following statement exhibits a comparison of mileage and cost of repairs for seven years:

	Miles run.	Cost of repairs.	Cost pr. m.
1857	666,546	$65,479 46	9.82 cts.
1858	687,835	59,031 92	9.25 "
1859	732,924	54,507 41	7.43 "
1860	796,187	60,778 92	7.63 "
1861	814,908	55,469 20	6.80 "
1862	846,882	67,395 35	7.95 "
1863	1,002,647	96,713 78	9.64 "

The following is a comparative statement of the mileage and cost of repairs of passenger cars for the past and preceding years:

	Miles run.	Cost of repairs.	Cost pr. m.
1862	1,877,655	$20,787 28	1.10 cts.
1863	1,959,501	35,683 02	1.80 "
Increase.	81,846	$14,895 94	0.70 "

The mileage and cost of freight cars during the same time has been:

	Miles run.	Cost for repairs.	Cost pr. m.
1862	6,201,887	$71,938 49	1.15 cts.
1863	6,729,166	80,617 69	1.19 "
Increase.	527,779	8,679 20	0.04 "

The cost of renewal and repair of iron rail, renewal of cross ties and chairs, opening of ditches,

renewal and repair of culverts, cattle gaurds, and other masonry, repairing fences, surfacing track, etc., has been $241,684 77; against for last year, $179,663 04—an increase of $62,021 73. The following materials have been used in renewals during the year: 3,009 tons iron rails, 19,710 new chairs, 143,100 lbs. spikes, 43,511 cross ties 6,500 iron rails repaired—the total cost of which has been $138,459 51.

The cost of repairs of road per mile run by locomotives and cars in 1863, was 2.35 cents. In 1862 it was 2.01 cents.

It has required a large amount of material to properly maintain the repairs during the year, and the prices on the same have been much above those of any previous year.

The extraordinary tonnage carried has been severely felt in the wear of rails, and has necessitated the renewal of 8,000 tons during the year.

About twenty miles of the Columbus and Xenia road have received a coating of ballast.

The general condition of the road bed and track has been well maintained.

The expense of repairs on bridges has been unusually light, being only $3,332 48 against $16,025 44 in 1862, showing a decrease of $12,692 96, no considerable repairs having been required on any of the large bridges. The bridges generally on the road are in good condition, with the exception of the Miami River bridge, at Miamiville, which although safe for present use, must be rebuilt during the coming year.

During the year, 935 panels of new fence have been built. An addition of 40 feet in width has been made to the back-side of the passenger depot, to give additional facility to the in-freighting business. This gives an additional storage and delivery room of over four hundred and fifty feet in length. A passage and driveway for the accommodation of teams, has been graded out on the wharf property entirely around the building.

There have been carried on the road during the year 611,072 passengers, exclusive of commuters, of whom 166,758 were through passengers and 444,314 were local. Number of passengers carried one mile 32,147,837. The total number of tons of freight transported was 448,806—of which 315,147 were through and 143,659 were local.

On the 12th of March, 1863, these Companies commenced operating the Dayton and Western Railroad under the lease. The earnings or expenses from that road are not, however, included in this statement. The report says:

The increase in prices of labor and of all kinds of materials required in the operation and maintenance of the road, will, no doubt, much increase the proportion of expenses to earnings during the coming year. For, while the expenses of operating will be largely increased, no increase can be made in the rates charged for the transportation of passengers and freight.

The officers and directors of the Little Miami Railroad Co., for 1864, are as follows:

President.—W. H. Clement.

Directors.—Jos. C. Butler, Jos. Torrence, Nathaniel Wright, James Hicks, Jr., Larz Anderson, W. H. Clement, Alphonso Taft, Chas. H. Kilgour, Henry Hanna, John Bacon, Abraham Hivling, Jos. R. Swan.

Secretary.—Chas. H. Gilgour.

Treasurer.—S. E. Wright.

Auditor.—D. G. A. Davenport.

Superintendent.—E. W. Woodward.

The officers and directors of the Columbus and Xenia Railroad Co., for 1864, are as follows:

President.—Jos. R. Swan.

Directors.—Wm. Dennison, Jr., Robert Neil, D. W. Deshler, L. Goodale, Wm. B. Hubbard, Jos. R. Swan, Geo. M. Parsons, W. H. Clement, Larz Anderson, Henry Hanna, Abraham Hivling, Simon Gebhart.

Vice President.—W. H. Clement.

Superintendent.—E. W. Woodward.

Secretary and Treasurer.—Cyrus Fay.

Railroad Earnings--Monthly.

The earnings of the Toledo and Wabash Railroad Company for the month of July, 1864, were $139,626 00
Corresponding month of previous year 105,753 00

Increase $33,873 00

The earnings of the St. Louis, Alton and Terre Haute Railroad for July, 1864, were.. $144,941 73
Corresponding month of previous year 118,076 81

Increase $26,864 92

The earnings of the Norwich and Worcester Railroad for the month of July, 1864, were $54,422 24
Corresponding month of previous year. 41,012 46

Increase $13,409 78

Vermont Central and Vermont and Canada Railroads.

No report of the doings of these Corporations having been printed at the last annual meeting, we have obtained the following facts from official sources, and think they cannot fail to be of interest to our readers:

Year ending	Earnings.	Expenses.	Net income.
May 31, 1864	$1,227,8 7 35	$ 41,843 59	$286,968 76
May 31, 1863.	941,045 59	6 8,168 63	262, 86 96
May 31, 1862 (11 m.)	713,417 73	521,9 2 30	191,46 43
June 30, 1861.	800,830 11	5 8,779 97	22,060 14
June 30, 1860.	775,568 91	647,842 33	128,726 58
Total	$4,458,069 69	$3,368,576 82	$1,090,092 87
Increase of earnings in 1:64 over 1863.			$286,761 76
Increase of net income			23,066 80

The small increase of net income is owing to the fact, that although the gross earnings have been increased largely over previous years, the expenses, have also largely increased, making it necessary to advance the rates for local travel and through business, which is shortly to be done.

The capital stock of the Vermont and Canada Railroad is now $2,070,000, and upon the completion of the branch from Swanton to Highgate, the capital stock will be further increased by issues to the first mortgage bondholders of the Vermont Central Co., so that the capital will then stand $2,250,000.

Interest on this amount at 8 per cent would be $180,000.

The following statement of net earnings for the years given, shows that the annual rent due the Vermont and Canada Co. is well secured:

1863.	1856.	1861.	1863.	1864.
$269,821 34	214,196 28	222,050 14	282,886 96	285,963 76

The original lease from the Vermont and Canada to Vermont Central provides for the payment of the incidental expenses of the former, in addition to the rent of 8 per cent., and the same is confirmed by the decree of Court, made last January.

In June last a payment of $70,000 (3½ per ct.) was made upon the Vermont Central 1st mortgage bonds, and farther payments to the amount of $180,000 are arranged, being more than one year's interest. After these are made, the net income will doubtless be sufficient—over and above the payments which must first be made to the Vermont and Canada—to pay at least *seven* per cent. per annum to the Vermont Central 1st mortgage bondholders. By the decree of Court they are secured next to Vermont and Canada, and they can, by that decree, require payment of the whole amount due them—principal and interest—including all in arrear, before any payment is made to the second mortgage bondholders. The high prices paid for the latter would seem to indicate an expectation of largely increased receipts, and such may be expected from various causes. Much business was lost last year from an insufficiency of cars which have since been supplied in large numbers, part made at the shops in St. Albans, and in addition a contract has been made for 150 freight cars.

The rates for freight and passengers are to be immediately increased. The branch from Swanton will make a better connection with Montreal, and goes through a region which has not had railroad facilities, and the high prices of the agricultural products of Vermont must materially increase the local business.—*Boston Courier.*

☞ The San Francisco exports of merchandise and treasure during the half year ending July, were:

	1862.	1863.	1864.

☞ The loans authorized by various acts of Congress and yet available, including the one now before the people, are as follows:—

Under act of March 3, 1863, bonds, six per cent.	$33,245,800
Under act of March 3, 1864, 10-40's, five per cent	125,471,550
Under act of June 30, 1864, bonds redeemable in not less than five nor more than thirty years, or, if expedient, made payable at not more than forty years from date, bearing interest not exceeding six per cent. payable in coin	400,000,000
(Or, in lieu of an equal amount of the bonds last named, not exceeding $200,000,000 in Treasury notes, payable at not exceeding three years from date, or, if expedient, at any time after 3 years from date, bearing interest not exceeding 7 3-10 per cent., payable in lawful money, at maturity or semi-annually.)	
Under act of February 25, 1862, bonds 5-20's, in Europe	4,000,000
Total	$562,717,350
Under act of June 30, 1864, in substitution of five per cent. legal tender notes heretofore issued, now withdrawn to be destroyed, there may be issued notes as above described.	67,639,897
Total	$630,357,247

☞ Application is to be made at the next session of the Legislature, for a charter of a railroad from Fairfax Village Vt., to unite with the Vermont and Canada Railroad at Georgia.

Railroad Earnings--Weekly.

The earnings of the Chicago and Northwestern Railway for the week ending August 14, 1864, are as follows:

Passengers	$32,404 65
Freight	65,852 29
Mail	1,481 78
Express	1,405 35
Total	$101,094 07
Same period last year	62,207 55
Increase 62 51-100 per cent	$38,886 55

For two weeks ending Aug. 14, 1864, the earnings were $189,434 14, against $118,861 14, in 1863—an increase of $71,073 00. From January 1, to August 14, 1864, (10 weeks) the earnings were $1,212,113 16, against $753,782 98 in 1863—an increase of $458,330 18.

The earnings of the Marietta and Cincinnati Railroad for the 2d week in August:

	1864.	1863.
Passengers	$9,070 94	$4,149 94
Freight	9,834 83	5,957 76
Mail, express & telegraph	1,125 58	875 00
Total	$20,031 32	$10,982 70
Total since Jan. 1	$585,497 96	$371,908 61

The traffic of the Great Western Railroad for the week ending August 12th, '64, was as follows:

Passengers	$27,666 72
Freight and live stock	18,889 56
Mails and sundries	1,215 86
Total	$47,722 14
Corresponding week of 1863	38,458 91
Increase	$9,263 23

The earnings of the Racine and Mississippi and Northern Illinois Railroad for the week ending Aug. 7, 1864, were:

	1864.	1863.
Passengers	$2,498 08	$1,693 86
Freight	6,482 14	2,903 04
Express	104 16	75 00
Mails	296 58	296 58
Total	$9,380 96	$4,968 48
Increase		$4,412 48

Receipts from January 1st to Aug. 7:

1864	$327,988 63
1863	199,490 03
Increase	$128,498 60

The earnings of the Michigan Southern and Northern Indiana Railroad for the 2d week of August, 1864, were | $68,000 00
Corresponding week of previous year | 47,000 00
Increase | $21,000 00

The earnings of the Chicago and Rock Island Railroad for the 2d week in August, 1864, were | $54,657 00
Corresponding week of previous year | 31,000 00
Increase | $23,657 00

The earnings of the Michigan Central Railroad for the 2d week in August, 1864, were | $65,542 63
Corresponding week of previous year | 42,349 48
Increase | $23,193 15

The earnings of the Milwaukee and Prairie du Chien railroad for the 2d week in August, 1864, were | $21,678 00
Corresponding week of previous year | 13,709 00
Increase | 7,969 00
Increase since Jan. 1, 1864 | 439,802 00

The earnings of the Chicago and Alton Railroad Company for the week ending August 15th, were:

	1864.	1863.
Passengers	$20,903 97	$14,850 52
Freight	41,726 10	26,746 98
Sundries	1,703 53	2,230 41
Total	$64,333 60	$43,327 91
Increase 1864		$21,005 69

The earnings of the Grand Trunk Railway for the week ending Aug. 13th, 1864, (including the receipts of the Montreal & Lake Champlain and Buffalo & Lake Huron Railways), were: | $101,503 00
Corresponding week, 1863 | 81,584 00
Increase | $19,919 00

The Detroit and Milwaukee Railroad traffic for the week ending Aug. 18, 1864, was | $25,297 07
Corresponding week of previous year | 16,369 64
Increase | $8,927 63

The 7-30 Government Loan.

Many of the advantages of this loan are apparent on their face, but there are others that will be best understood after consideration. Among them there are—

Its Absolute Security.—Nearly all active credits are now based on Government securities. Banks of issue and savings banks hold them in large quantities—in many cases, more than the entire amount of their capitals—and they hold them as the very best and strongest investment they could possibly make. If it were possible to contemplate the financial failure of the Government, no bank would be any better or safer. Savings banks that allow their depositors but five per cent. can only pay interest or principal in greenbacks or notes of State banks. Banks of issue and discount cannot ask or get anything better than Government paper in payment of customers' notes, and they prefer it to all other, for they are compelled to redeem their own notes in that paper as the circulating medium next to specie in value. By the issue of this loan the U. S. Treasury becomes a *Savings bank for the people.* There are none stronger—none more solvent, and not one that pays so *liberally* for the use of money. You may deposit fifty dollars or fifty thousand. The more you put in, the more you will aid and strengthen the Government, and the more valuable will be the remaining currency of the country.

Its Liberal Interest.—The *general* rate of interest is six per cent., payable annually. *This* is seven and three-tenths, payable *semi-annually.* If you lend on mortgage, there must be a searching of titles, lawyers' fees, stamp duties and delays, and you will finally have returned to you only the same *kind* of money you would receive from the Government, and less of it. If you invest in this loan, you have no trouble. If there is no National bank at hand, any banker will obtain it for you without charge, and pay you the interest coupon at the end of six months as a most convenient form of remittance to his city correspondent. If you wish to borrow ninety cents on the dollar upon it, you have the highest security in the market to do it with. If you wish to sell, it will bring within a fraction of cost and interest at any moment. It will be very handy to have in the house.

Its Convertibility into a Six per Cent. Bond.—Here comes an advantage that must not be lost sight of. At the expiration of three years a holder of the notes of the 7-30 loan has the option of accepting payment in full or of funding his notes in a six per cent. gold interest bond, the principal payable in not less than five nor more than twenty years from its date as the Government may elect. For six months past, these bonds have ranged at an average premium of about eight per cent. in the New York market, and are now selling at 110. Before the war, U. S. six per cent. stocks sold at a much higher rate—and were once bought up by the U. S. Treasury under special act of Congress at a premium of not less than twenty per cent. There is no doubt that this option of conversion is worth at least two or three per cent. per annum to the subscriber to the loan, thus increasing the actual rate of interest to about 10 per cent. Notes of the same class issued three years ago, are now selling at a premium that fully proves the correctness of this statement.—*N. Y. Examiner.*

British and American Railways Compared.

In the year 1859 the total length of railway in operation in the United States exceeded the length open in Great Britain in the proportion of about four to three, while the capital invested in railways in that country exceeded that invested in the United States in the ratio of about four to one. Of the aggregate amount of capital then invested in all the railways of the world Great Britain had contributed fifty four per cent, and yet the length of road constructed with this capital was less than twenty seven per cent of the entire length. It thus appears by comparison that the most costly, and by inference the most permanently valuable and efficient railways were those of England. The United States had then six thousand five hundred and sixty five miles of railway open, in which was invested two hundred and sixty millions of dollars, while Great Britain had only five thousand miles open, in which had been invested two hundred millions of pounds sterling. Since then the extent of railway communication in the United States (including those in rebellion) has increased to thirty-two thousand eight hundred and seventy-one miles, constructed at a cost of $1,234,262,610, or $37,549 per mile. In Great Britain and Ireland during the same time the lines have increased to eleven thousand three hundred and eighty-six miles in length, constructed at a cost of $1,775,536,400, or $156,028 per mile.

This enormous excess in cost of construction of the English over the American roads is to be accounted for by the fact that most of our railways were of single lines, constructed in a light and cheap manner, which in England would have been regarded as merely intended to serve temporary purposes; whereas the English system involved the laying of double tracks in the most solid and expensive manner, with a view to permanent strength and a heavy traffic. Nevertheless, in the two countries ours have been thus far the most profitable in their returns.

The respective States from which our roads hold their charters exercise a far greater control over them than the British government does over those under its jurisdiction, and the passage of a railway bill through any State Legislature in this country is generally accompanied by far more bribery and corruption than it would be through the House of Commons. The introduction of railways in England resulted in as many local monopolies of transport as there were distinct companies, and this evil was speedily aggravated by amalgamation. At the present day, therefore, we find every one of the principal lines of railway in Great Britain a gigantic monopoly, protected by act of Parliament and sustained by the public.

Hence railway shares are regarded as safe investments and there stock is held chiefly by a large class, who live upon their dividends, and take little or no heed of fluctuation in the market value of securities. The variations in the quotations for British railway shares on the London Stock Exchange are very slight, owing to this reason and the absence of that speculation which makes the price of railway shares in this country a subject of daily interest to thousands.

The plan of constructing railroads by the undue and premature issue of bonds, which has prevailed to a great extent in this country, has operated very injuriously upon the common stock and the interests of shareholders. The method generally pursued was to pay the contractors twenty-five per cent in cash, fifty per cent in bonds and the remaining twenty-five per cent in common stock. The consequence was that, as the proportion in cash was quite inadequate to carry on the work, contractors exacted much higher rates than they would have done had there been a large paid up

capital to rely upon, so as to cover their loss by the conversion of the bonds into money. Moreover, it was not an uncommon circumstance for from four to six thousand dollars extra compensation per mile to be allowed by railway companies to contractors when the bonds proved difficult of negotiation, and in order to hasten the completion of their roads. This exhausting process usually compelled a resort in payment for labor and material to fresh issues of bonds, based on the expected income of the roads. When, finally, the rails of any particular road were all laid and a light equipment provided, the directors found the line poorly stocked, badly ballasted, and encumbered with a large floating debt. This of course prevented it from doing more for a long time than pay running expenses out of its traffic receipts. Had the work of construction not been commenced till enough capital had been subscribed to pay for the necessary labor and material from month to month as it progressed, the aggregate cost would probably, in the majority of instances, have been at least thirty per cent less, and in others the gain would have been far greater. No wonder, therefore, that we have had, and still have, although in a lesser degree, a considerable number of railways with bonded debts much larger than their capital, and which have defaulted in the matter of their interest coupons. To this credit system pursued at the start the embarrassments of many of our railway companies are for the most part attributable.

In the South the railways were constructed chiefly on a cash basis, and, in consequence, at a cost of about sixty-three per cent of that of the Eastern and Western roads, and fifty six per cent of those of the Middle States.

Thus it will be seen that although the cost of our roads has been high, in comparison with that of those of Great Britain, it might have been made much less, or, rather, much better roads and rolling stock might have been constructed for the same money.

In Great Britain of late years attempts have been made to introduce this vicious credit system into railway building; but they have met with little encouragement. The English have a good deal to show for the capital invested in their railways. They have secured a good, albeit an expensive system, and it yields a handsome return. We have to pay for cheapness in inferiority and lack of durability, and our roads will cost far more in the long run than the British railways.—*New York Herald.*

The Petroleum Oil-Fields at Franklin, Pennsylvania.

In this number of our journal will be found a couple of illustrations of the locality of the petroleum oil-springs at Franklin, in the State of Pennsylvania, that wonderful natural production which has lately given rise to a most lucrative commerce. The qualities of petroleum, or mineral oil, are, indeed, by no means a modern discovery, and its existence in many parts of the globe, especially in some countries of Asia, has been proved by the instances of spontaneous combustion, which many ancient historians have recorded. In the Island of Trinidad, in the State of Virginia, and at Enniskillen, in Western Canada, there is abundance of this valuable product; but for a long time no efforts were made to obtain for the use of mankind. It was not till 1857 that operations were commenced for the distillation of the bitumen at Enniskillen, and the operators then speedily discovered that by sinking wells a similar material might be obtained in a fluid state. Large quantities of oil were thus procured. Two years later a well was sunk to the depth of seventy feet, in Venango County, Pennsylvania. The oil flowed with such force that for many weeks 1,000 gallons per day were obtained from this well. Other wells were speedily sunk, many of which yielded large quantities of oil. In some districts the earth is saturated with the oil, and occasionally, a porous sandstone or limestone will yield considerable quantities. More commonly, however, the oil is collected in fissures in the rocks, at various depths below the surface. In some cases an ample supply of oil is obtained at a depth of 40 feet, while other wells are sunk as low as 120 feet to 160 feet deep. At Titusville, Pennsylvania, there are wells of the depth of 590 feet. Usually, when the oil is reached, the pressure of the gas in the fissure forces it up, and it flows for some time to the surface. As soon as the oil has ceased flowing, a pump is employed. Sometimes the oil continues to flow spontaneously, and with such force as to defy every effort to control it. The quantity of oil yielded by the wells varies, however, considerably, some wells producing only ten barrels per day, and others as much as 300 barrels.

The apparatus to be seen at Oil Creek is of a simple description, consisting of large wooden cisterns sunk in the ground to receive the oil which rises through tubes let down into the borings. It is then drawn from the cisterns and put into barrels for exportation. The cisterns are covered, to prevent evaporation, and their leaking is ingeniously prevented by surrounding them with a trench full of water, as the greater specific gravity of the water forbids the oil to escape through it. The casks or barrels of crude oil are conveyed from the Franklin and Titusville stations by the Atlantic and Great Western Railway—a branch of which, fifty-four miles in length, has lately been constructed for this traffic. The Atlantic and Great Western is a line of 400 miles, to Salamanca, on the New York and Erie line, connecting the great town of Cincinnati, and that of St. Louis, still farther west, with the port of Cleveland on Lake Erie and with the railway to New York, by which an immense export trade in grain and salt meat is carried on. This important means of communication between the most productive region of the western continent and the Atlantic seaboard was formed by a company of which Mr. James M'Henry, of London, and Senor Salamanca, the well known Spanish capitalist, are the chief promoters. They began their work in the spring of 1862, taking five thousand English "navvies" to America for the purpose. They obtained the requisite funds by mortgaging the first section of the line when completed, allowing 7 per cent. interest on their debentures, and relying upon the high profits which a railway passing through this district—the gateway of the north-western States—was certain to yield. Their operations have been effected with extraordinary rapidity and success, notwithstanding the civil war. Two hundred miles of railway were constructed in as many days before the end of 1862, and 145 miles were added in the course of 1863. The line is now opened throughout its entire length, traversing the fertile States of Pennsylvania and Ohio, and enabling goods or passengers to travel from New York to St. Louis, near the confluence of the Mississippi and Missouri, without a change of carriage. The corn of the Western States, the coal and iron of Pennsylvania, and probably, when peace shall be restored, some of the cotton of the South, will by this means find its way, along with the petroleum oil from Franklin and other stations, to the main outlet of American maritime commerce. The Oil Creek branch alone has just paid a dividend of 25 per cent. on its first year's working. The New York and Erie, and the Ohio and Mississippi lines, by the completion of the Atlantic and Great Western, which links them to each other, have greatly increased their traffic. For the readier conveyance of the petroleum oil to the railway stations in the oil-producing district, the company is now laying down iron pipes, through which the oil will be forced from the tanks at the wells by powerful steam-pumps. These parts of the apparatus cannot, of course, be shown in our engraving. During the past year the Atlantic and Great Western Railway has carried more than half a million barrels of petroleum oil, which is not one-third of the product of this wonderful region.

The petroleum oil is sent from America in a crude state, just as it pours out of the earth. The business of refining and preparing it for use is extensively carried on in England and France. The London Hydrocarbon Oil Company, in their manufacturing establishment at Southall, apply to the American oil a patent process of distillation, by which the pure transparent liquid known as *cazeline*, giving a most beautiful light, is disengaged from the grosser elements of the petroleum, as well as from the spirituous part, which yields an explosive gas. The latter substance is largely employed instead of turpentine for various manufacturing purposes, while the cazeline is burned, without the slightest danger, in the lamps on our drawing-room tables, free from smoke and smell. Nor are these the only uses of the petroleum oil. Experiments have lately been made, by order of the French Government, to test its value as fuel for the engines of their steam navy. It has been proved that a given quantity of this substance will generate, in half the time, as much steam as could be produced by burning twice the weight of coal. It seems likely that the introduction of this portable fuel will have a great effect upon the development of steam navigation. The Southall works alone can refine fifty thousand barrels yearly.—*Illustrated London News.*

☞ An additional rail for the Montreal and Champlain Railway, over the Victoria Bridge, had been laid down, and the trains commenced running over narrow gauge on the 1st inst.

Portage and Columbus Railroad.

On the 8th inst., the workmen on the railroad between this city and Columbus finished laying the track, and the work of ballasting is rapidly proceeding, so in a short time we shall have the cars running from Milwaukee to LaCrosse *via* Columbus and Portage. The grading on the road twelve miles out from Milwaukee is nearly completed, and the track laying will soon commence. When this is completed, the Milwaukee and St. Paul Company will have an indepen lent route from LaCrosse to Milwaukee. A union depot is being constructed at the latter place, which will be an acommodation that the public has long demanded.—*Milwaukee Wis.*

☞ Wm. B. Stearns, Esq., has been chosen president of the Fitchburg Railroad Company, in place of John J. Swift, Esq., resigned.

☞ There were coined at the British mint in the year 1863, 5,921,669 sovereigns, 1,371,574 half sovereigns, 938,520 florins, 858,320 shillings, 491,040 sixpences, 4,158 fourpences, 954,888 threepences, 4,752 silver twopences, 7,920 silver pence, and of copper coins 28,062,720 pence, 15,948,800 halfpence, and 1,483,600 farthings. There have been coined in the last ten years 47,629,614 sovereigns and 12,068,970 half sovereigns. Also 18,069,370 florins, 20,188,393 shillings, 16,787,520 sixpences, 1,887,694 groats, 41,580 four-penny pieces, 18,495,796 threepences, 47,520 twopences, 79,200 pence, 479,670 threehalfpenny pieces, together in value 3,002,287*l.*, and the cost of the silver metal was 2,957,900*l.*; also, 186,725,120 copper pence, 164,502,685 halfpence, 48,041,152 farthings, and 1,591,296 half-farthings, the value of the copper coin being 958,065*l.*, and the purchase value of the metal 466,543*l.*

☞ The number of locomotives in England has thus increased: in 1860 there were 5,801; in 1861, 6,166; in 1862, 6,398. The locomotive is found to have an average durability of twenty years; and about five hundred are yearly replaced, independently of additions to the stock in service. The export of English locomotives has steadily increased. The price of a locomotive in England now ranges from £1,100 to £1,800. From twelve to thirteen thousand engineers and stokers are known to be employed, making a total of some sixty thousand human beings dependent for their livelihood on the iron leviathan.

American Railroad Journal.

Saturday, August 27, 1864.

Stock Exchange and Money Market.

While our own financial condition is made the subject of continued speculation and inquiry, and while its anomalies puzzle the wisest heads, there is reason to believe there are general causes to which some of our difficulties may be attributed. There is in fact a disturbance in finance and commerce to a considerable extent all over the world. Large as has been the production of gold since the discoveries in California and Australia, the demand for it seems to increase in an advancing ratio. Commerce is multiplying commerce to an extraordinary extent, and it is beginning to be inquired whether its wonderful and energetic expansion does not require some other standard, equivalent or medium, than the precious metals, since their presence or absence at any particular moment, makes an instant change in the values of articles which have required a uniform amount of labor, and a uniform amount of material, whether the balance of gold and silver in a country be large or small, whether there be large resources of it or whether they are completely drained.

We are led to look into this subject from having received by the last steamer a remarkable and original essay from the pen of a London journalist on the subject of its finance and currency. This seeks to discover why with such enormous wealth, and such an increasing trade, England is continually in a financial flutter, why there is such a continued excitement in the money market, such a tendency upward in prices, and such an enormous difference from day to day in the commercial value of funded and other readily convertible property. We propose to extract the following passage as an illustration of the author's opinions, believing that they will be found more than usually original, and very suggestive to American thinkers.

He commences by saying "this is a wonderful year for England. Our exports and imports are double what they were fifteen year ago. In the single month of June the exports have increased £3,210,000 in two years. In six months they are greater £21,000,000, or nearly 40 per cent. Our revenue has enlarged materially under diminished taxation. There are extensive stocks of old corn still unconsumed; and the prospect of the coming harvest, although varied, still foreshadows an average crop. There are no symptoms of wildness in our speculations. We avoid foreign loans. Joint-stock companies, indeed, spring up around us; but these are established not to enter upon new ventures, but to command adequate capital for the purpose of developing more effectually the resources of undertakings whose solidity and success have already been fully proved.

And yet he remarks.

"In the midst of circumstances, every one of which indicates soundness of trade, and the solidity of our speculations, the price of money is permanently high, the market is eminently sensitive, the rate of discount fluctuates with all the uncertain flutter of heart disease, the price of money is scarcely the same for a week together. We never had so much money—we never have been so little able to reckon upon the value of it. When we had not so much as one-fifth of our present quantity, the price did not vary so much in years as it now does in weeks. This is no mere speculative inquiry. It is not a currency crotchet, or a mere theorem of abstract financial economy. These *capricios* of our banking system sensibly and instantly affect every transaction and the price of every commodity. A rise of 1 per cent. in the rate of discount takes at once £2,000,000 from the price of Consols, and reduces the selling value of shares and stocks at least 3 per cent. Cotton, grain, tallow, wool, are all affected to even a greater extent; and, in fact, there is not a chandler's shop that is exempt from the influence of the change. Nor is it foreseen even by those who produce it. No prudence can provide for it. The Bank that fixes the rate has no knowledge of, no control over, the causes which compel its course of business. It is the sport and creature of external influences, and it makes the whole country the victim of its own precarious position.

The late advance in Bank interest was attributed to a call for five hundred thousand sovereigns, from the Spanish Bankers, and this small drain, such as this country stands month after month without wincing or showing signs of weakness, threw down "the price of all stocks and produce to the extent of at least forty millions sterling." So says the well informed writer.

Vexed with these incomprehensible incongruities, these constant contradictions, this continual refutation of the theory of the laws of demand

and supply, with its various other consequences the writer further remarks:

"This nuisance has become, at last, altogether intolerable. The rate of discount changes, not as formerly, with a cycle of years, but from week to week. There have been as many fluctuations in the one year, 1864, as there were in the first quarter of the nineteenth century. To one of two causes the oscillation is obviously attributable. Either it is the result of the bank being allowed to issue promises to pay £14,000,000 of gold for which it has no representative in its coffers—or of our basing our currency upon specie at all. A gold currency may be best, or a paper circulation may be preferable; but a mixed system, that is neither the one nor the other, must be radically vicious and embrace all the evils of both. Practically the currency of this country in Bank of England and provincial notes and bills of exchange is estimated at £800,000,000 sterling. It is quite obvious that to make £20 000,000 or £30,000,000 of specie the basis of such a system is preposterous—is, in fact, making the cone to perform the function of the base of our financial economy. First come first served. It only requires that a capitalist should possess himself of £14,000,000 of the Bank of England notes, to force it to stop payment, and induce a national bankruptcy in a country that has eight thousand millions of property to meet its engagements. In fact, within a few years the bank did virtually stop payment until an order in Council authorized it to break its charter."

The writer seems to be at a loss for a conclusion to be derived from his own facts. An enormous trade, and an immense influx of gold do nothing to create stability but rather the contrary. Money ever so plentiful is no cheaper, or steadier in character or more reliable as a standard of value. He says:

"As its quantity increases, as the command of it becomes facilitated by its abundance, it ought, if high, to be also steady in its price. Where a supply is small, and a market limited, we could look for jerks and starts, sudden inflation, and unexpected collapse. But when the world produces as much gold in a year as it formerly did in a century—when every country, by rail, steam, and telegraph, is brought to less than half its former distance from all others—when the rapidity of transit *renders the keeping of large stocks and floating cargoes unnecessary, and thus disengages much capital*—when the multiplication of banks, deposits, bills of exchange, and negotiable documents, has expanded our currency, virtual and nominal, to many hundreds of millions, we certainly looked for much steadiness of price, and for an entire exemption of a market so vast from the sensitiveness and fluctuations incident to a limited radius of transactions. It is a fact—and we want to know how it comes about—that, as the quantity of the commodity increases, the price becomes more uncertain; that the greater the number and variety of our operations, the more fluctuating and unreliable are the conditions of business."

We have quoted enough of this article at this time to show the singular condition of the British money market, and the precariousness, in fact, of a large description of British properties, which are influenced by that money market. It is sufficient for our present purpose to ask the consideration of this article by those who see nothing but embarrassment and perplexity in American finance, and nothing but prosperity everywhere else.

We have in this three years' contest raised enormous sums among ourselves, armies such as no other modern struggle has witnessed, and we venture to say developed at the same time an amount of resources of which we ourselves were ignorant. We believe our securities are in the end to be more valuable than those of any other country in the world, and while most other kinds, such as railway shares and bonds have become intrinsically worth more than ever, there is no danger to be anticipated from investments in iron mines, coal mines, real estate, mills and machinery, which whether valued in paper or gold singularly enough are bought and sold at nearly the same prices at which they were held before the war. So that we have had a wonderful stability exhibited, all things considered. In the confederate States all other property rose in paper as paper multiplied. Here it is far otherwise, except in the cases of certain imported and taxed articles, and articles of necessity with which capital, combination and speculation have shamefully tampered.

The condition of the National Treasury is encouraging. Mr. Fessenden finding his gold increasing far beyond his wants last week gave relief to the market by disbursing the interest due in September on the 10-40's, and that due in November on the 5-20's without rebating the interest. This was a wise, confident and beneficial movement which will not only tell on the credit of our securities at home but abroad, and is an American mode of doing business that is not common in any other borrowing country in the world. Sixty days interest on the November dividend is a very handsome profit to the foreign as well as domestic creditors, and no finance minister would venture on such a step, if he did not feel strong assurance in his resources and income. The speculators in gold felt the blow and responded to it by submitting to a heavy decline. Both classes of Government bonds on which this interest was paid in anticipation advanced several per cent.

The aggregate value of the imports of general merchandise, other than dry goods and specie, at this port for the week ending August 18, was $1,749,304.

The amount of exports from New York last week was $6,808,867 against $2,967,762, and the specie shipments were only $44,000 against $316,000 for the same week in 1863. The exports since January 1, have been $134,170,549 against $115,997,350, an increase of $18,137,199 on the same period in 1863. The customs gold revenue at New York, specifically pledged to the payment of the interest on the funded and fundable debt of the United States from January 1 to August 20, was $50,068,251, an increase of $16,850,548 on last year.

The value of foreign goods imported into the port of Boston for the week ending August 19, was $539,841, against $296,317 for the corresponding week in 1863. The exports were $899,953, against $171,142 for the corresponding week in 1863.

The foreign exports from the port of Baltimore during the past week were valued at $118,600.

☞ The grading of the extension of the Middletown Railroad, from Berlin to New Britain is nearly completed.

Lexington and West Cambridge Railroad.

The annual meeting of this Company was held in Boston on the 3d inst., at which the following statement was submitted:—Amount paid on account of passenger department, $3771 45; freight department, $2111 05; dividends, $3165; total expenses, $28,812 22; balance on hand July 1, 1863, $2865 91; receipts of passenger department, $17,302 67; freight department, $3658 31; total receipts, $22,472 09; balance on hand July 1, 1864, $1482 28. The gross earnings of the road have been $29,267 68, an increase over last year of $5312 09. Repairs on the road the last year have amounted to $5535 91; locomotives and passenger cars, $3557 88. The following gentlemen were elected Directors: Samuel Butterfield, A. W. Tower, F. B. Hayes, Addison Gage, G. Washington Warren.

☞ In consequence of the large amount of coin held by the Government in New York, Philadelphia, Boston, etc., and the daily accumulating receipts from customs, Secretary Fessenden has ordered that the coupons due November 1, on the 5-20 loan, as well as the coupons due September 1, on the 10-40 loan will be paid on presentation without abatement of interest. The sum total of interest thus anticipated, together with the interest due October 1, on the 7-30 Treasury notes of 1861, then due, is $19,572,707. The customs duties at New York and all other points in August, September, and October last year, were $26,148,790. This season they will not be materially less.

☞ The Saratoga and Hudson River Railroad Company are now prepared to let the grading and masonry on about twenty one miles of their road, in Albany and Greene counties. The work is of a desirable character and will be disposed of in contracts of from two to five miles. Profiles can be seen and full information given at the office of the company, in Athens, opposite Hudson, N. Y.

☞ A meeting of the Stockholders of the Indiana Central Railway Company will be held in Indianapolis on the 17th of September next, to vote upon a contract made by the Board of Directors of said Company, and ratified by said Board at its meeting on the 10th of August, 1864, with the Columbus and Indianapolis Railroad Company of the State of Ohio, for the consolidation of said Companies and their roads, and property, &c., into one Company and Corporation; and such other matters relating thereto, or as may come before them.

☞ According to a statement compiled from official records by the *Journal of Commerce*, the amount of specie in the New York banks and Sub-treasury, Jan. 1, 1864, was..... $37,992,534
Received from California..... 6,534,216
Imported from foreign ports..... 1,555,066
Gathered in from hoards..... 16,915,684

Total supply Jan. 1 to Aug. 1, 1864 ..$62,997,500
Exported to foreign ports..... 31,099,450

Leaving in banks and Sub-treasury Aug. 1, 1864 ..... $31,898,050

☞ The Marquette and Ontonagon Railroad will be completed to the St. Clair Iron Mountain early this fall, and the grading of the next ten miles done during the next winter. The work on that road is now progressing finely, the track layers following up the construction corps very closely.

Railroad Forfeiture, Pledge Lien Interest. Corporations Contract.

The case of The Vermont and Canada Railroad Company, against The Vermont Central Railroad Company and others, was an appeal from the decree of the court of Chancery of Vermont. The bill was brought in April, 1855, and set forth that the orators were incorporated by an act of the Legislature of that State, approved October 31st, 1845, and that the Vermont Central Railroad Company was incorporated by the same Legislature, by an act approved October 31, 1843. That certain articles of agreement were duly entered into by those corporations on the 24th of August 1849, the 11th of January 1850, and the 9th of July 1850, respectively.

BARRITT, J. Under the lease of August 24 1849, and the addition thereto of July 9, 1850, the orators, with the co-operation of the Vermont Central Railroad Company, proceeded in the completion of their road from Essex Junction to Rouse's Point, and, upon such completion, the Vermont Central Company took possession thereof, and by themselves and the trustees under the first mortgage, with the incidental interposition of the court of Chancery, have continued to possess and operate said road to the present time. The first and second mortgages were both made subject to the rights and duties provided and stipulated in said lease and the addition thereto. The bonds that were issued by the Vermont Central Company were upon the security created by the said mortgages respectively, and the rights of the bondholders in reference to such security are created by, and derived through said mortgages. The rent was paid to June 1854. That falling due in December, 1854, remaining unpaid for more than four months, this bill was brought to enforce the security for the same, created by the indenture of July 9, 1850, and was entered in the court of chancery for Franklin county, June Term, 1855. In the meantime no rent has been paid since that which fell due, and was paid June, 1854.

The Vermont Central Company and the trustees under the first mortgage, in argument before this court, admit the legality and binding force of the lease of August 24, 1849, and also of the idenure of July 9, 1850, so far as it was designed, and may operate to give security upon the earnings of the roads for the payment of the stipulated rent. They object to possession of the roads and property being given to the orators under the last indenture, claiming that to that interest the contract is illegal and valid. They also object to the claim as made by the orators in respect to the cost of construction, and to their claim for incidental expenses. The second mortgage is not represented in this court. A bondholder under the first mortgage, made answer to the bill, and appeared in the court of Chancery, standing upon the bill, his answer and the proofs taken in the case, so far as they were pertinent to the issues made by his answer. A leading point made and urged by the learned counsel for this bondholder, in the argument is, that the indenture of August 24, 1849, and of July 9, 1850, are not valid, and never were binding on the Vermont Central Company, by reason of being *ultra vires* of either corporation to make, though their validity is not put in issue on this ground by his answer. It is too late to question the doctrine that a corporation has only such

powers, as were conferred by the power that has created it. By the original acts of incorporation, neither of the parties were endowed with the power to enter into such contracts of lease and security as were made in this case. If this case was standing only upon the original acts of incorporation, they would be subject to impeachment for invalidity, in behalf of parties sustaining such a relation to either of the companies, and to the contracts as to entitle them to question their validity. In considering this subject as it is presented in the argument, a distinction is to be noted between the invalidity of a contract resulting from the want of capacity to make it, and that resulting from its being in violation of law, or contrary to public policy. If such contract is not in violation of some public law or contrary to public policy, it would seem that only the immediate parties to it, as the corporations themselves or the stockholders, who are parties by representation, would hold such a legal position in relation to it as to entitle them to raise the question of validity on account of the want of capacity while on the other hand, if such contract was in violation of ome public law, or against public policy, in such sense as to make it void, and of no efficacy to any intent, any person standing in a relation of interest to the subject matter of the contract and to be affected by its operation might undoubtedly set up and insist on such fatal vice in it, for the purpose of clearing himself from the consequences of its being carried into effect. Though the original acts of incorporation of the two railroad companies do not provide for such contracts as were made in this case, still they do not in terms prohibit them. Whether it was or was not competent for the legislature, by subsequent general or special enactments, to vary in this respect the powers and capacity of the corporations, without their assent thereto, it certainly would not be *unlawful* in the sense of being in violation of some public law, or contrary to public policy, as those terms are used in relation to such subjects, for the corporations to exercise any powers or rights conferred by such subsequent legislation. So far as one corporation, as an immediate party to a contract made in the exercise of such powers or rights, should, concurrently with the other party, assent so the legality of such contract, it is difficult to see upon what principle, a party holding under such corporation, by virtue of a contract that especially recognizes the existence of such prior contract, and the rights and duties thereby created, and in express subjection to them, can be permitted to impeach its validity and binding force. As between the two corporations, both conceding and asserting the lawfulness of the contract to which they were parties it would seem that no plausible pretext could be assigned why they might not have a sure standing in the courts for the enforcement of their respective rights created by such contracts. Suppose, in the present case, that there had been no mortgage to secure the bonds issued by the Vermont Central Company, who but the corporation, or its individual corporators, could have denied the validity of the lease, in defence to the enforcement of its provisions. And can a party who stands upon a security taken in express subjection to that lease, and the rights and duties thereby created, stand upon better ground than the one giving the security, so far as the question of the validity of the lease depends on the question of lawful capacity to make it? The act of 1847, provides in terms that "all railroads incorporated, or which may be incorporated under the authority of this State, shall have power to make contracts and arrangements with each other for leasing and running their roads on any part thereof," etc.

This, in terms, does, and clearly in purpose was designed to confer the powers named upon corporations then already existing. This, of itself, is conclusive upon the question of *public policy* in this respect, as well as upon the question of *lawfulness*, in the sense in which it has been thus far considered.

It was competent for the corporations, by the unanimous consent of their stockholders, to accept such additional powers conferred by a general law, and exercise them with the same efficacy, to every intent as if they had been conferred by the original act of incorporation. It is shown by the evidence that the corporations did exercise these powers in making said contract of lease and security for the rent, and that, too, by a direct action of a stockholders' meeting, called and held for that purpose. Such exercise of those powers is, in the absence of any averment or evidence to the contrary, sufficient ground for assuming that the corporations as such, had accepted them as a part of their organic law, and particularly is this assumption well made, since no member of the corporation has ever interposed any protest or dissent. The ordinary rules of presumption require this until the contrary is asserted by some party lawfully competent to make issue upon it, and who does make and maintain such issue in a mode and by means warranted by the law.

We are unable to assent to the criticism made as to the character of the notice of that meeting. It seems to us that it comprehensively indicates in substance the matters to be acted on, to the full extent of the action that was contemplated or taken. It does not seem adapted to mislead any body interested and having a right to participate in the action contemplated, nor do we discover in it, or in the circumstances and occasion, evidence of any sinister or improper intent on the part of those at whose instance the meeting was called. That no one of the stockholders was in fact misled by it, or dissents from the action there taken, is clearly evinced by the fact that no one has ever, by any form of proceeding, asserted any immunity against that action or the consequences flowing from it. Inasmuch as that meeting of the stockholders was properly called, and all had an opportunity to be present and act upon the subject of it, and as the vote of those present was without any dissenting voice, and as no one of them has since, in any form objected to the action then had, it is to be taken and held for the purposes of this case, that all the stockholders concurred in that action, and that they assent to its effect for all legitimate purposes touching the rights, either of the corporation or of themselves individually as members of such corporation; Redf, on Railways, 11; 11 Vt., 302; Ang. and A. on Corp., Sec., 238, 1. The ground on which it is held that an original charter that has been acted upon by the organization of the corporation under it, and by the investment of funds in its capital stock in pursuance of its provisions, and for the accomplishment of the prescribed purposes of its creation, cannot be materially altered by subsequent legislation, so as to bind the corporation itself, or the individual corporators, without their assent respectively, is, that as between the State and the corporation, the original charter becomes a contract mutually obligatory, and that, as between the corporation and the stockholders, it is matter of contract that the corporation shall administer the funds and exercise the functions according to the provisions, and in accomplishment of the purposes prescribed by the charter. The stockholder has distinct individual rights as against the corporation, growing out of that relation, which he cannot be compelled to yield or forego without his assent. In this respect he is not subject to the will or vote of the majority. It is only to matters within the prescribed limits of corporate power and capacity, that he, as a stockholder, becomes on common principles subject to the vote of the majority. Standing upon these rights and in the exercise thereof, he may, at his pleasure, and effectually, assent to, or dissent from measures adopted by corporate vote in the usual mode. But this is personal to himself alone, unless by priority of personal contract with him, another obtains this his personal right. In the present case the bondholders stand in no relation of priority with the individual stockholders, in reference to the rights above referred to. They hold their relation of interest in virtue of their contract with the *corporation* itself, evidenced by the bonds held by them, and the mortgage given by the corporation to secure them. They came into that relation after the enactment of the general law conferring the enlarged powers in question upon railroad corporations, and after the exercise of those powers by said corporations in the making of the contracts of lease and security for rent, and in express subjection to those contracts. Those contracts, then, in relation to the bondholders, so far as their validity depends on the capacity of the corporations to make them, must stand upon the action of said corporations in exercising and adopting the additional powers conferred by the general law of 1847, in pursuance of which said contracts were made.

It seems proper in this connection, to notice a point much and mainly urged in the argument, viz: that the indentures are not what they purport—*a lease* and security for *rent*; but are a pretext and cover under which, in point of fact, the Vermont Central Company went on and built, with its own funds and means, the Vermont and Canada Railroad, the same as if the latter company had not existed, the pretended taking of stock in that company being, in fact, a loan of money by the stockholders to the Vermont Central Company at a guaranteed interest of 8 per cent. This being assumed to be the true character of the transaction, then it is claimed and argued that this is beyond the powers conferred either by the original charter or by the general law of 1847. It is, perhaps, true that the stockholders expected to get 8 per cent. on their money invested in the purchase of stocks, and that the provisions for rent, according to the practice of the Vermont Central Company and the trustees, in the payments made by them under the lease, would substantially accord that to them. But we fail to find sufficient ground for sustaining the

point thus made. The instruments themselves purport in their provisions to be a *lease* of a road then already chartered and located, with stipulations as to its being seasonably completed, and in a lawful and proper manner, all to be done with the money and means of the Vermont and Canada Company. The reason which induced the Vermont Central Company to enter into this arrangement cannot vary the true character of the transaction as it was consummated between the parties. It was important for the Vermont Central Company that the Vermont and Canada road should be built. The latter company as depending on the ultimate character and profitableness of the road as an independent enterprise, in the condition of the public mind then prevalent as to railroad stocks and securities, found itself unable to dispose of its stock to a sufficient extent to realize the necessary means for constructing the road. In this condition of things the Vermont Central Company deemed it advisable to propose, in a mode provided and authorized by law, to remove the cause for hesitating and declining to take the stock by taking a lease of the Vermont and Canada Railroad, paying a rent therefor that would render the stock a safe and eligible investment if the latter company would go on and make it. Being satisfied that, under such a contract of lease, it could proceed with the enterprise of making the road in reliance on the sale of the stock as the ultimate source of means with which to do it, the Vermont and Canada Company entertained the proposition, and the indentures were accordingly made. That the means thus raised, in fact disbursed the cost and expense of making the road is not denied. But it is claimed that all this was only a kind of machinery by which the Vermont Central Company in fact had a *loan* of the stockholders of the Vermont and Canada Company of the amount of money thus raised, at an interest of 8 per cent. If this be so, it is noticeable as a peculiarity of *this* loan that there is no obligation or duty ever to pay the principal. It is also noticeable that the Vermont Central Company have no title or ownership of the road, depots, lands and appurtenances, except what is created by the indentures, and that is of a mere lease-hold. It is particularly worthy of notice that all the stipulations in the indentures, as well as all that has been done in pursuance of them, are as consistent with the character of *a lease* to be given to the transaction, as that of a *loan* of money by the Vermont Central Company. The fact that the Vermont Central Company advanced money for the current expenses to some extent, while the road was in process of construction, in reliance upon Vermont and Canada Company stock, and sold some of that stock at a discount as a mode of raising funds, does not, as matter of law, vary the character of the indentures. This could be regarded at most, as a temporary advance or raising of money for the Vermont and Canada Company under arrangements for the time being, to which only the stockholders of the Vermont Central Company would have the right to make objection, and that too at the time of the transaction, and would not fix or taint the character of the arrangement created and evidenced by the indentures. We see nothing in the case requiring, or that would warrant the court to give to the transaction the character imputed to it, or to hold it to be other than the indentures give to it—*a lease.*

As to the indenture of July 9, 1850. It is obvious that one leading purpose of the instrument was to make "reasonable security" to the Vermont and Canada Company for the payment of the stipulated rent. The question whether it was competent for the Vermont Central Company to contract for the pledge of "all tolls, fares and other lawful income receivable for the use of said railroad," after paying the expenses of running and keeping in repair, and furnishing proper furniture for the payment of the rent in arrear, runs clear of, and is distinct from the question of the right of that company to convey in mortgage its property, franchises, easements and privileges with the possession thereof. The Vermont Central Company and the trustees under the first mortgage, concede the right to make such a pledge, and admit the validity of the indenture of July 9th, 1850, as such pledge of the tolls, fares and income. Mr. Sohier, (the bondholder,) avers nothing to the contrary in his answer. His counsel in the argument do not question the *right* in this particular and to this extent. They question and deny the validity of the instrument as a conveyance in mortgage of the property, franchises, easements and privileges, with the right of possession as being *ultra vires*, and also for the reason that if enforced in that respect, it would substantially transfer the railroad, and all the property, franchises, and privileges of the Vermont Central Company, to the orators without consideration.

The argument predicated upon the alleged want of consideration, would legitimately apply to the right of the orators to enforce the instrument in its feature of a pledge of the tolls, fares and income as well as to the other features, viz: that of a conveyance in mortgage as before named. But it is to be noticed that the bondholder in his answer, does not aver any want of original consideration as a ground of invalidity of either of said indentures. In this state of the case the duty is not incumbent upon the court to discuss or decide questions that are not brought in issue by the record.

Before discussing the questions raised upon the answer as to the rights of the orators, as affected by the alleged *failure* of consideration, it seems proper to consider the point made by the answer, that by reason of non-compliance with the requirements of the 2d section of the act of November 18, 1858, the orators' charter is forfeited. Whether forfeited or not depends on the effect to be given to the provision in the 2d section of the charter, and the subsequent legislation in respect thereto. The language is, "If the company shall not, within five years, commence the construction of the road, and shall not within 13 years complete and put in operation said road connecting, &c., then this corporation shall cease, and this act be void." The act of 1858 substituted a new section for that 2d section, giving the company further time, and prescribed more particularly the manner and conditions of the connection to be made in Burlington with the Rutland and Burlington Railroad, and providing that, unless the provisions of that act of 1858 should be complied with, the company should take no benefit from the act. If those provisions were not complied with, then of course the matter stood the same as if that act had not been passed. By an act of November 25th, 1858, it was provided, that, in case the company shall fail to comply with the provisions of said act of November 18, 1858, *and its charter shall thereby become forfeited*, it shall be lawful for the receivers and managers of said road to continue to operate it until January 1st, 1860, and until otherwise provided under the direction of the chancellor, who may require such persons to give bonds, &c. "*Provided*, nothing in this act shall be construed to give effect to the same, only in the event of the forfeiture of the charter of said company." It is claimed that under these acts the non-compliance with the 2d section of the charter, and of the amendment of it by the act of November 18, 1858, operated as a forfeiture, without the intervention of any proceeding in that behalf.

Whatever may be the legal consequences of such non-compliance, we do not understand from this peculiar form of enactment that the legislature have undertaken to *declare* a forfeiture, but only to prescribe the consequences to flow from certain acts and omissions. Whether such acts and omissions had in fact occurred the legislature did not assume or design to determine. Whether they had occurred or not was left to be determined upon proofs to be adduced in a proper proceeding to be instituted for the purpose of testing the question of forfeiture. It is beyond question, that unless the legislature undertake to declare a forfeiture upon facts that have already occurred, it appertains to the judicial department of the Government to determine whether such forfeiture has been incurred. When the act of the legislature only prescribes the elements which shall operate as a forfeiture, whether such elements exist or not is an open question, which the party against whom they are alleged has a right to contest before a judicial tribunal. The provision in the act of November 25th, 1858, as to its being lawful for the receivers and managers of said road to continue to operate the same under the direction of the chancellor, is entirely consistent with this view, and was as necessary in case of a forfeiture declared by the court as by the legislature, until further provision should be made for the operation or disposition of said road after the taking of such forfeiture. Again the intention of the legislature on this point is quite clearly indicated by its further action on the subject in 1859, when, instead of either assuming or declaring that a forfeiture had occurred, they proceeded again to amend the 2d section of the charter by providing and prescribing further time, and other modes of completing the road into Burlington, and making connection with the Rutland and Burlington Railroad; in failure to do which, the same language is used as in the original charter, and in the act of November 18, 1858, viz: "then this corporation shall cease, and the charter thereof be void"—language quite inappropriate, if in the understanding and intention of the legislature, a forfeiture had been already taken by force of the prior action of the legislature on that subject. A forfeiture of a corporation can only be taken in behalf of the public, and by some form of proceeding to which the public, by proper representation, is the party moving it, and in which by competent authority such forfeiture is declared. Inasmuch

as the legislature have not in this case undertaken to declare such forfeiture, it is needless to discuss whether in such a case as this, it appertains to the legislative department of the Government to take upon itself the exercise of such a prerogative. Regarding the orators as a still existing corporation, under their charter and the laws of the State, it becomes unimportant to consider the argument of counsel, predicated upon the assumption of the extinction of the corporation by forfeiture. Assuming what is not controverted in the answer of this bondholder, (Mr. Sohier,) and is admitted by the Vermont Central Company, and the trustees under the first mortgage, that the indentures of August 24th, 1849, and of July 9th, 1850, are not affected with any want of original consideration, it is to be determined whether by what has occurred since their execution and delivery, the orators have lost their right under them to claim the rent and the security thereby stipulated and provided. It is clear from those instruments, that it was the understanding and design of the parties, that the Vermont Central Company should pay rent at 8 per cent. on the cost of such portions of the road as should be accepted by them in the manner provided therein. The road was constructed and accepted accordingly from Essex Junction to Rouse's Point; and thereupon the Vermont Central Company went into the possession and use of it as thus constructed, and by themselves and assigns have had the possession and use ever since.

In the absence of any vice or illegality in the contracts under which the road has been used, and in the absence of any averment or evidence of fraud or bad faith towards the bondholders, if the orators are to be precluded from enforcing the security provided for the payment of the rent, it is to be by force of some stringent rule of law.

As to the neglect of the orators to build and complete their road so as to meet the Rutland and Burlington Railroad in the village of Burlington, and to connect the same with the Canada line in Highgate, within the time limited in the original act of incorporation, and in accordance with the covenants of the orators contained in said indentures by reason of which it is claimed that the Vermont Central Company has become wholly absolved from all legal or equitable duty to perform any of the covenants in said indentures, and the same have become wholly void and inoperative:

It is obvious from the indentures taken together, and particularly from the last item of agreement in that of July 9, 1850, that the parties did not contemplate the building of the road other than from Essex Junction to Rouse's Point, unless as matter of necessity in order to save the corporate existence and rights of the Vermont and Canada Company, to an extent sufficient to enable the Vermont Central Company to enjoy the road under the lease. The substantial thing was the road from Essex Junction to Rouse's Point. If it should become necessary to build more, in order to a compliance with the law binding upon and to be enforced against the orators, then such additional road, when built, was to be the subject of rent, the same as that then already located and in the process of construction. In view of any evidence in the case it is not pretended that the Vermont Central Company, or any party or interest in priority with it, has as yet suffered any detriment by the failure to locate and make the residue of the road within the prescribed time. The Vermont Central Company and the trustees who appear in this Court, are making no claim against the right of the orators to the rent, and the security therefor on this account. Up to the present time the lease has yielded all the benefit to the lessees and their assigns, that was originally provided or designed by it. They have had all the use they expected or wanted, and all that they desire to have hereafter as is clearly evinced by the circumstances and history of the matter, developed by the evidence in the case. But it is said, that by reason of the neglect to comply with the requirements of the 2d section of the charter, the orators, in order to save their existence have been obliged to accept an amendment of their charter in this respect, which when complied with, will put the Vermont Central Company in a position of disadvantage under the lease, as compared with that which they would have held, if the orators had complied with the requirements of the original charter; in fact, that it has become impossible for the orators to fulfil their undertaking in the instruments of lease. The Vermont Central Company under the instruments of lease, are not to be called upon to make payment for any other portion of the orators' road till the same shall have been constructed and proffered for acceptance. When it shall have been built and offered for acceptance, and rent claimed therefor, the question may then properly be raised as to the obligation of the Vermont Central Company to accept the same, and pay rent therefor, depending upon the duties and liabilities with which the possession and use of it may be incumbered by virtue of additional legislation in that behalf on account of the failure of the orators to comply with the requirements of the original charter. The immediate duty to the public under the charter and subsequent legislation in respect thereto, rests upon the orators. The Vermont Central Company has assumed to perform so much of that duty, as in such manner and upon such terms and conditions as are specified and stipulated in the instruments of lease. Their duty in that respect is owing to the Vermont and Canada Company. It is matter of contract between them. The provisions for remaining duties to be performed by the Vermont and Canada Company towards the public are contained in the act of 1859. It would seem to be reasonable to determine that when the case shall have arisen involving the question with a feeling of reasonable assurance in the meantime, that the law will afford ample protection to all interests involved. In the present posture of the case, we are unable to say that there has been such a failure on the part of the orators to perform the undertakings on their part in the instruments of lease, or that by means of a failure on their part to perform the requirements of the charter, and the amendments thereto, they are now in such a position of inability to perform said undertakings as to preclude them from the right to enforce the payment of the rent which shall have accrued prior to the happening of those events, which, it is claimed should thus operate against them.

In this view it is impossible for us to see how there has as yet been a failure of the consideration upon which the Vermont Central Company undertook and covenanted to pay the rent stipulated, and made provision for securing the payment thereof.

The most that the case furnishes ground for saying is, that there is some reason to fear that in some respects, the orators may fail to make good their undertakings which, in part, constituted the consideration upon which the Vermont Central Company agreed to pay the stipulated rent and made the security therefor.

In the absence of any evidence of bad faith or wilful default on the part of the orators towards the lessees and their assigns, in the course taken by them in reference to the unperformed requirements of the second section of the charter, either original or as amended, and in view of the fact shown by the evidence, that both the Vermont Central Company, and the trustees under the first mortgage have approbated the course thus taken, and by the fact that none of the bondholders have manifested any disapprobation till since the act of November 18, 1858, and in the absence of any prejudice that has, as yet, occurred to any interest of, or derived through the lessees by the course thus taken, and in the want of any sufficient ground for determining that any prejudice is destined hereafter to accrue therefrom, the inequity of holding the orators disentitled to enforce their security for the rent becomes very palpable, and particularly so when it is considered that the lessees and their assigns have had the full use and benefit of the orators' road, located and constructed to the approbation and acceptance of the lessees, with the money and means furnished by the orators, in substance agreeably to the stipulation in the instruments of lease.

Under the view in which the Court do concur, in relation to that instrument the case stands upon the ground of a pledge and lien by way of security, and as a means of obtaining payment of the rents in arrear upon the earnings and income of the two roads, with the right to have them applied for that purpose, in priority to the other creditors of the Vermont Central Company who became such, and took their security in subjection to such pledge and lien of the orators. This being a pledge and lien by way of security, which, it is not denied, the Vermont Central Company was competent to give, and the orators to take the principles and rules governing the enforcement of it, are less specific and rigid than those governing the class of cases which, in equity law, fall under the head of *bills for specific performance*.

In pursuance of the views thus presented, we hold the indenture of August 24, 1849, to be a valid instrument between the parties, and that of July 9, 1850, to be valid as constituting a pledge and lien by way of security, for the payment of the stipulated rent upon the tolls, fares and incomes of the two roads in priority to the trustees and bondholders, and that the same is enforceable for the rents in arrear of the road as already constructed and used.

Upon the whole case, we hold that the sum on which as cost of construction, the eight per cent. is to be computed as the measure of the rent to which the orators are entitled, is one million three hundred and forty-eight thousand five hundred dollars, and that for that rent alone was security provided in and by the indenture of July 9th,

1850, and only in respect to that are the orators entitled to a decree. In the present posture of the case, the Court being unable to decide that the orators are entitled to the possession of the roads, property, etc., it seems obvious, in view of the character of the property and of the various interests involved, that the only proper or practicable course is to have the roads and property remain in the hands of receivers under the control of the Court of Chancery.

The decree of the Court of Chancery is reversed, and the case is remanded to that Court, to be there proceeded with conformably to a mandate, which will be drawn in detail according to these views and points of decision, and sent to that Court.

78 CEDAR ST., NEW YORK.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO., NEW YORK, Aug. 16, 1864

AT A MEETING OF THE BOARD OF DIRECTORS of the Illinois Central Railroad Company held this day, the following resolutions were adopted:

Whereas, In the mortgage given by this company to the trustees to secure their construction bonds, it was agreed that the moneys received upon sales of the lands mortgaged, as fast as received, be applied to the cancellation of said bonds, and it has become necessary for this purpose to take up a portion of the bonds in pursuance of a provision contained in each bond, the company may "pay the same at any time to be named by them by adding to the principal a sum equal to twenty per cent. thereof."

Resolved, That the Company will, on the first day of October next, pay the seven per cent bonds for one thousand dollars each, numbered from one to three thousand, (1 to 3 000,) with twenty (20) per cent. added to the principal thereof, upon surrender at its office in the City of New York; and that it doth hereby name the first day of October, 1864, as the time when the principal of said bonds shall be paid, after which day interest upon them will cease.

Resolved, That the holders of the scrip stock of this Company be required to pay the unpaid ten per cent. upon the stock held by them respectively, on or before the twenty-sixth day of September next, at the office of the company in the City of New York; and that upon all sums unpaid, interest will be charged from that day; and that after the twenty-sixth day of September next, no transfer shall be made of stock which shall not be paid in full. THOMAS E. WALKER, Treasurer.

U. S. 7-30 LOAN.

The Secretary of the Treasury gives notice that subscriptions will be received for Coupon Treasury Notes payable three years from Aug. 15th, 1864, with semi-annual interest at the rate of seven and three-tenths per cent per annum,—principal and interest both to be paid in lawful money.

These notes will be convertible at the option of the holder at maturity, into six per cent gold bearing bonds, payable not less than five nor more than twenty years from their date, as the Government may elect. They will be issued in denominations of $50, $100, $500, $1,000 and $5,000, and all subscriptions must be for fifty dollars or some multiple of fifty dollars.

The notes will be transmitted to the owners free of transportation charges as soon after the receipt of the original Certificates of Deposit as they can be prepared.

As the notes draw interest from August 15, persons making deposits subsequent to that date must pay the interest accrued from date of note to date of deposit.

Parties depositing twenty-five thousand dollars and upwards for these notes at any one time will be allowed a commission of one-quarter of one per cent, which will be paid by the Treasury Department upon the receipt of a bill for the amount, certified to by the officer with whom the deposit was made. No deductions for commissions must be made from the deposits.

SPECIAL ADVANTAGES OF THIS LOAN.

IT IS A NATIONAL SAVINGS BANK, offering a higher rate of interest than any other, and THE BEST SECURITY. Any savings bank which pays its depositors in U. S. Notes, considers that it is paying in the best circulating medium of the country, and it CANNOT pay in anything better, for its own assets are either in government securities or in notes or bonds payable in government paper.

It is equally convenient as a temporary or permanent investment. The notes can always be sold for within a fraction of their face and accumulated interest, and are the best security with banks as collaterals for discounts.

Convertible into a Six per cent. 5-20 Gold Bond.

In addition to the very liberal interest on the notes for three years, this privilege of conversion is now worth about three per cent per annum, for the current rate for 5-20 Bonds is not less than NINE PER CENT PREMIUM, and before the war the premium on six per cent U. S. stocks was over twenty per cent. It will be seen that the actual profit on this loan, at the present market rate, is not less than ten per cent per annum.

Its Exemption from State or Municipal Taxation.

But aside from all the advantages we have enumerated a special Act of Congress EXEMPTS ALL BONDS AND TREASURY NOTES FROM LOCAL TAXATION. On the average, this exemption is worth about two per cent per annum, according to the rate of taxation in various parts of the country.

It is believed that no securities offer so great inducements to lenders as those issued by the government. In all other forms of indebtedness, the faith or ability of private parties, or stock companies, or separate communities, only, is pledged for payment, while the whole property of the country is held to secure the discharge of all the obligations of the United States.

While the government offers the most liberal terms for its loans, it believes that the very strongest appeal will be to the loyalty and patriotism of the people.

Duplicate certificates will be issued for all deposits. The party depositing must endorse upon the ORIGINAL certificate the denomination of notes required, and whether they are to be issued in blank or payable to order. When so endorsed it must be left with the officer receiving the deposit, to be forwarded to the Treasury Department.

SUBSCRIPTIONS WILL BE RECEIVED by the Treasurer of the United States, at Washington, the several Assistant Treasurers and designated Depositaries, and by all National Banks which are depositaries of public money,

AND ALL RESPECTABLE BANKS AND BANKERS throughout the country will doubtless AFFORD FACILITIES TO SUBSCRIBERS.

CAST STEEL.

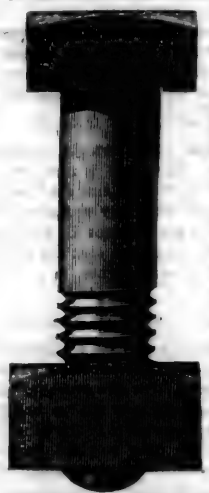
MANUFACTURED BY

NAYLOR, VICKERS & CO., SHEFFIELD, ENGLAND.

CAST STEEL TYRES WITHOUT WELD,

Reversible Crossings and Frogs, Disc Wheels, Pistons and Piston Rods without weld, Crank and Straight

AXLES, AND EVERY DESCRIPTION OF STEEL FOR RAILWAY PURPOSES.



STEEL CROSSINGS have been in use more than three years with very little perceptible wear, in places where the ordinary ones had to be replaced every four months. They have been estimated to be good for ten years in the worst places.

THE "VICKERS" TYRES are in constant and extensive use on almost all the Railways in Great Britain, and also on many roads in other parts of Europe. Their chief advantages are:—1. Their Durability: they will outlast any Iron Tyre without being turned, and for this reason are cheaper than Iron Tyres (free of cost). 2. Their Safety: being without a weld they are not liable to break, and Steel is proved to be a stronger and tougher metal than any other. 3. Their Uniformity: they do not wear in flat places nor "laminate." 4. They are not injuriously affected by frost, and are guarantied to stand the severest climate.

STEEL AXLES will be found economical, because they may with safety be made much lighter than those of Iron. They will wear longer and "smoother," and will consume much less oil; nor are they liable to granulate from constant use.

For CIRCULARS, GIVING FULL PARTICULARS AND TESTIMONIALS, PRICES, etc., apply to **NAYLOR & CO.,**

BOONTON IRON WORKS.

PATENT MACHINE FORGED

BOLTS AND NUTS.

WE are now manufacturing these goods at our Works at BOONTON, N. J.—In the manufacture of the Nuts, the patented device of the **"Double Punch,"** viz, two punches operating from opposite sides **towards the centre of the Nut, forces into the body of the Nut most of the Iron** which in all other processes is punched out, and also **condenses the Iron around the Bolt hole, thus ensuring the greatest strength in the Screw Thread,** and making a Nut **SUPERIOR TO ANY** made by hand or the ordinary machine processes. In size they are made according to the standard approved and adopted by our best Machinists and Engine Builders. The mode of making Bolts is such as to produce an **upset solid head, perfectly true on all sides, and of uniform size.** The Iron used is of **our own manufacture,** and we guaranty it of superior quality.

We invite consumers to make trial of them, and will furnish **SAMPLES** and **PRICE LIST** on application.

FULLER, LORD & CO.,

137 & 139 GREENWICH ST.,

NEW YORK.

Solid Emery Vulcanite.

WE are now manufacturing wheels of this remarkable substance for cutting, grinding and polishing metals, that will outwear hundreds of the kind commonly used, and will do a much greater amount of work in the same time, and more efficiently. All interested can see them in operation at our warehouses, or circulars describing them will be furnished by mail.

NEW YORK BELTING AND PACKING Co.,
Nos. 37 and 38 Park Row, New York.

MACHINE BELTING,

STEAM PACKING, ENGINE HOSE.

THE superiority of these articles, manufactured of vulcanized rubber, is established. Every belt will be warranted superior to leather, at one-third less price. The Steam Packing is made in every variety, and warranted to stand 300 degs. of heat. The Hose never needs oiling, and is warranted to stand any required pressure; together with all varieties of rubber adapted to mechanical purposes. Directions, prices, etc., can be obtained by mail or otherwise at our warehouse.

NEW YORK BELTING AND PACKING CO.,
JOHN H. CHEEVER, Treasurer,
Nos. 37 and 38 Park Row, New York.

NEW 7 3-10 LOAN AND TEN-FORTY BONDS.

TENTH NATIONAL BANK,

No. 240 Broadway,

Will receive subscriptions for the New 7 3-10 Treasury Notes, which will be dated Aug. 15, with semi-annual coupons, and issued in sums of $50, $100, $500, $1,000 and $5,000. Parties subscribing will be allowed interest to Aug. 15, and the commission allowed by Government of $2 50 on each $1,000. The Ten-Forty 5 per cent. Bonds date from March 1, and 50 per cent. premium for gold interest. Payments must be made in Legal-Tenders or National Bank Notes.

New York, Saturday, September 3, 1864.

The Adirondack Company's Railroad.

The Adirondack Company is a corporation existing under the laws of the State of New York, and having for its object the development of the immense wilderness drained by the Upper Hudson and Western St. Lawrence Rivers. This region is embraced in the tri-angle lying between the latter river, the Mohawk and Lake Champlain; and is chiefly known to the public as a romantic waste composed of mountains and lakes; the delight of sportsmen eager to escape from the purlieus of civilization, and permanently inhabited only by the wild animals whose occupancy has survived that of their aboriginal enemies.

This popular idea is far from correct. It is true the Adirondack region abounds in the most striking and beautiful features of romantic scenery, and that its woods are still alive with game, and its incomparable lakes with fish; but so far from possessing resources of solid and durable wealth, mountains and forests offer to the hand of enterprise almost unlimited supplies of those materials most needed in prosecuting the industrial arts of the age. Timber for all purposes, a casual acquaintance shows to exist in profusion; but only a few are aware that the forests are of infinitely less importance than the mines. Iron, of different varieties, and the very best quality, is found there in quantities practically inexhaustible; and it only needs the means for cheap transportation to make them of incalculable value to the owners, and of the greatest utility to the industry of our seaboard states.

This means of transportation is now likely to be secured through the Adirondack Company's Railroad. This corporation, chartered with a view to the improvement of the great wilderness, and highly favored by state legislation as an encouragement in the enterprise contemplated, owns immense tracks of these wild lands, including the choicest of the discovered mines. To make these practically valuable, a railroad is needed to connect them with tide-water; and, as if to facilitate this connection, Nature has provided an admirable route in the valley of the Upper Hudson. So uniform and gentle, in fact, will be the grade from the summit to the valley of the Mohawk, that a train of loaded cars will descend with the least possible expenditure of locomotive force. Only on the southern end of the road, where it leaves the Hudson and takes a shorter line towards New York by way of Saratoga, do the grades depart from this uniformity; and this is precisely the portion to be first built, and the labor on which is well under way with a view to the completion of the first twenty-five miles the present season. About fifteen hundred men are now employed in the work of construction; and before New Years, the wild denizens of the Adirondacks will be startled by the new echoes awakened among its fastnesses by the shrill voice of the invading locomotive.

But it is not alone as an adjunct to the mining and lumbering operations of the Adirondack Company, that their railroad possesses an importance to New York and the Atlantic seaboard. Pushed forward to the St. Lawrence, it becomes at once a great avenue for trade and travel between Canada and our eastern cities. The Raquette Valley offers for it as feasible a route to the St. Lawrence, as does the Upper Hudson from the northern boundary of the wilderness; and while two or three branches on the northern portion, will gather in and concentrate the trade and travel of all this part of Canada, the main road will be nearly in an air-line between Albany and Ogdensburg. And if the Northern Pacific Railroad, recently chartered by Congress, should ever be built, a large part of its business, following the Grand Trunk Railroad of Canada between Port Sarnia and Prescott, will be likely to flow over the Adirondack Road between Prescott and Saratoga, and from the latter point be divided between New York and Boston; thus making this road in fact, a link of the great northern line of Pacific Railroad between the Atlantic coast and Puget Sound.

In closing this brief notice of an enterprise the importance of which is as yet but dimly comprehended by the public, it would be unjust to omit the credit due for its success. To THOS. C. DURANT, Esq., whose high official relations with the Union Pacific, the Rock Island and the Mississippi and Missouri Railroads, are well known to railroad men, is mainly to be attributed the successful progress of the railroad of the Adirondack Company. It is not often that any one man possesses sagacity and administrative ability, at the same time to utilize and prosecute enterprises so numerous, so large and so diverse; and when an instance does occur it is but just that the credit should be accorded. As time shall demonstrate the commanding influence of this last of his works, the point of our commendation will become more plainly apparent.

Plumbago on Lake Superior.

According to the Detroit *Advertiser*, another extraordinary mineral discovery has been made on Lake Superior, being no less than a rich mine of plumbago (Graphite.) It was found on the tract of the Marquette Silver Mining Company, and it is said that Prof. Cassels of Cleveland, who has made an assay, pronounces it the best plumbago he ever saw, and says if it is plentiful, the mine is worth more than any gold mine in the country. Capt. Sweet, who is familiar with the ground, says the mine is very rich. The only mine of pure plumbago fit for the best quality of pencils is at Cumberland, England, the working of which is conducted with extraordinary secrecy. There are several mines of very inferior graphite found in this country, the product of which is used in the manufacture of crucibles and for other uses

in manufactures. None of it is fit for pencils. The Silver Lead region of Lake Superior must be a wonderful place if all the "discoveries" located on it amount to anything. Lead, silver, gold and plumbago appear to put the discoverers in doubt as to which they shall mine for first. Iron is close by and copper not far off. All that is needed now to complete the discoveries is tin.

Fare on City Railroad Cars.

The Buffalo city railroad companies having applied to the Common Council for permission to increase their rates of fare, the case was laid before Judge Morton, who decided that the Common Council has not the power to alter the terms of the original contract, in accordance with which the franchise was granted. Even if the city should consent to an increase of fare, any passenger would have the right to demand transportation at the price originally fixed. A railroad grant is a contract to do a certain work for a certain price, and the original rate of fare is that price fixed by that contract.

Chicago, Burlington and Quincy Railroad.

We have been favored with a copy of the report of this company for the year ending April 30, 1864, from which we learn that the earnings on 138 miles of road, and seventy-three per cent. of earnings on 30 miles of the Galena and Chicago Union Railroad used, and of the road from Peoria to Burlington, 95 miles, were:

From freight	$2,326,363 58
" passengers	684,374 82
" mails and miscellaneous	79,472 63
	$3,090,211 03

The operating expenses were:

Transfer to sinking fund	109,437 50	
		1,093,582 30
Balance May 1, 1864		$1,026,093 11

The road now owned by this company, including the Quincy and Chicago road recently purchased, consists of the line from Chicago through Galesburg to Burlington (of which the new line, now being finished from Chicago to Aurora, forms a part) 204 miles, from Galesburg to Quincy 100 miles, from Galesburg to Peoria 53 miles, from Yates City to Lewiston 30 miles, and that part of the old road from the Galena Junction to Aurora 13 miles, making a total of 400 miles of road.

The expenditures made for construction and in the purchase of this 400 miles of road, including depot grounds and buildings in Chicago, but exclusive of the cost and value of equipment, has been		$11,702,470 22
For equipment		2,178,055 00
For Union Track in Chicago		46,800 01
Total cost of road, equipment and appurtenances		$13,927,325 23

The capital stock of the company, on the 30th of April, was $6,571,140.

The funded debt, exclusive of the bonds canceled by the sinking fund, was as follows:

Chicago and Aurora and Central Military Tract bonds		$229,000 00
C., B. & Q. trust mortgage sinking fund bonds exchanged for C. & A. and C. M. T. bonds		2,283,000 00
Issued and sold of the same class of bonds	$1,792,000 00	
Less bonds purchased and canceled by sinking fund	542,000 00	
		1,350,000 00
C., B. & Q. plain 7 per cent. bonds, issued on account of purchase of road from Peoria to Burlington		781,000 00
C., B. & Q. second mortgage bonds 4 and 4½ per cent. issued in exchange for bonds of Quincy and Chicago Railroad Company		940,500 00
C., B. & Q. scrip certificates, issued for the same purpose as above, not bearing interest	$697,000 00	
Less scrip redeemed	152,468 75	
		544,531 25
Total bonds and scrip		$6,128,031 25
Capital stock		6,571,140 00
Total stock, bonds and scrip		$12,699,171 25

Excess of cost of road, equipment and appurtenances over stock and bonded debt, $1,228,153 98.

The other assets and liabilities of the company, on the 30th day of April, were:

ASSETS.

Value of material on hand for the future use of the operating department	$531,756 56
Accounts, bills receivable, due from agents and connecting roads	251,758 56
Cash in N. Y., Boston and Treasury	126,998 37
Total	$910,513 49

LIABILITIES.

Amount unclaimed divid'ds	$1,228 00	
Accounts and pay rolls	178,014 67	
Bills payable	194,356 24	
Due agents and connecting roads	192,519 32	
Total		$566,118 23
Balance of assets		$344,400 26
Add excess of cost of road, &c., over stock and bonded debt		1,228,153 98
Total		$1,572,554 24
Less payments for sinking fund		546,461 13
		$1,026,093 11

The capital stock of the company has been increased the past year by the sale of 8,325 shares of stock to stockholders at par, as per circular of October 20, 1863, amounting to $832,500 00

The bonded debt has been increased to the amount of 25,437 50

Total increase of stock and bonded debt $857,937 50

The expenditures during the same time for construction and equipment, including payments on account of purchase of road, have been as follows:

New road from Chicago to Aurora	$644,989 72
Depot grounds in Chicago	42,476 67
Depot buildings and fixtures	68,402 37
South Branch Dock Company's lands and track	25,734 71
Land for cattle yards, Chicago	11,245 00
Sundry other buildings at Chicago and on the line	11,398 22
Raising track and bridging on the Mississippi Bottoms	62,989 72
Bridges and culverts from Peoria to Burlington	27,361 77
Fencing from Peoria to Burlington	15,932 18
Depot grounds at Peoria	11,703 09
Union Track Chicago	6,788 63
Telegraph line	17,602 60
Locomotive engines	172,344 12
Passenger cars	14,957 04
Freight cars	226,124 87
On account of purchase of road from Peoria to Burlington	148,750 79
On account of purchase of Quincy and Chicago road	45,201 04
Total expenditure	$1,554,002 45
Balance paid out of income account	$696,064 95

The gross earnings of the road, the past year, show an increase of about twenty per cent., notwithstanding the failure of the corn crop, one of our largest staples and sources of business.

This increase has been produced from the growth of the general traffic of the road and line, and not from Government patronage, and is exclusive of earnings on the Quincy and Chicago road, and on business to, from and on the Lewiston Branch. The operating expenses have been fifty-two per cent. of earnings, being an increase of about six per cent. over the former year. This increase is accounted for in the large expenditures in repairs of the road, recently purchased from Peoria to Burlington, and in the fact that it has been found impracticable to advance the rates of transportation with the rapid advance in labor and supplies.

The new line of road from Chicago and Aurora (the point where it connected with the old line) will be in good order for business by the 20th instant, when our trains will be withdrawn from the Galena road, in accordance with the two year's notice given that company, and commence running over it, after which the earnings, heretofore paid the Galena Company for use of its track, will enure to this company.

It was intended that this new line should be fully completed, except the ten miles of double track, before commencing business upon it.

The work, however, has been unexpectedly delayed by the great demand and scarcity of labor, and on account of the sinking of about forty rods of the road bed, where the line crosses a tract of low marshy land, about fifteen miles from Chicago, causing an addition of some fifty thousand cubic yards of earthwork at that point.

The double track will be laid in time for use in our fall business.

The estimated cost of this work, as previously reported, based upon the contracts made, and prices then prevailing, was eight hundred and fifty thousand dollars. The subsequent large increase in the cost of labor and material made it necessary to advance largely the prices of work under contract at that time.

These advances with the increased cost of other labor and materials, including the additional earthwork, before mentioned, will increase the previous estimated cost about eighteen per cent., or $150,000. There has been expended on this work, to the 1st of May, $755,098 56, leaving to be expended, to complete the work, including the double track, $245,000.

A new engine house has been erected at Chicago, of stone and brick, with iron roof, and turntable, and heating, lighting and water arrangements complete, of a size sufficient for holding twelve engines.

An additional freight house has also been erect-

ed a little west of the one built last year, 513 feet long and 60 feet wide, and is substantially built of stone and brick, and covered with slate roofing.

A telegraph line has been built on the new line of road, and from Galesburg to Peoria, and on the Lewiston Brach, and an additional wire attached to the old line for the exclusive use of this company.

The rolling stock has been increased by the addition of 12 locomotive engines, 7 baggage, express and mail cars, 295 freight cars, 4 conductors' and drovers' cars, and 6 large passenger cars are in course of completion. The equipment of the line now consists of 98 locomotive engines, 36 passenger cars, 24 baggage, express and mail cars, 1,334 box, freight and cattle cars, 401 platform and coal cars, and 40 conductors' and drovers' cars.

The depot grounds in Chicago have been enlarged the past year by the purchase of the south part of blocks 26, 27, 28, 29 and 30, which adjoins and connects the lands previously purchased.

This company now own all the land lying between the Galena South Branch Track and Sixteenth (formerly called North) street, extending from the Chicago River westward to Reuben St.

They have recently purchased, just within the city limits, adjoining the new line of their road, about forty acres of land for the purpose of erecting stock yards thereon.

The large expense and delay attending the delivery of stock, as heretofore done, to the various stock yards in the city, and especially that designed for the Chicago market, has rendered the providing of these yards indispensable to the proper and economical transaction of this branch of our business. Only a small portion of this expense has yet been incurred. The whole cost of lands and improvements is estimated at $80,000.

This company has also made a contract with the South Branch Dock Company, to construct and operate a track connecting that company's slips and canals with the track and depot of this company, and have received in compensation for constructing the track, eight hundred feet of land, fronting on Joy's Canal, with lots extending back about three hundred feet, to which they have added two hundred feet more by purchase, making a thousand feet of wharfing, fronting on said canals, with about 7¼ acres of land.

The completion of this track will concentrate on their grounds, and those of the Dock Company, a large portion of the lumber business transacted in Chicago in connection with our line of road, and will avoid the large expense and delay attending the delivery and receiving of cars to and from the various lumber yards in this city, as heretofore practiced.

The cost of track and completion of canal and dock, including cost of land purchased, will be about $50,000. It will be seen that a little over one-half of this expenditure has been made.

The large and extensive grounds now owned in Chicago, covering an area of about seventy-five acres, and having a river and slip front of 3,200 feet, it is believed will meet the requirements of the freighting business of the road for many years, and in view of present wants and the constant and increasing value and cost of property in Chicago, the expenditure, though large, will be found to have been highly advantageous to the company.

The agreement, heretofore made, for the use of the Union passenger depot, at Chicago, has been extended for three years from the 1st of July next.

It was expected, at the time the road from Peoria to Burlington was purchased, that an expenditure of some two hundred and fifty thousand dollars would soon be required in raising the grade and tracks over the Mississippi Bottoms, in fencing the road and providing depot grounds at Peoria, station buildings at Peoria, Burlington, and on the line, and in rebuilding temporary bridges and works necessary to a proper and economical use of the property.

The report of the engineer shows that considerable progress has been made the past year in making these improvements, $117,987 67 having been expended for that purpose.

This company being the owner of a large majority of the bonds issued for the construction of the road from Galesburg to Quincy, (as will appear from this and former reports,) in order to realize their money, commenced proceedings some time since for the foreclosure of the mortgages and sale of the property.

These proceedings have so far progressed that the road has been sold and bid off by the company. The agreement recently made for the remaining bonds in the hands of other parties, it is probable will render further proceeding, for perfecting the title to the property, unnecessary.

The contract and agreement made by this company for the completion of the thirty miles of road from Yates City to Lewiston, was so far carried out that the road was put in operation in June, 1862. Since that time the net earnings from the business of that road, together with the per centage allowed on the business it furnished the road of this company, has provided the means for the redemption of the bonds issued for its construction.

These bonds, and the interest thereon, having been taken up, in accordance with that agreement, the road and property now belongs to this company.

In reviewing the statements made in this report it will be observed that the expenditures for construction and equipment upon the whole line, during the fiscal year, amount to. $1,554,002 45

While the increase in the capital account has been:

For the issue of new st'k.	$832,500 00	
For the sale of bonds...	25,437 50	
		857,937 50
Balance paid out of income account.		$696,064 95
Amount previously paid for similar purposes out of income account, exclusive of sinking fund.....		330,528 16
Total payments on construction out of income account		$1,026,593 11

The estimated expenditures required for the ensuing year are as follows:

For completion of new road to Aurora and second track to Lyons.....	$245,800 00
For completion of cattle yards and improvements.....	68,755 00
For completion of South Branch Dock Company's land and track.....	24,265 00
For completion of improvements on road from Peoria to Burlington....	132,013 00
For completion of payments for Northern Cross road and bonds	270,000 00
For refunding to income acc'nt money for dividend of May 25th, 1864....	262,844 00
Total	$1,002,877 00

To provide for the expenditures named, the Directors, on the 29th of April, 1864, *Voted*, to issue and sell to the stockholders, in proportion to the stock held by each of them at the close of business on the 6th day of May, 1864, one new share, without the May dividend, for each six old shares held, at one hundred dollars per share, payable on or before the 25th of May, 1864. For further particulars, reference is made to the circular sent to stockholders, dated April 29th, 1864.

The extension of the Burlington and Missouri River Railroad is of much importance to this company. Other lines of road are being extended through that State, which will divert much of the business now received from that road, unless that line shall be extended at an early day. Application has been made for aid in prosecuting this enterprise.

The Directors have no doubt that the interests of this company will be largely promoted by rendering such proper assistance as will enable that company to go forward with the work.

They are unwilling, however, to assume the responsibility of such action, without first having the direction or assent of the stockholders.

It is believed that the requisite aid may be provided with but slight inconvenience to this company, by applying for a time the estimated net earnings from the business derived from that road, in the purchase or redemption of a part of the securities that may be issued or set apart, to provide means for such extension.

The results produced from a like arrangement made by this company for the completion of the Lewiston Branch Railroad, will show in part the benefits that would accrue from a similar arrangement with that company.

This company, however, are more largely interested in the extension and completion of the Burlington and Missouri River road, as it will, when completed, command the trade of a large part of the State of Iowa, as well as a large territory lying west of the Missouri River.

The number of miles run by locomotives on the Chicago, Burlington and Quincy, and Quincy and Chicago Railroads was as follows:

	Chicago, Burlington Quincy.	Quincy and Chicago.
On passenger trains....	398,398	123,725
On freight "	834,510	147,635
On miscellaneous trains	382,859	68,392
Total	1,615,767	339,752

Total miles run, 1,955,519. Miles run by wood-burners, 728,216; by coal burners, 1,227,303. Cords of wood consumed, 18,484; tons of coal, 35,842. Average cost per mile for fuel for wood-burners on passenger trains, 8.60; on freight trains, 17.00. Do., coal-burners on passenger trains, 8.14; on freight trains, 16.56. Miles run to cord of wood, 56.04; to ton of coal, 84.04. Cost per mile for repairs, 11.19; for oil, tallow and waste, 1.27; for fuel, 11.11—total cost per mile run 23.57.

The number of passengers carried between Chicago, Burlington and Quincy, and Quincy, Burlington and Peoria, Yates City and Lewiston, (393 miles) for the year was 573,925; of these, 38,722 were through, and 535,203 way. Of the through passengers, 15,989 were carried east, and 22,733 west. Of the way passengers, 262,055 were carried east, and 273,148 west. Total carried east, 278,044; do., west., 295,881. Total mileage of passengers, 30,609,865—an increase over the previous year of 7,250,926.

The whole tonnage moved over the C., B. & Q. R. R., 264 miles, in 1863 was 709,970; in 1864, 739,815—an excess of 29,845. The whole tonnage over the Q. & C. R. R., 100 miles, in 1863 was 228,157; in 1864, 265,474—an excess of 37,317. The total number of tons moved over the whole line in 1863 was 777,736; in 1864, 809,674—an excess of 31,938. Total tonnage east in 1864, 523,594; do., west, 286,080. Total number of tons moved one mile over the whole line in 1864, 116,753,508—an increase over 1863 of 8,575,666.

The Chicago, Burlington and Quincy Railroad Line is composed of the following roads:

Galena and Chicago Union between Chicago and Junction.....	30 miles.
Chicago, Burlington and Quincy, Junction and Galesburg, and Peoria and Burlington.....	234 "
Lewiston Branch, between Lewiston and Yates City.....	30 "
Quincy and Chicago, between Galesburg and Quincy.....	100 "
Total	394 miles.

The earnings of the line for the fiscal years ending April 30, have been—

	1863.	1864.
Freight	$2,542,827 16	$2,979,016 21
Passengers	647,097 44	956,474 89

The directors chosen at the annual meeting, June 19, 1864, are as follows:

President.—JOHN VAN NORTWICK.

Directors.—John Van Nortwick, Chauncey S. Colton, James F. Joy, Erastus Corning, John M. Forbes, John W. Brooks, Henry P. Kidder, Sidney Bartlett, Robert S. Watson, William Boott, Edward L. Baker.

Chairman of Board.—EDWARD L. BAKER.

Superintendent.—CHARLES G. HAMMOND.

Treasurer and Secretary.—AMOS T. HALL.

Euphrates Valley Route to India.

The following extracts are from the letter addressed by Captain W. B. Selby to Mr. W. P. Andrew, chairman of the Scinde and Euphrates Valley Railway, on this important and growingly-interesting subject:—

Believing that the time has arrived when this important undertaking must be commenced; and recognizing in its fullest extent the energy with which your attention has for so long been directed to this great subject, I address you in the hope that others besides yourself may recognize that in an improved system of communication with India lies one of its chiefest means of safety, in the event of serious European complications, which, though delayed for the present, may perhaps soon occur. In addressing you on this subject, it is not my purpose to send you a statement of facts and figures—the cost per mile, and the returns that doubtless would be made—these have already been well ventilated by yourself in your "Euphrates Valley Route to India," and by those who practically feel the want, and acknowledge the necessity of a safer and better route than we now have, information such as I allude to may there be fully obtained.

Having for many years been in and about Mesopotamia, I would confine myself to a consideration of the superiority which a railway through it would have over the voyage by the Red Sea—the facilities which naturally would attend its construction—the increased power it would give us in the East—and the benefit to those most important provinces of Turkey, to strengthen which, is still the cherished policy of the foreign office.

Holding, as I do, that Bombay, from its many natural facilities, must eventually become the chief port of our Indian possessions, as it is already the only safe harbor we have, save the rising one at Kurrachee; in writing on the subject of the best route between England and India I accept that as the point of departure, and now proceed to show the great advantages, so far as the sea voyage is concerned, the Persian Gulf possesses over the Red Sea route. In round numbers the distance from Bombay to Suez is 3,000 miles, while that from Bombay to Basreh (or Busorah commonly called) is 1,600. In the former route, during the months of June, July and August, the southwest monsoon blows so strong, that the direct passage, as it is called, is never attempted by the mail steamers, but a circuitous and consequently longer passage is made by going to about 10 degrees north; involving, of course, great loss of time, and very much increased expenditure of coal, with great wear and tear of engines and hull. On the other hand, the course from Bombay to the entrance of the Persian Gulf being about west northwest, steamers leaving Bombay for that place in the southwest monsoon, are almost always able to carry fore and aft sails, the ordinary direction of the monsoon being west southwest, and in from three to four days fetch in behind Ras al Had, from whence to Basreh it is always comparatively smooth. Again, should the Indian Ocean swarm with small destructive screw-rams or privateers, a perfectly safe course for our unarmed vessels might always be found by skirting the Mekran coast, all along which is excellent anchorage, having many roadsteads which could be made available for our protecting squadron.

From the parallel of Ras al Had to Basreh, during the monsoon months, a heat, almost as great as that of the Red Sea, would be felt, till arrival at Basreh; but as I imagine the grand terminus would be at Zobier, four miles from Basreh, which being on higher ground and on gravelly soil, is free from the damp heat and foul miasma which has almost destroyed Basreh, a branch train would, on the arrival of the steamer from India, at once leave for Zobier; and though the heat is great health would not be endangered. Assuming, then, that of the two sea routes that by the Persian Gulf is the more eligible, for the reasons I have stated, the question next to be considered is to which of the routes from thence to the Mediterranean preference should be given for a railway? There are two—one, by keeping along the higher land west of the Euphrates, and so avoiding the marshes altogether; and the other by crossing the Euphrates a little above Korna and proceeding in almost a direct line through Mesopotamia to Baghdad, which I imagine would be a principal station on the line.

The former line would be somewhat more circuitous, and would pass along the edge of the great desert, and at once the stereotyped objection would be made of its exposure to the constant attacks of the Bedouin Arab.

However great and valid an objection this might have been twenty years ago, I hold that it has no force now. Twenty years have in a most marked manner changed the relations between the English and the dweller in tents. Then we were comparatively unknown to the wild tribes who inhabit the tracts of Turkish Arabia; but the rolling stream of time, bringing increased communication, has not in its effects been unfelt here. Is it too much to say that steam has mainly effected this? Twenty years ago, and the only communication between India and Basreh was tardily carried on by the Bugala making one trip a year. Twenty years ago, and the Arab of the desert knew of India and the English but such tales as travelers told them, or they learned from some chance wayfarer passing hurriedly on. Now Basreh is twice a month visited by steamers from Bombay—the Euphrates and Tigris navigated by steam vessels—keeping up constant communication between India and Baghdad; and taking advantage of the facility of the passage now offered, Arab merchants from Nejd, Jewish traders from Baghdad—aye, even itinerant dealers from smaller towns, make the trip to Bombay and back, bringing India and the provinces of the pachalic of Baghdad into closer and more intimate connection. On their return, they tell of the wonders they have seen, the wealth of India, the industry of the people, and the justice and even-handed dealing of the Government; and their one great desire is to qualify themselves to obtain the protection of the English Government, to obtain that fair dealing from the Turkish authorities that never can be obtained, save by bribing each official through whose hands their business passes.

Recent accounts from Baghdad tell of the opposition offered by one of the tribes to the parties completing the telegraphic line between that place and Basreh; and the *Times* correspondent most truly gave as the reason, that it was so because it was a Turkish work. Prior to the completion of the line from Constantinople to Baghdad, some of the Sheikhs of the tribes, through whose districts it was at one time in contemplation to carry the line, had an interview with our Consul at Diarbekir, than whom no European has a better knowledge of Arab character and habits; than whom no European is more esteemed and beloved by these children of the desert. He plainly put the question to them: "If the line were carried through your country, what would you do?" and was curtly answered, "If the work of the Turkish Government, we should oppose it:" believing it to be the precursor of some new attempt at oppression; but if done by the English, "it would be unharmed," and so would the railway be. If the work of Englishmen; if the workmen—and thousands would come—were fairly treated and honestly paid; if the Sheikhs, through whose district the line passed, were treated with common courtesy, receiving at times a dress, or a few dates and cloth, and such little assistance given to the Arabs, costing nothing, but showing a wish to assist and conciliate them, I confidently state that no opposition would be offered. If, on the other hand, it should wear the appearance of being used as a means of coercing the Arabs, and if the supervision and money payments were confided to untrustworthy hands, the whole scheme would collapse, the suspicions and hostility of the tribes would be aroused, and wholesale plunder, and defrauding the workmen would mar a great work it is so much to our national interest and material support of Turkey to have speedily accomplished.

Let us suppose a railroad completed from Basreh to the Mediterranean, and swift steamers in connection with it, landing passengers in India from fifteen to eighteen days from London. The political importance of such a step is too obvious to need more than a passing notice, but if the Government be sincerely anxious to strengthen Turkey, I know of no means whereby this may more surely be done than by placing it in such close communication with both England and India, At present, through Asia Minor and Turkish Arabia not a road exists; and though many of the districts are abundantly rich in all the qualifications for agricultural productions, as no means exist of transit, so are they only thinly cultivated. With a railway completed from the head of the Persian Gulf to the Mediterranean, and with branch lines or tramways from the large towns, near which it would pass, the most valuable products—wine, indigo, cotton, wool, &c., would be abundantly produced. And with the increased prosperity of the cultivator, and a fairer dealing than they now receive, so would the population increase. A hardy race fitted to supply the armies of the State, would be called into existence; and that country, which now is but a burden to the Turkish empire, would become one of its most vigorous children. I am sure I shall be borne out by those who know the Turkish character best, in saying that the importation of Anglo-Saxon capital, energy and skill, is the surest means of strengthening Turkey, and though the Porte has been loth to recognize and acknowledge the fact, recent experience of the marvellous strides the Western nations are now making, must convince the Government that in keeping peace with nations around lies the chief element of security. And should not the exodus of the Circassian

tribes be another warning? Slowly, but surely, Russia is endeavoring to accomplish her hereditary tradition; and in another struggle between that nation and Turkey, it may be that England will have to stand alone in the mighty contest.

The unity that a railway from the Mediterranean to the Persian Gulf would give, is invaluable—not only in a military point of view, in bringing troops and material from India, offering a barrier against any advance in that direction—but in giving confidence and an assurance to the warlike tribes who might then be called on to assist, that the interests of the Sultan's throne, and of the English whom they obey, had been trained to know so well were identical.

The buoyancy of Indian finance tells of the increasing prosperity of the country; by a just though firm rule, and teaching the people that their well-being depends on our prosperity, content and happiness might again reign in the hearts of the descendants of those who, fighting valiantly for us for our first existence in India, were deemed worthy to be sent to Egypt to oppose the mighty armies of the French Directory. And with the Indus as a barrier against invasion from the Northwest, and the main lines of railway completed through India, enabling the Government to concentrate a large force on any threatened point, what should prevent India from sending 50,000 well-disciplined troops to strengthen Turkey, if threatened with invasion? Steamers, conveying 600 men each, with the *materiel*, could land them in Basreh in nine days from Bombay, and six from Kurrachee, when, with a railway completed, the first detachments could be on the shores of the Mediterranean in three days more. If, then, while strengthening Turkey, we can ameliorate the condition of any part of her population now so much needing it; if by the importation of English capital we can give a stimulus to her trade, and so develop the resources of the country; we combine the two points by which alone, humanly speaking, Turkey can be saved from utter prostration, and so become the prey of the gigantic Russian empire, whenever another European war gives us such full occupation that the protection of this now decaying nation shall be beyond our power. There can be no doubt but that the Turk as a people is passing away; still it does not follow that the empire and the Government shall pass into the hands of other European powers.

Among the races which now inhabit the land, numerically larger, and far more energetic than the Turk, it may be, that a people may yet be found who, fostered by those who have at heart the real integrity of the empire, and with no religious antipathies between them and their powerful neighbor, may yet hold the Government in that city, to obtain possession of which has for so long been the great policy of Russia, so long the determination of England to prevent.

☞ The Secretary of the Treasury has issued the following regulations for the exchange of coupon for registered bonds:

Parties holding coupon bonds of any loan of the United States, except the loans of September 9, 1850, (Mexican indemnity,) and March 6, 1861, (Oregon War,) can exchange them for registered bonds of the same loan by presenting them at the office of the Secretary of the Treasury. They should be accompanied by a letter requesting the exchange, which should state the numbers and denominations of the bonds sent, and the act under which they were issued, or the title by which they are known. The letter should also state the denominations of the registered bonds wanted in exchange, in whose name they are to be issued, the disposition to be made of them after they are issued, and the place where the interest is to be paid. Interest on registered bonds is payable by the Treasurer of the United States at Washington, Assistant Treasurers of the United States at New York, Philadelphia, Boston, New Orleans and St. Louis, and United States Depositories at Baltimore, Cincinnati and Chicago.

Railroad Earnings—Weekly.

The earnings of the Chicago and Northwestern Railway for the week ending August 21, 1864, are as follows:

Passengers	$32,164 12
Freight	73,696 96
Mail	1,405 36
Express	1,402 75
Total	$108,669 19
Same period last year	69,107 82
Increase 57 24-100 per cent	$39,561 37

For three weeks ending Aug. 21, 1864, the earnings were $298,103 33, against $187,468 96, in 1863—an increase of $110,634 37. From June 1, to August 21, 1864, (11 weeks) the earnings were $1,320,782 35, against $822,890 80 in 1863—an increase of $497,891 55.

The earnings of the Marietta and Cincinnati Railroad for the 3d week in August:

	1864.	1863.
Passengers	$12,841 23	$4,374 53
Freight	8,853 88	6,190 22
Mail, express & telegraph	1,125 58	875 00
Total	$22,820 69	$11,439 75
Total since Jan. 1	$608,318 65	$383,348 36

The traffic of the Great Western Railroad for the week ending August 19th, '64, was as follows:

Passengers	$29,845 30
Freight and live stock	20,350 28
Mails and sundries	1,253 44
Total	$51,457 02
Corresponding week of 1863	39,213 51
Increase	$12,243 51

The earnings of the Grand Trunk Railway for the week ending Aug. 13th, 1864, (including the receipts of the Montreal & Lake Champlain and Buffalo & Lake Huron Railways), were: $101,503 00
Corresponding week, 1863 ..... 81,584 00
Increase $19,919 00

The earnings of the Racine and Mississippi and Northern Illinois Railroad for the week ending Aug. 14, 1864, were:

	1864.	1863.
Passengers	$2,518 83	$1,811 36
Freight	6,369 91	3,511 34
Express	104 16	75 00
Mails	296 58	296 58
Total	$9,289 48	$5,694 28
Increase		$3,595 20

Receipts from January 1st to Aug. 14:

1864	$337,273 11
1863	205,184 31
Increase	$132,088 80

The earnings of the Michigan Central Railroad for the 3d week in August, 1864, were $47,648 57
Corresponding week of previous year .. 77,972 48
Increase $30,323 91

The earnings of the Michigan Southern and Northern Indiana Railroad for the 3d week of August, 1864, were $48,584 00
Corresponding week of previous year .. 74,222 00
Increase $25,688 00

The earnings of the Chicago, Burlington and Quincy Railroad for the first two weeks in August were $188,278 87
Corresponding weeks of previous year 140,771 31
Increase $47,507 56

The Detroit and Milwaukee Railroad traffic for the week ending Aug. 18, 1864, was ... $25,297 07
Corresponding week of previous year .. 16,369 64
Increase $8,927 43

The earnings of the Chicago and Alton Railroad Company for the week ending August 23, were:

	1864.	1863.
Passengers	$24,135 70	$14,245 42
Freight	46,853 12	24,554 22
Sundries	1,217 23	2,169 41
Total	$72,266 05	$40,969 05
Increase 1864		$31,297 00

The earnings of the Chicago and Rock Island Railroad for the 3d week in August, 1864, were $70,354 00
Corresponding week of previous year .. 37,854 00
Increase $32,500 00

The earnings of the Cleveland and Toledo Railroad for the 3d week in August were .. $34,212 00
Corresponding week of previous year .. 21,563 00
Increase $12,649 00

St. Paul and Superior Road.

The St. Paul *Press* speaks most encouragingly of the prospects and progress of the railroad from that place to Lake Superior. It says the twenty mile section nearest St. Paul, and the heaviest of the whole road, will be completed by January 1st, 1865. It adds: "Captain W. L. Banning, a prominent director of the road, informs us that measures are on foot to establish furnaces at Lake Superior, to manufacture the rail to be used by the road. No better iron can be found in the world than exists there, and the project is perfectly feasible, the very favorable tariff on iron tending to the development of the wonderful resources of that region.

Philadelphia and Erie Railroad.

The Erie City *Dispatch* of Aug. 18, says: A special train came in on the Philadelphia and Erie Railroad last evening from Williamsport. This is the first passenger train which has come through over the road.

Dubuque and South-western Railroad.

The iron for this road has already arrived at Dunleith, and the road will, as soon as possible, be put in operation to Marion and Cedar Rapids.

British Railroads.

There are now in the British Islands three hundred and seventy-five distinct railway companies, who own eleven thousand five hundred miles of road. They carry above eighty million passengers yearly, and above thirty million tons of merchandise and minerals. They give employment to probably not less than two hundred thousand persons.

☞ The citizens of Lawrence, Mass., are moving earnestly in the matter of horse railroads in their city.

☞ John B. Page, of Rutland, Vt., has been appointed trustee of the second mortgage bondholders of the Rutland and Burlington Railroad Company, in place of John W. Stewart resigned.

☞ A survey of a route for railroad track from West Barnstable in Woods' Hole, is suggested by several gentlemen who are interested in selecting the best line of travel between the Vineyard and Boston.

American Railroad Journal.

Saturday, September 3, 1864.

Stock Exchange and Money Market.

The London Economist after long cogitation has come to the conclusion, that the people of the United States can bear taxation without feeling it, to the extent of six hundred millions of dollars per year. It is believed that the amount of internal revenue and customs duties under the last enactments by Congress will exceed that sum. And when we consider that there are eight hundred millions of treasury and bank paper afloat, and shifting credits which may be estimated at as much more, it is very evident that the means of paying our taxes are abundant. Every one who has commodities to dispose of or useful labor to offer in return for hire, can get money enough to pay every charge made on his property or earnings. It is a fortunate circumstance that inflation is a two edged sword, and cuts both ways. It is the opinion of many financial writers that a general inflation remedies its own evils, and that its effect is nominal rather than real upon the country which is subject to it. It is asserted in a leading journal, by a writer on the British money market and its present condition, that "practically, the currency of (his) country in Bank of England notes and provincial notes and bills of exchange is £800,000,000," or in other words four thousand millions of dollars.

This unquestionably exceeds in amount that of the loyal states at the present moment, and if England can prosper under such an inflation we do not see why we may not. The specie basis of this system is by the same writer declared to be not more than £20 or £30,000,000, or from 100 to 150 millions of dollars. He also asserts "that a capitalist who should possess himself of £14,000,000, of the Bank of England notes, could compel it to stop payment and induce a National bankruptcy in a country that has eight thousand millions of property to meet its engagements."

The same writer asserts that notwithstanding that "for want of pecuniary facilities the commerce of England is much less than half of what it might be, and that business is but yet in its infancy." Now if all this be true, and we cannot dispute the assertion, why may we not apply these comparative facts to the solution of our own financial difficulties, look them squarely in the face. Both in England and the United States at this moment gold is rather a commodity, an article of purchase and sale rather than a currency, and the project is there already entertained of substituting for it "notes of the state" based "on consols and other undoubted securities" which can be exchanged for this commodity of gold whenever their holder is inclined to do so. In the meantime taxes on an immense scale are levied and collected without difficulty, and notwithstanding the enormous amount of its mixed currency the country is prosperous beyond all previous example.

So it seems that our own condition is by no means anomalous, while our resources continue to increase under all hindrances at an enormous rate. We may console ourselves therefore with the reflection that practically we are in as good a position materially as England herself, although gold costs more in our paper than it does in hers. We have the one disadvantage however of being engaged in an expensive war, and at present are buying more foreign goods than we pay for in our own exports or at least have been, up to within a month or six weeks, when the latter have been running up to three and four million dollars per week. And again. Neither in London or Paris is there any such institution as a Gold board, whose daily sales are received as a standard for the price of gold, and where combination, rumors, and frauds are brought to bear upon the credulity of the public and upon the market. We believe that if England were again at war, and a Gold Exchange should be established in London, it would be possible to run up the prices there to a higher scale than they ever were before, and we believe that persistence in such a scheme would bring even the Bank of England to a full stop. It is absurd therefore for us to be pinning our entire faith on one article like gold, or to imagine that its present price will lead to the overthrow of our commerce or finance.

If gold were our only currency, it would not be possible to carry on the war three months, nor would it be attainable in sufficient quantities to meet our taxation a single year, estimating our paper dollar at 40 cents, or in other words reducing our taxation to that standard. Paper money saved France even in its most desperate circumstances, it carried England through long and bloody wars, and now supports its commerce and industry; paper money made this country independent, it has even maintained a wicked rebellion for three years, and by paper money it will be put down. Those who think this world, and all its inhabitants, all its pursuits, all its happiness, and all its grandeur depend on the special circulation of one or two particular metals mistake the designs of the Almighty, and the objects of their own existence.

We may therefore take courage, and go through our task of fighting against treason, and paying the expense of maintaining law and order. We may even console ourselves with the efficiency of our financial system, which isolated just now from all others, and frowned upon by those nations who desire our ruin, is doing its work and doing it well.

The aggregate value of the imports of general merchandise, other than dry goods and specie, at this port for the week ending August 27, was $2,235,677, against $1,404,900 in 1863, and $1,609,966 in 1862.

The amount of exports from New York last week was $7,257,034 against $2,936,164. The shipments of specie for the week were $206,498. The exports since January 1, have been $143,259,016 against $119,047,364, an increase of $21,211,652 on the same period in 1863. The customs gold revenue at New York, specifically pledged to the payment of the interest on the funded and fundable debt of the United States from January 1 to August 27, was $51,863,251, an increase of $16,947,548 on last year.

The value of foreign goods imported into the port of Boston for the week ending August 26, was $752,953, against $577,848 for the corresponding week in 1863. The exports were $600,239 63 against $132,098 for the corresponding week in 1863.

The foreign exports from the port of Baltimore during the past week were valued at $156,500.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

☞ We call attention to the advertisement of CABOT & Co., on the first page. This firm are agents for the Lehigh Rolling Mill, the Allentown Rolling Mill, the Palo Alto Rolling Mill, the Philadelphia Rivet Works and others, and are always prepared to receive and fill orders for the best quality of refined and ordinary bar iron, first class railroad iron, finest quality of boiler and tank rivets, railroad spikes, superior locomotives, &c., &c., all at manufacturers' prices. They are ready to furnish light T rails suitable for turnouts and collieries at short notice. They also deal largely in anthracite foundry and forge pig iron, and acting in connection with Messrs. Cabot & Etting, Philadelphia, they have command of both markets.

Railway Progress in India.—Facilities for Shipping Cotton.

The annual report on the railways in India for 1864 shows that two thousand six hundred and eighty-seven miles of railway are already completed in that country, and as many more are authorized by Government. £3,300,000 have been expended in the work during the past year, while the whole capital raised for the construction of railways in India to the first of May in the present year amounted to £54,285,088, and the total expenditure to £51,144,722. The traffic of the railways of India is increasing. In the year ending the 30th June, 1863, the amount received for the conveyance of goods was £1,033,000, and that for the conveyance of passengers £679,400. In the previous year the receipts for goods were £590,000, and for passengers £438,829. The net earnings in 1863 were £780,000, compared with £434,000 in 1862; and these are only the aggregate results of the working of several incomplete and broken lines.

Almost all the railroads now in course of construction in India either are, or, before they are completed, will be connected with the cotton fields of that country. The Bombay, Baroda and Central India Railway runs from the cotton districts of Guzerat to Bombay, and is completed, except one short break, from Ahmedabad to that port. The distance open is 185⅛ miles, and for

the greater part of that distance the railway passes through the great cotton districts of Guzerat, Baroda, Baroche, Surat and Damun.

The Great Indian Peninsular, which is now completed for a distance of 553 miles from the port of Bombay, runs far into the cotton district of Central India, though it has still to be carried a considerable distance before it reaches the great cotton districts of Oomrawuttee and Nagpoor. It is still further from the cotton district of Saugor and Jubbulpoor, although it is intended that it shall ultimately pass through that district, and unite it with the Ganges and with the East Indian Railway at Allahabad.

The southern branch of the Great Indian Peninsular Railway has also been carried into the cotton district of the South Mahratta country, being completed as far as Sholapoor. It is still, however, a great distance from the Dharwar and the Bellery districts, which are amongst the finest cotton districts of India.

The Madras Railway is completed from sea to sea—that is, from Madras to Beypore. It passes through the middle of the fine cotton-growing district of Coimbatoor, and will have a great effect in stimulating the production in every part of the Mysore district, which is said to be one of the finest in India.

There is not at present any railway through the cotton district of Tinnevelly, at the southern extremity of India, but it is so near to the sea that a line of moderate length would supply all its wants.

The most extensive line of railway at present completed in India is the East India line. It is open for a length of upwards of eleven hundred miles, with only one break, caused by the bridge at the river Jumna, a work of great magnitude, which will probably not be finished before the end of next year.

The railroad over the great mountain pass of the Bhore-Ghat was opened in April, 1863, and it is expected that the works across the Thull-Ghat will be completed by October in the present year.

☞ We invite the attention of our railroad and car building friends to the advertisement of Aug. C. Downing, who can supply any article required in the way of imported glass. Having made a "glass" a speciality for the past 20 years, he can meet any demands upon him, from the roofing of a depot to ornamenting a ladies' saloon car.

Mining Product of Great Britain.

The official report of mining operations in Great Britain and Ireland in 1862 shows that there are in operation 561 blast furnaces in the United Kingdom—in England 300, in Wales 130, and in Scotland 125. The yield of the mines in 1860 was 3,826,752 tons, in 1861 3,712,390 tons. The details of the product for 1862, including coal, are as follows:

		Value.
Coal, tons	81,638,338	£20,409,584
Pig iron, tons	3,948,469	9,358,672
Zinc tons	2,251	50,581
Silver, oz.	336,125	189,041
Lead, tons	69,031	1,436,345
Copper, tons	14,343	1,493,241
Tin, tons	8,476	984,216
Gold, oz.	5,209	29,890
Other Metals	—	250,009
Total value		£34,691,037

The Tin Mines of Cornwall.

The London *Times* says that there is but little doubt that unless a better price can be obtained for the article, Cornish tin-mining will be abandoned. Tin cannot be raised at a very large majority of the mines under £70 to £75 per ton; the present price is about £60. There are not more than half a dozen mines in the county which leave any profit to the adventurers. The system of underselling has had a ruinous effect, and it is thought that the only way to stop such proceedings is to have public sales, as in the case of copper. It is calculated that 15,000 tons of tin ore are raised annually in Cornwall, representing a revenue of over £1,000,000 sterling.

Railroad Earnings—Monthly.

The traffic of the Cincinnati and Chicago Air-Line Railroad for the month of July was:

	1864.	1863.
Freight	$22,461 94	$12,067 89
Passengers	26,426 48	15,570 58
Mail, express & sundries	4,661 74	2,569 40
	$53,550 16	$30,207 87
Increase		$23,342 29

The earnings of the Chicago, Burlington and Quincy Railroad for the months of May, June and July, were:

1864	$1,148,280 67
1863	1,086,693 28
Increase	$61,587 39

Suncook Valley Railroad.

At a meeting of Suncook Valley Railroad Co., held at Concord on the 16th ult., Reuben L. French, Chas. H. Carpenter, Stephen Henrick, S. N. Bell, Jas. H. Butler, Nath. Head and Henry F. Sanborn were elected directors. At a subsequent meeting of the directors, S. N. Bell was elected president; Lewis W. Clark, clerk; and E. W. Harrington, treasurer.

Use of the Waste Steam of Locomotives.

In France, the waste steam from the engine, instead of being allowed to escape into the air, is conduced from the escape pipe by means of a vulcanized India-rubber tube, to copper pipes, through which it circulates under the seats and flooring of the cars. As soon as the train is set in motion, the steam begins to circulate through the pipes, and warms the cars, first, second and third class equally, and being connected with each other by India-rubber tubing, they can be immediately detached or reunited at pleasure. In a trial of this plan on the Lyons line, two thermometers placed in first class cars marked sixty degrees Fahrenheit during the whole journey; and in the second and third class cars also, the temperature was found to be sufficiently elevated to allow of the longest winter's journey being accomplished without discomfort to the travelers.

Farmers and the Income Tax.

By a recent Internal Revenue Decision, farmer's incomes are to be thus estimated: The value of the live stock on hand at the beginning of the year is to be added to the amount paid for animals which are held alive at the close of the year. The sum thus obtained will be deducted from the amount obtained by adding the estimated value of the live stock held at the close of the year to the amount received for animals sold during the year, the amounts received for meats and vegetables, the productions of the farm sold during the year, or consumed by the farmer or his family, or consumed by animals kept for the purpose of pleasure. The difference thus obtained will be charged as income, and will be subject to proper deductions for the cost of carrying on the farm. No deduction can, however, be allowed for the cost of hay or grain produced upon the farm and consumed by cattle employed upon the farm.

☞ Mr. John A. Stewart, for the last eleven years associated with the United States Loan and Trust Company, has been appointed to fill the vacant Sub-Treasuryship in this city.

☞ The Swiss Central Railway has a trunk line from Basle to Olten and three main branches leading thence to Berne, Lucerne and Zurich, the three chief towns of the Confederation. The line to Olten starts from the station at Basle, which forms the terminus of the Alsace railway. Swiss railways are regulated by Berne time, twenty-six minutes in advance of Paris time kept on the French lines.

Injury to Cattle, Reasonable Care, Negligence.

The case of The Central Ohio Railroad Company against Albert G. Lawrence, in the Supreme Court of Ohio, was on error to the District Court of Guerney County of that State.

The original action was brought by Lawrence against the railroad company to recover damages for an injury to cattle by a locomotive, the cattle being on the railroad track, and having been some killed and others injured, as was alleged, by the negligence of those having charge of a passenger train of the railroad company.

The answer denied that there was any negligence. It appeared on the trial that plaintiff's cattle were injured, and killed by a train of cars transporting passengers, running as a passenger train upon the railroad, at the time and place stated in the plaintiff's petition; that said killing and injury resulted from the negligence of the servants of the defendant in charge of the train; that the train was running at a speed which was unusually fast for that train at that place; that when the cattle were injured, it was in the night season; that the train was behind time; that it was expected the train would meet another train going in an opposite direction, about one and a half miles from the place where the cattle were injured, within a few minutes from the time of the injury, that the train had connections to make with other passenger trains; that the train was running little if any faster than usual, and that on a track like that where the cattle were injured, running the train faster than the usual rate of speed would not increase the danger to cattle that might be on the railroad track in the night season.

The court charged the jury that the defendant was not liable, unless the injury was the direct result of the negligence of the agents of the defendant, and the burden was on the plaintiff to prove the negligence, that if the jury became satisfied from the evidence that the cattle of the plaintiff were killed by the cars of the defendant running against them, when they were on the track of the railroad of the defendant, and said cars were employed in conveying passengers on said road, and that when the cattle were killed the cars were being run faster than the usual or ordinary speed of that train at the place of the injury, and that such unusual speed contributed directly to the injury, and was not rendered necessary by some such important object as to avoid

a collision or to make a connection with some other train then the verdict must be for the plaintiff. That one of the considerations to determine the rate of speed at which cars may be run is the fact that cattle are liable to stray upon the track of unfenced railroads or roads only partly fenced, and in determining whether the train shall be run at an unusual speed, except when the speed shall be necessary in order to avoid a collision or to make a connection, or to attain some such desirable end, the agents of the company must consider and take into consideration the danger to cattle consequent upon such unusual speed. But the defendant cannot in any case be held liable because of unusual speed, unless it shall appear that such unusual speed contributed directly to the injury.

A verdict having been rendered for the plaintiff, and judgment entered thereon, the defendant filed a petition in error in the district court, and the judgment having been affirmed, a petition in error was filed in the Supreme Court.

GHOLSON, J.—The relation toward each other, of a railroad company operating an unfenced road, and the owners of cattle, has been settled by several decisions of this court, Kerwhacker *vs.* C. & C. R. R. Co., 3 Ohio St. Rep. 172; C., H. & D. Railroad Co., *vs.* Waterson 4 Ohio St. Rep. 424; C., C. & C. Railroad Co., *vs.* Elliot, 4 Ohio St., Rep., 474. The difficulty now is in the application of the principles established by those decisions.

The owner of the cattle, found on an unfenced railroad, is not to be regarded as a trespasser or wrong doer, but is entitled to the exercise of ordinary and reasonable care, under all the circumstances, to avoid any injury to his cattle. A railroad company like any other land proprietor, has a right to the free, exclusive and unmolested use of its railroad track, not exempt, however, from the duty of so using its own property as to do no unnecessary injury to another, and bound, when using its property in a mode which may result in injury to another, to the exercise of due care. If a railroad company is in the reasonable use of its railroad track, its own property, with reference to any rights of others, and on the occasion of an injury to cattle found on a railroad track, exercises reasonable care, under all the circumstances, to avoid the injury, it cannot be held liable to the owner, of the cattle. But if, as to any rights of such owner, the use being made of the railroad track is unreasonable, and dangerous, or there is a want of proper care to avoid injury to his cattle found on the track of the road, and there is injury resulting from such unreasonable and dangerous use of the railroad track, or from such want of care, the railroad company will be liable therefor to the owner.

The question is, what, as to the owner of cattle is to be regarded an unreasonable and dangerous use of its railroad track by the company? It is certainly not enough that the use should be dangerous, it must also be unreasonable, and that with reference to some right of the owner of the cattle. The very object of a railroad is the transportation of persons and property, at a high rate of speed, by means of ponderous engines and cars, and this must necessarily be dangerous to cattle coming on the track. That the owner of cattle have no such right or interest in the uninclosed lands of their neighbors, as to entitle them to claim that its use for a railroad is unreasonable, is settled by the decisions to which reference has been already made. Have they any right to complain as to the degree of speed at which it may be the interest of a railroad company to transport persons, and property, and at which persons may be willing to have themselves and their property carried on a railroad? We do not think that they have any such right; and the admission of such a right would be inconsistent with the progress of improvement in facilities for travel and commerce, with which progress such a right as that of an owner of cattle to have them run on the uninclosed lands of others ought not to interfere. In determining, therefore, the rate of speed at which its trains shall run, the same being otherwise reasonable and proper in view of the object to be accomplished, we do not think a railroad company is bound to consider the increased risk to cattle on its track, which may be thereby occasioned, and lessen the speed on that account. The use, on land, of engines and cars running on a railroad track, at a high rate of speed, though dangerous, is a reasonable use of land, because it is for a proper object, and a highly beneficial purpose, and the danger may be avoided by proper care. There is certainly a risk to cattle running at large in the vicinity of an uninclosed railroad track, but this risk the owners of cattle must take, unless they choose to avoid it by keeping the cattle within their own inclosures. If they do not choose to do this they can ask no more than that the agents of the railroad company in the legitimate conduct of its business, running its trains with a speed regulated by the grade of its road, the capacity of its locomotive power, and the safety of the persons and property carried shall, with due regard to the safety of persons and property in their charge being the paramount consideration, exercise what, "in that peculiar business, would be ordinary and reasonable care to avoid unnecessary injury to animals casually coming upon their uninclosed road," 3 Ohio St. Rep. 173. Where there is nothing in the running of a train or in its rate of speed, at a particular time and place, inconsistent with the general and legitimate conduct of the business of the railroad company, we cannot see how the occasion and necessity therefor can properly concern an owner of cattle running at large. He cannot properly discuss with the company the proper exercise of the discretion vested in its agents as to the time or occasion of running its trains, and has no right to bring forward its time table, and list of connections, and enter into an inquiry whether the rate of speed was greater than usual for a particular train, at a particular place, and whether such rate of speed was necessary to make a connection or avoid a collision, or for some other proper object.

No evidence is referred to in the bill of exceptions, which shows that the rate of speed at which the train was running was a rate at which the railroad company, in the ordinary and legitimate conduct of its business, might not reasonably and properly run its trains. Such being the case, we think the injury should have been limited, in accordance and in connection with the rights and liabilities established in such cases, as in the case of the C., C. & C. R. R. Co., *vs.* Elliot, 4 Ohio St. Rep. 474, to the question, "whether, under all the circumstance of the case, the defendants exercised reasonable and proper care in running their engine to avoid injury to the cattle of the plaintiff." And, as said in the case of the C., H. & D. R. R. Co., *vs.* Waterson, 4 Ohio St., Rep. 434, "the facts and circumstances relied upon to show a want of *proper* care, were for the exclusive consideration of the jury."

In accordance with these views, the judgment of the district court and of the court of common pleas must be reversed, and the case remanded to the court of common pleas for another trial.

Judgment reversed.

Increase of Railroad Earnings.

For the purpose of showing the increase of earnings of the railroads during the war, the following comparison of the gross receipts of six roads during the month of July 1861 and 1864 will be found of interest:

	July 1861.	July 1864.	Increase.
Illinois Central...	$170,209	$404,106	137 per ct.
Mil. & P. du Chien	107,399	139,547	30 "
Michigan Central.	123,377	263,144	113 "
Cleveland & Tol..	56,138	113,315	102 "
Erie	377,905	974,816	158 "
Pitt., F. W. & Chic.	178,410	435,631	172 "

The rate of increase in earnings varies from 30 per cent. to 172 per cent. and averages considerably over 100 per cent. The following shows the market value of the shares of the respective roads:

	Aug. 1861.	Aug. 1864.
Illinois Central	64½	127
Milwaukee & Prairie du Chien.	15	62
Michigan Central	42	134
Cleveland and Toledo	29	125
Erie	25	109

There is a wide margin between the increase of earnings and the increase in the market price of the shares. This is attributable to the fact that before the war the bonds and preferred stock of the roads absorbed nearly the entire profits. The large increase of the earnings has enabled the roads to pay dividends upon all their securities, giving to the common stock a value almost equal to that of bonds or preferred stock.

The Developement of the Pennsylvania Oil Region.

We look in vain through the history of past discoveries of the mineral wealth of the earth, for any one of them that will equal, in the same length of time, in the growth and extent of its developement, that of the Pennsylvania Oil Region. So suddenly has this business sprang into existence, and so vast its present extent, that it has been an impossibility to present to the public anything more than an approximation of its statistical value. Petroleum was discovered just when it was most needed, when there was trouble in the manufacturing world about the production of oils, of which machinery alone requires immense quantities for lubricating purposes. The problem of a cheap production of artificial light was also becoming serious, in consequence of the exhaustion of the whale fisheries, and even by the increasing value of the fat of the hog, in consequence of its employment for illumination. In camphene and such burning fluids, there were dangerous gasses, which led to frequent explosions of lamps, and to some painful instances of loss of life. To our own people this discovery has been a blessing, but to foreign nations a boon which it is shown they appreciate by the heavy and increasing demand for the article that has already become so important a commercial material.

For the past four years, the valley of Oil Creek, which has been and is now, the main producing locality of the Region, has yielded an annual supply of fully 1,500,000 barrels, of say forty gallons

each, of petroleum. The excitement that followed the first discovery of the large flowing wells was very great, and prevaded all classes. Thousands of industrious, energetic men came here to try their fortune. But while many failed, the general result in a few brief years, has been the creation of a business that in a manner has revolutionized the commercial world. And even now, but few, if any of those engaged in the business, can realize the extent to which it will be increased. A few recollections of the early history of its discovery and the ideas then prevailing among operators, may not be uninteresting to our readers generally.

The prevailing idea among the first operators was, that the best location for a well lay immediately upon the banks of the running streams, as near as practicable to the water. Hence the first leases upon Oil Creek were so located. Some good wells were struck, but the front row of lots being soon taken up, forced other operators to develope the lots a short distance back of these.

Equally as successful results followed. The same circumstances soon caused the whole breadth of the flats to be operated upon, as far back and even into the sides of the hills which skirt them. In each and every locality have good wells been obtained. But from the fact of so many large wells having been struck upon the valley of Oil Creek, and the supply being greater than the demand, it was not deemed necessary to seek any other locality but the valley of Oil Creek for further sources of supply. Consequently, the valleys formed by the numerous streams emptying into Oil Creek, and the Allegheny river, as well as the valley of the river itself were neglected. The prices for quite a length of time after the first material discoveries, averaged from twenty to thirty cents per barrel, at the wells.

As soon as the utility of petroleum began to be discovered, its value increased. In the fall of 1862, petroleum was sold for $10 per barrel. The realization of such a price as this for a product that flowed almost spontaneously from the earth, and in such quantities that a single well often produced from one thousand barrels to as high as even three thousand barrels per day, attracted the serious attention of men of enterprise, as well as the capitalists of the whole country. This soon assumed an epidemical form, and the "Oil fever" began to rage among all classes especially in the large cities, to an alarming extent.

During the past winter and spring, the parties alluded to, went quietly to work buying up all the territory that could be obtained upon the favored valley of Oil Creek. The quantity of this being limited, was soon taken up. The fever having now assumed the shape of speculation, and the demand for oil territory increasing, other parties concluded to buy up not only the oil lands adjoining Oil Creek, but also the hitherto only partially developed or wholly neglected oil lands along the Allegheny river. This general movement on the part of our moneyed men was viewed as wild and visionary by the capitalists of the Old World, and of some in the new. But guided by that unerring sagacity which everywhere characterizes the American business man, some of the first capitalists of the nation invested in the oil lands of the Pennsylvania region. Owing to these investments the extent of the Petroleum field has been materially increased. Every spot of ground having the slightest appearance of oil lands for a space of probably not less than one hundred miles square, in the aggregate, have been bought or is now being negotiated for.

In order that the reader may form idea of the extent of these operations, we shall endeavor to give a few statistics. We estimate that the new oil companies formed in the various parts of the country during the past winter, spring, and up to the present date, will number fully two hundred. The capital stock of these companies will present an aggregate of at least $100,000,000. The amount of capital that had been previously invested in the business of production and manufacturing we should estimate at from $12,000,000 to $15,000,000, and by including the different ramifications of the business, it will amount to a still greater sum.

These estimates may seem large to the casual reader, but to those who have given the subject due attention, they will appear reasonable enough.

The question will be doubtless asked by some, whether it is barely possible that any number of these companies will realize sufficient to pay for the heavy investment required? We have no hesitation in giving an affirmative answer, so far as our past experience has enabled us to judge. Of course there will be individual failures, and plenty of them, as there is in every other business where prudence and foresight are required. But in the aggregate we have not the slightest doubt in the realization of not only the full amount invested, but of more too. Oil now sells at the wells readily for $10 per barrel. It is fair to presume that this will be the approximate ruling price in future. A daily production of fifty or one hundred barrels per day will not only pay a handsome dividend, but will eventually, if the price of oil still farther advances, yield a handsome profit. The cost of boring a well does not exceed $3,500, including the machinery. And the time required from twenty to thirty days.—*Oil City Register, August* 18.

☞ A Parliamentary paper gives the following statistics in relation to the income tax of Great Britain in the years 1862 and 1863:—

	1862.	1863.
Tax received	£3,222,033	8,376,405
Persons assessed	285,459	293,468
Am't of incomes assessed	89,013,493	93,322,864
Persons with less than £100	18,761	18,700
Between £100 and £150.	135,262	139,297
Income above £50,000	67	80

—In Ireland the number of persons charged had fallen off from 17,602 to 17,438; the amount paid from £168,132 to £167,834; and the income assessed from £4,677,568 to £4,673,743. The number paying on incomes of less than £100 a year had diminished from 1,264 to 1,124, but the number with £50,000 a year and upwards had risen from two to three.

☞ The exports of treasure from San Francisco from July 1 to 31, were $5,729,553
Previously this year 28,993,711

Total since Jan. 1, 1864 ..... $34,723,264
Corresponding period, 1863 26,007,183

Excess this year $8,716,081

Cold Rolling Iron.

Interesting experiments have been made with the process of cold rolling as applied to iron. In one case, on testing specimens of cold rolled iron, a black bar from the rails broke with 26,173 tons per square inch, a similar turned bar with 27,119 tons, and a cold rolled bar of the same iron sustained 39,388 tons. The elongations, which may be considered as the measure of ductility, were 200 and 220 per unit of strength in the case of ordinary iron, and .079 in the case of the cold rolled iron. A plate of cold rolled iron sustained no less than 51.3 tons per square inch. Endeavors are being made to apply this invention to railway bars.

☞ The first through train from New York to St. Louis by the broad gauge route *via* the Atlantic and Great Western Railway reached its destination on the 26th of August in forty-four hours.

☞ Gov. Dennison, of Ohio, declines the appointment made by the President as one of the Commissioners to examine the roads to be constructed by the Union Pacific R. R. Co.

Railroads at the West.

During the past ten years there have been built at the West 3,656 miles of railroad, at a cost of $253,820,364, mostly by Eastern or imported capital. The Illinois Central Railroad Company alone brought into Illinois $30,000,000, and built a road which enabled the Federal Government to sell $11,000,000 worth of land, and the company to sell $20,000,000 more to actual settlers; making over $61,000,000 concentrated in this State by the operations of one company. The chief effect of this has been to swell the aggregate grain receipts at Chicago during the ten years to 158,544,554 bushels, which, at an average price of 66 cents per bushel, (the volue for 1860 at Chicago,) would be worth $126,000,000, thus exceeding by $31,000,000 the cost of the railroads, through the agency of which the grain was made available. In 1861, the grain increased to 47,697,509 bushels, the Southern routes being closed; and in 1862 the amount was 60,150,390 bushels. These figures but indicate the extent of that prosperity which has developed so rapidly during the last ten years in the northern section of the West.—*Western R. R. Gazette.*

The Iron Business of Lake Superior.

The amount of iron ore shipped from Lake Superior in 1855 was 1,447 tons against 116,998 tons in 1860, and 185,557 tons in 1863.

These amounts, especially those for the last two years, fall far below the demand, the difficulty having been in procuring transportation for the ore, and men to mine it. The quantity actually spoken for to supply the various furnaces using this ore, before the opening of navigation in 1862, was over 140,000 tons, while in 1863, 250,000 tons would not have supplied the demand.

Large investments have been made in timbered lands, along the lines of the Marquette and Ontonagon, and Peninsula Railroads, as well as on Big Bay de Noquet, with a view to erect blast furnaces for the manufacture of charcoal pig iron.

The average value at Marquette of the ore shipped during the past year was $5 per ton, and that of the pig iron produced $45 per ton, giving the aggregate value of the iron product of the country for 1863, $1,327,245,245.—*Marquette Journal.*

British Emigration.

The last report of the British Emigration Commissioners contains some exceedingly interesting statistics. It appears that the emigration of 1863 approaches that of the years of famine beginning with 1847. During the last year 223,758 emigrants left the United Kingdom, 27 per cent. of them English, 7 per cent. Scotch, 52 per cent. Irish, 4 per cent. foreigners, and 10 per cent. not distinguished. 146,813 of them went to the United States, 53,054 to Australia and New Zealand, 18,083 to British North America. At this rate the drain on the laboring population of Great Britain must be in excess of the losses of our war. It happens also that the emigration to this country comprises a very great proportion of single men, of the same class required in military service. The commissioners, however, do not think that this circumstance warrants the conclusion that any large number of emigrants are attracted here for enlistment, inasmuch as the proportion of single men last year was almost precisely the same as in 1860, the year before the war began. Much of it is due to distress at home, and it has been immensely facilitated by the liberality of preceding emigrants, who remitted, in 1863, more than £412,000 sterling, to bring over their relatives in Ireland. This single circumstance must speak volumes in favor of the prosperity which has thus far attended our prosecution of this great war.

☞ Providence, R. I., has voted to allow a horse railroad track to be laid through her principal streets.

DOUBLE FLANGE R. R. CAR WHEELS.

BALL AND WHEELOCK, PATENTEES.

Seventy Miles an Hour.

Saves Life and Property.

RIGHTS FOR SALE BY

DAVIDSON, DICKINSON & CO.,

CIVIL ENGINEERS,

229 Broadway, N. Y.

DUNBAR'S PATENT ANTI-FRICTION STEAM

PISTON PACKING,

SAVES 5 TO 20 PER CENT. OF FUEL.

Applied to NEW and OLD Engines,

By Hamilton E. Towle,

ENGINEER,

78 CEDAR ST., NEW YORK.

SAVING OF FUEL TO PARTIES USING STEAM.

DAMPER REGULATORS.

GUARANTIED to effect a great saving in fuel, and give the most perfect regularity of power. For sale by the subscribers who have established their exclusive right to manufacture Damper Regulators, using diaphragms or flexible vessels of any kind. CLARK'S PATENT STEAM AND FIRE REGULATOR COMPANY, No. 5 Park Place, N. Y.

WANTED

A gentleman with a capital of $25,000 to take an interest in a Car Manufacturing Establishment at New Haven, Ct. The business is already established, with a large capital invested, and in successful operation. Address this office, or box 2287 P. O., New Haven, Ct.

ENGINEERING AND CHEMISTRY.

UNION COLLEGE.

DEPARTMENT OF APPLIED SCIENCE.

I. COURSE OF INSTRUCTION IN CIVIL ENGINEERING.—Embracing Drafting, Surveying and Leveling, General Construction in Masonry, Carpentry, &c., Road Making Bridge Building, Water Engineering, &c.; under the direction of Prof. W. M. GILLESPIE, LL. D.

II. COURSE OF INSTRUCTION IN ANALYTICAL CHEMISTRY.—Comprising Qualitative and Quantitative Analysis, with special reference to Students of Agriculture and of Medicine, Pharmaceutists, Manufacturing Chemists, Mineralogists, &c.; under the direction of Prof. C. F. CHANDLER, Ph. D.

☞ The next term commences Sept. 16.

For Circulars, &c., address "Registrar of Union College, Schenectady, N. Y." 41 34

Car Duck. Hemp Packing.

HEAVY 4 Ply Fitchburg Duck 100 to 140 inches wide.

BEST HACKLED HEMP PACKING.

For sale by

WILLIAMS & PAGE, Boston.

LEMUEL W. SERRELL,

SOLICITOR OF

AMERICAN & FOREIGN PATENTS,

NO. 121 NASSAU STREET,

NEW YORK.

RICHARD DUDGEON,

MACHINIST,

24 COLUMBIA ST., NEW YORK,

WOULD respectfully inform his friends and the public that he has removed to his new Building No. 24 Columbia Street, where he is prepared to furnish

Hydraulic Jacks, of from 4 to 150 tons lifting power. PULLING JACKS of different sizes.

Hydraulic Presses WITH PLATENS.

Hydraulic Punches for punching iron from three-eighths to 1 inch thick. Force Pumps for Hydraulic Presses. Force Pumps for testing tubes, cylinders, etc.

STEAM CARRIAGES for good hard roads.—Squirting Oil Cans, also Danver's Patent Steam Hammer

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO., NEW YORK, Aug. 16, 1864

AT A MEETING OF THE BOARD OF DIRECTORS of the Illinois Central Railroad Company held this day, the following resolutions were adopted:

Whereas, In the mortgage given by this company to the trustees to secure their construction bonds, it was agreed that the moneys received upon sales of the lands mortgaged, as fast as received, be applied to the cancellation of said bonds, and it has become necessary for this purpose to take up a portion of the bonds in pursuance of a provision contained in each bond, the company may "pay the same at any time to be named by them by adding to the principal a sum equal to twenty per cent. thereof."

Resolved, That the Company will, on the first day of October next, pay the seven per cent bonds for one thousand dollars each, numbered from one to three thousand, (1 to 3 000,) with twenty (20) per cent. added to the principal thereof, upon surrender at its office in the City of New York; and that it doth hereby name the first day of October, 1864, as the time when the principal of said bonds shall be paid, after which day interest upon them will cease.

Resolved, That the holders of the scrip stock of this Company be required to pay the unpaid ten per cent. upon the stock held by them respectively, on or before the twenty-sixth day of September next, at the office of the company in the City of New York; and that upon all sums unpaid, interest will be charged from that day; and that after the twenty-sixth day of September next, no transfer shall be made of stock which shall not be paid in full. THOMAS E. WALKER, Treasurer.

U. S. 7-30 LOAN.

The Secretary of the Treasury gives notice that subscriptions will be received for Coupon Treasury Notes payable three years from Aug. 15th, 1864, with semi-annual interest at the rate of seven and three-tenths per cent per annum,—principal and interest both to be paid in lawful money.

These notes will be convertible at the option of the holder at maturity, into six per cent gold bearing bonds, payable not less than five nor more than twenty years from their date, as the Government may elect. They will be issued in denominations of $50, $100, $500, $1,000 and $5,000, and all subscriptions must be for fifty dollars or some multiple of fifty dollars.

The notes will be transmitted to the owners free of transportation charges as soon after the receipt of the original Certificates of Deposit as they can be prepared.

As the notes draw interest from August 15, persons making deposits subsequent to that date must pay the interest accrued from date of note to date of deposit.

Parties depositing twenty-five thousand dollars and upwards for these notes at any one time will be allowed a commission of one-quarter of one per cent, which will be paid by the Treasury Department upon the receipt of a bill for the amount, certified to by the officer with whom the deposit was made. No deductions for commissions must be made from the deposits.

SPECIAL ADVANTAGES OF THIS LOAN.

IT IS A NATIONAL SAVINGS BANK, offering a higher rate of interest than any other, and THE BEST SECURITY. Any savings bank which pays its depositors in U. S. Notes, considers that it is paying in the best circulating medium of the country, and it CANNOT pay in anything better, for its own assets are either in government securities or in notes or bonds payable in government paper.

It is equally convenient as a temporary or permanent investment. The notes can always be sold for within a fraction of their face and accumulated interest, and are the best security with banks as collaterals for discounts.

Convertible into a Six per cent. 5-20 Gold Bond.

In addition to the very liberal interest on the notes for three years, this privilege of conversion is now worth about three per cent per annum, for the current rate for 5-20 Bonds is not less than FIVE PER CENT PREMIUM, and before the war the premium on six per cent U. S. stocks was over twenty per cent. It will be seen that the actual profit on this loan, at the present market rate, is not less than ten per cent per annum.

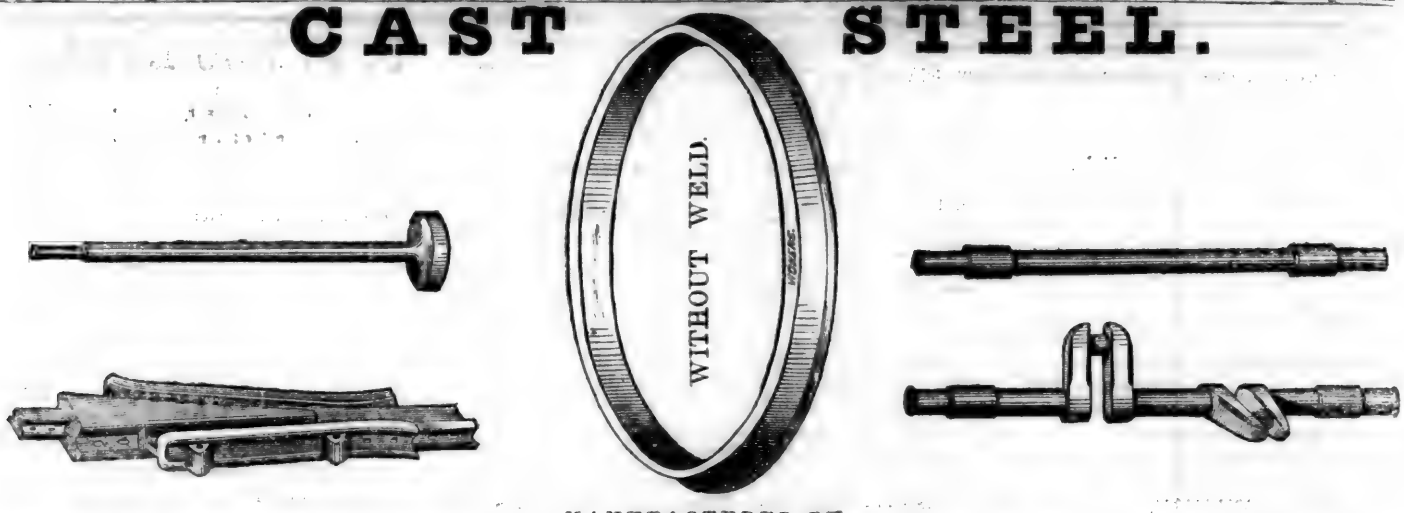
Its Exemption from State or Municipal Taxation.

But aside from all the advantages we have enumerated, a special Act of Congress EXEMPTS ALL BONDS AND TREASURY NOTES FROM LOCAL TAXATION. On the average, this exemption is worth about two per cent per annum, according to the rate of taxation in various parts of the country.

It is believed that no securities offer so great inducements to lenders as those issued by the government. In all other forms of indebtedness, the faith or ability of private parties, or stock companies, or separate communities only, is pledged for payment, while the whole property of the country is held to secure the discharge of all the obligations of the United States.

While the government offers the most liberal terms for its loans, it believes that the very strongest appeal will be to the loyalty and patriotism of the people.

Duplicate certificates will be issued for all deposits. The party depositing must endorse upon the ORIGINAL certificate the denomination of notes required, and whether they are to be issued in blank or payable to order. When so endorsed it must be left with the officer receiving the deposit, to be forwarded to the Treasury Department.



SUBSCRIPTIONS WILL BE RECEIVED by the Treasurer of the United States, at Washington, the several Assistant Treasurers and designated Depositaries, and by all National Banks which are depositaries of public money,

AND ALL RESPECTABLE BANKS AND BANKERS

throughout the country will doubtless

AFFORD FACILITIES TO SUBSCRIBERS.

CAST STEEL.

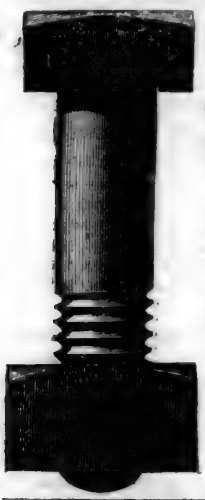
MANUFACTURED BY

NAYLOR, VICKERS & CO., SHEFFIELD, ENGLAND.

CAST STEEL TYRES WITHOUT WELD,

Reversible Crossings and Frogs, Disc Wheels, Pistons and Piston Rods without weld, Crank and Straight

AXLES, AND EVERY DESCRIPTION OF STEEL FOR RAILWAY PURPOSES.

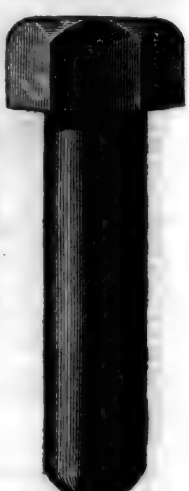


STEEL CROSSINGS have been in use more than three years with very little perceptible wear, in places where the ordinary ones had to be replaced every four months. They have been estimated to be good for ten years in the worst places.

THE "VICKERS" TYRES are in constant and extensive use on almost all the Railways in Great Britain, and also on many roads in other parts of Europe. Their chief advantages are:—1. Their Durability: they will outlast any Iron Tyre without being turned, and for this reason are cheaper than Iron Tyres (free of cost). 2. Their Safety: being without a weld they are not liable to break, and Steel is proved to be a stronger and tougher metal than any other. 3. Their Uniformity: they do not wear in flat places nor "hammate." 4. They are not injuriously affected by frost, and are guaranteed to stand the severest climate.

STEEL AXLES will be found economical, because they may with safety be made much lighter than those of Iron. They will wear longer and "smoother," and will consume much less oil; nor are they liable to granulate from constant use.

For CIRCULARS, GIVING FULL PARTICULARS AND TESTIMONIALS, PRICES, etc., apply to **NAYLOR & CO.,**



421 Commerce street, Philadelphia; 99 John street, New York; 80 State street, Boston.

BOONTON IRON WORKS.

PATENT MACHINE FORGED

BOLTS AND NUTS.

WE are now manufacturing these goods at our Works at BOONTON, N. J.—In the manufacture of the Nuts, the patented device of the "Double Punch," viz, two punches operating from opposite sides towards the centre of the Nut, forces into the body of the Nut most of the Iron which in all other processes is punched out, and also condenses the Iron around the Bolt hole, thus ensuring the greatest strength in the Screw Thread, and making a Nut SUPERIOR TO ANY made by hand or the ordinary machine processes. In size they are made according to the standard approved and adopted by our best Machinists and Engine Builders. The mode of making Bolts is such as to produce an upset solid head, perfectly true on all sides, and of uniform size. The Iron used is of our own manufacture, and we guaranty it of superior quality.

We invite consumers to make trial of them, and will furnish SAMPLES and PRICE LIST on application.

FULLER, LORD & CO.,

137 & 139 GREENWICH ST.,

NEW YORK.

Solid Emery Vulcanite.

WE are now manufacturing wheels of this remarkable substance for cutting, grinding and polishing metals, that will outwear hundreds of the kind commonly used, and will do a much greater amount of work in the same time, and more efficiently. All interested can see them in operation at our warehouse, or circulars describing them will be furnished by mail.

NEW YORK BELTING AND PACKING Co.,
Nos. 37 and 38 Park Row, New York.

MACHINE BELTING,

STEAM PACKING, ENGINE HOSE.

THE superiority of these articles, manufactured of vulcanized rubber, is established. Every belt will be warranted superior to leather, at one-third less price. The Steam Packing is made in every variety, and warranted to stand 300 degs. of heat. The Hose never needs oiling, and is warranted to stand any required pressure; together with all varieties of rubber adapted to mechanical purposes. Directions, prices, etc., can be obtained by mail or otherwise at our warehouse.

NEW YORK BELTING AND PACKING CO.,
JOHN H. CHEEVER, Treasurer,
Nos. 37 and 38 Park Row, New York.

NEW 7 3-10 LOAN AND TEN-FORTY BONDS.

TENTH NATIONAL BANK,

No. 240 Broadway,

Will receive subscriptions for the New 7 3-10 Treasury Notes, which will be dated Aug. 15, with semi-annual coupons, and issued in sums of $50, $100, $500, $1,000 and $5,000. Parties subscribing will be allowed interest to Aug. 15, and the commission allowed by Government of $2 50 on each $1,000. The Ten-Forty 5 per cent. Bonds date from March 1, and 50 per cent. premium for gold interest. Payments must be made in Legal-Tenders or National Bank Notes.

D. L. ROSS, President.
J. H. STOUT, Cashier. 41-31

RENSSELAER POLYTECHNIC INSTITUTE, TROY, N. Y. The FORTY-FIRST ANNUAL SESSION of this well-known SCHOOL OF ENGINEERING AND NATURAL SCIENCE, will commence SEPT. 14th, 1864. The PRINCIPAL BUILDING is completed and ready for occupation. The NEW ANNUAL REGISTER, giving full information, may be obtained at APPLETON'S Bookstore, New York, or from
41-31 Prof. CHARLES DROWNE, Director, Troy, N. Y.

New York, Saturday, September 10, 1864.

The Northern Pacific Railroad.

The narrow statesmanship of the day has been slow to conceive, and still slower to execute the idea of a railway union of our two ocean coasts. When the first legislative concession was made to the popular demand, in 1861, it was done under the stimulus of fears excited by the war, and which anticipated the possibility of foreign contests in which the Isthmian communication with our Pacific States might be in the hands of our enemies; and this wholesome apprehension wrung from Congress the enactment under which the Union Pacific Railroad and its branches have since been commenced. Previous schemes for three simultaneous roads had been entertained; but these were the offspring of sectional jealousy, and advocated oftener by partisan politicians and the agents of Pacific Steamship Companies, with a view of killing the measure, than by real friends actuated by any desire for their construction. When, finally, the single line referred to was authorized, the result was hailed as a miracle of enterprise and foresight. And in fact, when the Union Pacific Railway was chartered and endowed, the index of our National power moved visibly on the dial of destiny.

But war is not an unmixed evil; and one of the fruits of that which unhappily now desolates our land, is a thorough awakening of material, as well as moral perceptions of the principles which should enter into our political economy. We have rapidly reasoned out a wise result from the premises furnished by our vast geographical extent and corresponding resources.

Progress is contagious; and national sagacity, having once secured a precedent, advances by forced marches; so that, within three years from the passage of the first act, another enterprise has been similarly sanctioned, which if less expensive and less richly endowed, is not less stupendous in conception or in absolute magnitude. This is known as the "Northern Pacific Railroad," and is designed to connect the waters of the great lakes directly with those of the Pacific by way of Puget Sound; passing through those new territories which border on British America and opening up a virgin field for the swelling immigration continually flowing in on us from Europe.

The act of Congress authorizing this road, creates a Board of Commissioners to superintend the organization of the company; and this board met in Boston on the first instant, and complied with the preliminary requirements of the law by the selection of its officers. These are JOSIAH PERHAM, President, WILLARD SEARS, Vice President, ABIEL ABBOTT, Secretary, and I. S. WITHINGTON, Treasurer. These gentlemen are all residents of Boston and vicinity; and it will be seen from the selection that the enterprise is likely to become what it was designed and should be—a means of developing the resources and stimulating the industry of the northern portion of the Republic. A resolution was also passed, instructing the officers to open books within ninety days in the cities of Boston, Massachusetts, and Portland, Maine, for subscriptions to the capital stock.

The capital stock is fixed by law at one hundred millions of dollars. When two millions shall have been subscribed, and ten per cent. of the amount paid in, it will become the duty of the Commissioners to call a meeting of the shareholders for the purpose of electing a board of thirteen Directors, for a permanent organization; and this done, the functions of the Commissioners will cease and their board be dissolved.

The endowment of the Northern Pacific Railroad is altogether in lands; but these are liberal in quantity, and in quality equal to any west of the great lakes. It is generally supposed that the lands owned by our Government in the higher latitudes, are comparatively valueless, owing to the severity of the climate; but the error of this opinion is proven by abundant corroborative testimony, including meteorological statistics, reports of explorers, both official and voluntary, and the fact that animal and vegetable life in those regions are sustained in a vigor and profusion utterly incompatible with any serious defect in climate or soil. It is unquestionable that the isothermal lines in that latitude, are deflected rapidly northward, as they extend west from the lakes; and the valley of the Red River of the North, crossing the National boundary, is as mild in its winter temperature as the more favored portions of Wisconsin and Michigan. The rich growth of forests and grass in that part of the continent, and the immense herds of buffalo which subsist there, prove sufficiently the fertility of the soil; and the history of the British settlements for a quarter of a century, shows that the climate interposes no obstacle to health, comfort, or the accumulation of wealth.

The construction of the Northern Pacific Railroad will add greatly to our national prosperity by filling our now waste and vacant territories with a productive population. Practically, it will give to the nation as many new and rich provinces as we now possess in that quarter, Territorial organizations. Besides this, it will develop a most important mineral interest in the same chain of mountains which has yielded to the hand of enterprise such vast wealth of gold and silver and iron in California and Arizona and Colorado. And when the line shall have been completed to Puget Sound, we shall have opened up a source of future trade, now absolutely inconceivable to those who are unaware of the great commercial facilities of the North Pacific coast, with its fisheries, its forests, and its proximity to Japan, China and the Asiatic provinces of the Russian empire. Realizing all this, and knowing the anxiety of our

British neighbors to forestall us in the advantages to be derived from a road across the continent in this latitude, we can but hope that the subject will engage the immediate attention of our capitalists; and that the Commissioners may soon be able to announce the subscription of the two millions of dollars necessary to secure the organization of the company and inaugurate the work of construction.

Lake Superior Mines.

The following statement will show the aggregate cost of stock, cost per share, present value per share, and total value of the six leading mines worked in the Portage District, they being the only ones that have been carried forward so as to approach a state of complete development. The number of shares in each company is 20,000:

	Aggregate cost of Stock.	Cost per Share.	Present value per Share.	Total value of Mine.	Div'ds.
Quincy	$160,000	$8 00	$105	$1,900,000	$540,000
Pewabic	120,000	6 00	65	1,200,000	340,000
Franklin	80,000	4 00	55	1,000,000	160,000
Isle Royale	260,000	15 50	20	600,000	
Huron	240,000	12 00	33	800,000	
Grand Portage	50,000	2 50	40	880,000	

The above shows dividends amounting to $1,040,000, or about 300 per cent. on the total cost to the stockholders.

☞ A connecting link has just been completed at Sharon, Pa., between the Erie and Pittsburg Railroad and Coleman, Westerman & Co.'s track, which meets the Hubbard Branch of the Mahoning Railroad at the State line. It is expected that an arrangement will soon be made by which regular freight and passenger cars will be put upon the road. This will afford Youngstown a direct railroad communication with Pittsburg, and be a very desirable route for travel, and transportation of pig iron and other products between the two points.

Bellefontaine Railroad Line.

This line is 206 miles in length. It is composed of the *Bellefontaine and Indiana Railroad*, extending from Indianapolis to Union 84 miles; and the *Indianapolis, Pittsburg and Cleveland Railroad*, thence to Crestline, 122 miles. We have been favored with a copy of the Eighth Joint Annual Report of the directors of these companies—being the Fourteenth Annual Report af the former, and the Fifteenth of the latter. The following is a statement of the transactions of these roads during the fiscal year ending December 31, 1863:

BELLEFONTAINE AND INDIANA RAILROAD.

Earnings from passengers	$203,782 10

With an increase in expenses of		74,859 18
Making the increase in net earnings		$127,212 67

The capital stock has been increased in the sum of $189,178 52. This was used in the payment of this Company's proportion of the indorsement of the third mortgage bonds of the Columbus, Piqua and Indiana Railroad Company; the stock was used at par, and that indebtedness of this Company is now extinguished. For the purpose of extending the first mortgage bonds, which mature in 1866, the Directors, at a meeting in July, adopted the following

RESOLUTIONS:

Resolved, That the President and Secretary of the Bellefontaine and Indiana Railroad Company be, and they are hereby authorized, empowered and directed to prepare and execute a mortgage upon all the road, and property and franchises of said Company to Amasa Stone Jr., Trustee, in order to secure the payment (at their respective dates of maturity), of the following bonds, and interest thereon, to-wit:

Maturing on the first day of January of each year from 1870 to 1876, both inclusive, ten thousand dollars in each of said years, being an aggregate of eighty thousand dollars.

Maturing on the first day of January of each year from 1877 to 1880, both inclusive, twenty thousand dollars in each of said years, making an aggregate of eighty thousand dollars.

Maturing on the first day of January of each year from 1881 to 1886, both inclusive, thirty thousand dollars in each of said years, making an aggregate of one hundred and eighty thousand dollars.

Maturing on the first day of January of each year from 1887 to 1898, both inclusive, thirty-five thousand dollars in each of said years, making an aggregate of four hundred and twenty thousand dollars.

Maturing on the first day of January 1899, the sum of forty-one thousand dollars.

The whole of said bonds, amounting to the aggregate sum of seven hundred and ninety-one thousand dollars, being the amount of the present first mortgage bonds of said Company outstanding, and maturing on the first day of July, 1866.

Resolved, That warrants or coupons be attached to each of such bonds, for payment of interest, at the rate of seven per cent. per annum, semi-annually, on the first days of January and July in each year, in the city of New York.

Resolved, That said new issue of bonds be placed in the hands of said Trustee to be used by exchange or negotiation, in taking up or retiring the first mortgage bonds of the Company, and for no other use or purpose whatsoever; provided that none of said bonds shall be negotiated or sold until after six months' notice, by publication in two newspapers of general circulation in the city of New York, to holders of the present first mortgage bonds, and allowing them the prior right, within said time, to exchange their bonds for the new issue above provided for; such exchange to be made by lot, or the drawing of numbers representing the numbers of the new bonds.

Resolved, That as there are one hundred and sixty-four thousand dollars of the second mortgage bonds of said Company now outstanding, and maturing on the first day of April, 1870, the mortgage hereby authorized shall contain a stipulation on behalf of said Company, that there shall be paid to the Trustee thereof, from the earnings of said road, in each of the years 1864, 1865, 1866, 1867, 1868 and 1869, the sum of twenty-seven thousand and five hundred dollars, either in money or said second mortgage bonds. If said payments be made in money, the said Trustee shall at once invest the same in said second mortgage bonds, at, or below par, if he is able so to do; but if said bonds cannot be so purchased, he shall invest the money in such other safe and saleable security, as may be approved by the Executive Committe of said company collecting and funding the interest thereto until the maturity of said second mortgage bonds, when he shall redeem the same from the proceeds thereof.

Resolved, That the same mortgage shall also provide that in the event of the failure of said Company to make any payment of said sinking fund for said second mortgage bonds, the Trustee shall have the same power to enter upon and proceed against said Company as is provided and given him by said mortgage for non-payment of any interest or principal of said new issue of bonds.

Resolved, That said Trustee shall be empowered, by the terms of said mortgage, to hold all of said first mortgage bonds which shall have been exchanged for new bonds, uncancelled, in trust for, and as a matter of security to the prior holders thereof, until the whole of said issue of second mortgage bonds, or within five thousand dollars thereof, shall have been redeemed; when it shall be his duty to cancel the same; and in the event of the failure of the railroad company to meet any of its stipulated payments of sinking fund or interest, and the full retirement of its second mortgage bonds, and the cancelation of the mortgage of said second mortgage bonds, he may re-exchange with prior holders of said bonds, in order to place them in their original position, if they shall so desire.

Resolved, That Dan P. Eells be named in the mortgage as alternate Trustee.

In accordance with these resolutions a mortgage has been executed, and the bonds prepared and deposited with the Trustee.

In December it was resolved to change the security for the second mortgage bonds, from a yearly sinking fund, into a deposit of Government 5-20 bonds, in the hands of the Trustee, equal to the amount of said second mortgage bonds outstand on the 1st day of January, 1864. Accordingly, a deposit of Government securities was made with Mr. Stone on the 2d day of January, from which he will purchase the outstanding bonds, or redeem them at maturity. In so doing, the Directors contracted a temporary loan of $50,000, which will be paid out of the surplus earnings of the year as they are realized.

Of the income bonds, $87,000 is outstanding, maturing in 1870. The remainder has been redeemed and cancelled.

Of the real estate bonds, the amount outstanding is $50,000. Of this amount $1,000 was due in 1858, and $1,000 in 1863, which have not been presented for redemption; the balance mature in 1866. The amount redeemed in 1863 is $23,000 from funds derived from real estate.

The reduction of the funded debt during the year, amounts to $82,000; giving an annual reduction of interest of $5,740.

		213,647 07
Surplus		$65,687 38
Surplus previous year		78,379 38
Total		$144,016 76

This surplus has all been specifically appropriated to outstanding contracts for cars and engines, and the completion of the new buildings and works at Indianapolis.

Compared with the previous year, the gross earnings show an increase of $148,013 42
With an increase in expenses of 44,826 54

Making the increase in net earnings $103,186 88

The capital stock has been increased $464,028 74. Of this sum, $164,048 74 was used at par in paying the company's indorsement on the C., P. & I. bonds; the balance to cover expenditures in equipment, and payment of floating debt prior to July, 1862.

President.—JOHN BROUGH.

Directors.—John Brough, Stillman Witt, Henry Wick, T. P. Handy, W. A. Otis, Simon Yandes, Edward King, Wm. Collins, J. M. Townsend, E. J. Peck, M. G. Walker, Allen Makepeace, D. Kilgore, S. P. Anthony L. M. Hubby.

Vice President.—E. J. PECK.

Secretary and Treasurer.—ED. KING.

Gen. Superintendent—J. W. WEBB.

Central Pacific Railroad.

The Central Pacific Railroad of California is now completed and in successful operation to Newcastle, near Auburn, 31 miles from Sacramento. Nearly 300 men are at work on the track beyond Newcastle. The work on Bloomer's Divide, a cut 60 feet deep, will soon be completed with the force now engaged in carrying it forward. All the culverts required on the next twelve miles of the road are being rapidly completed in a substantial manner. This addition of twelve miles, which will extend to Clipper Gap, it is designed to complete by January next, the iron and ties for that portion having already been received. As soon as the Government accepts the thirty-one miles of road now finished, the directors of the company can issue and control the United States bonds and State bonds provided for by Congressional and legislative enactment, which, with other facilities within their control, will place at their disposal at the market rates of those bonds over $1,000,000 in coin, exclusive of the $400,000 now overdue from San Francisco, and exclusive of public lands. Governor Low, P. H. Sibley and Josiah Johnson have been appointed by President Lincoln as Commissioners to examine and report upon the road now finished, and there is therefore every reason to believe the road will be accepted by the Government at an early day. The telegraph line which the company is required to put up is in a forward state of construction between Sacramento and Newcastle.

Beloit and Madison Road.

The laying of the track on the branch of the Northwestern road, formerly known as the Beloit and Madison Railroad, was completed yesterday, and regular trains will be running in course of a few days.

This gives Madison, at last, a direct railroad communication with Chicago.—*Madison Journal.*

Northern Pacific Railroad Act.

AN ACT granting lands to aid in the construction of a railroad and telegraph line from Lake Superior to Puget's Sound, on the Pacific coast, by the northern route.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Richard D. Rice, John A. Poor, Samuel P. Strickland, Samuel C. Fessenden, Charles P. Kimball, Augustine Haines, Edwin R. W. Wiggin, Anson P. Morrill, Samuel J. Anderson, of Maine; Willard Sears, I. S. Withington, Josiah Perham, James M. Becket, A. W. Banfield, Abiel Abbot, John Newell, Austin L. Rogers, Nathaniel Greene, jr., Olivee Frost, John A. Bass, John O. Presbrey, George Shiverick, Edward Tyler, Filander J. Forristall, Ivory H. Pope, of Massachusetts; George Opdyke, Fairley Holmes, John Huggins, Philander Read, George Briggs, Chauncey Vibbard, John C. Fremont, of New York; Ephraim Marsh, John P. Jackson, jr., of New Jersey; S. M. Felton, John Foy, O. J Dickey, B. F. Archer, G. W. Cass, J. Edgar Thomson, John A. Green of Pennsylvania; T. M. Allyn, Moses W. Wilson, Horace Whittaker, Ira Bliss, of Connecticut; Joseph A. Gilmore, Onslow Stearns, E. P. Emerson, Frederick Smyth, William E. Chandler, of New Hampshire; Cyrus Aldrich, H. M. Rice, John McKusick, H. C. Waite, Stephen Miller, of Minnesota; E. A. Chapin, John Gregory Smith, George Merrill, of Vermont; James Y. Smith, William S. Slater, Isaac H. Southwick, Earl P. Mason, of Rhode Island; Seth Fuller, William Kellogg, U. S. Grant, William B. Ogden, William G. Greene, Leonard Sweat, Henry W. Blodgett, Porter Sheldon, of Illinois; J. M. Winchell, Ellsworth Cheesebrough, James S. Emery; of Kansas; Richard F. Perkins, Richard Chenery, Samuel Brannan, George Rowland, Henry Platt, of California; William F. Mercer, James W. Brownley, of Virginia; John H. B. Latrobe, W. Prescott Smith, of Maryland; Greenbury Slack, A. J. Boreman, of West Virginia; Thomas E. Bramlette, Frank Shorin, of Kentucky; John Brough, John A. Bingham, Orsan Follet, John Gardner, S. S. L'Hommedien, Harrison G. Blake, Philo Chamberlain, of Ohio; John A. Duncan, Samuel M. Harrington, of Delaware; Thomas A. Morris, Jesse L. Williams, of Indiana; Samuel L. Case Henry L. Hall, David H. Jerome, Thomas D. Gilbert, C. A. Trowbridge, of Michigan; Edward H. Brodhead, Alexander Mitchell, Benjamin Ferguson, Levi Sterling.——Marshall, of Wisconsin; J. C. Ainsworth, Orlando Humason, H. W. Corbett, Henry Failing, of Oregon; J. B. S. Todd, M. K. Armstrong, J. Shaw Gregory, J. Le Berge, of Dakota Territory; John Mullan, Anson G. Henry, S. D. Smith, Charles Terry, of Washington Territory; H. W. Starr, Platt Smith, Nixon Dentor, William Leighton, B. F. Allen, Reuben Noble, John L. Davies, of Iowa; Willard P. Hall, George R. Smith, H. Gayle King, John C. Sargent, of Missouri; William H. Wallace, of Idaho Territory; J. H. Lathrop, Henry D. Cooke, H. E. Merrick, of the District of Columbia, and all such other persons who shall or may be associated with them, and their successors, are hereby created and erected into a body corporate and politic, in deed and in law, by the name, style, and title of the "Northern

Pacific Railroad Company," and by that name shall have perpetual succession, and shall be able to sue and be sued, plead and be impleaded, defend and be defended, in all courts of law and equity within the United States, and may make and have a common seal. And said corporation is hereby authorized and empowered to lay out, locate, construct, furnish, maintain, and enjoy a continuous railroad and telegraph line, with the appurtenances, namely, beginning at a point on Lake Superior, in the States of Minnesota or Wisconsin; thence westerly by the most eligible railroad route, as shall be determined by said company, within the territory of the United States, on a line north of the forty-fifth degree of latitude to some point on Puget's Sound, with a branch, *via* the valley of the Columbia river, to a point at or near Portland, in the State of Oregon, leaving the main trunk line at the most suitable place, not more than three hundred miles from its western terminus; and is hereby vested with all the powers, privileges, and immunities necessary to carry into effect the purposes of this act as herein set forth. The capital stock of said company shall consist of one million shares of one hundred dollars each, which shall in all respects be deemed personal property, and shall be transferable in such manner as the by laws of said corporation shall provide. The persons hereinbefore named are hereby appointed commissioners, and shall be called the board of commissioners of the "Northern Pacific Railroad Company," and fifteen shall constitute a quorum for the transaction of business. The first meeting of said board of commissioners shall be held at the Melodeon Hall, in the city of Boston, at such time as any five commissioners herein named from Massachusetts shall appoint, not more than three months after the passage of this act, notice of which shall be given by them to the other commissioners by publishing said notice in at least one daily newspaper in the cities of Boston, New York, Philadelphia, Cincinnati, Milwaukee, and Chicago, once a week at least four weeks previous to the day of meeting. Said board shall organize by the choice from its number of a president, vice-president, secretary, and treasurer, and they shall require from said treasurer such bonds as may be deemed proper, and may from time to time increase the amount thereof as they may deem proper. The secretary shall be sworn to the faithful performance of his duties, and such oath shall be entered upon the records of the company, signed by him, and the oath verified thereon. The president and secretary of said board shall in like manner call all other meetings, naming the time and place thereof. It shall be the duty of said board of commissioners to open books or cause books to be opened at such times and in such principal cities or other places in the United States as they or a quorum of them shall determine, within six months after the passage of this act, to receive subscriptions to the capital stock of said corporation, and a cash payment of ten per centum on all subscriptions, and to receipt therefor. So soon as twenty thousand shares shall in good faith be subscribed for, and ten dollars per share actually paid into the treasury of the company, the said president and secretary of said board of commissioners shall appoint a time and place for the first meeting of the subscribers to the stock of said company, and shall give notice thereof in at least one newspaper in each State in which subscription books have been opened, at least fifteen days previous to the day of meeting, and such subscribers as shall attend the meeting so called, either in person or by lawful proxy, then and there shall elect by ballot thirteen directors for said corporation; and in such election each share of said capital stock shall entitle the owner thereof to one vote. The president and secretary of the board of commissioners, and in case of their absence or inability, any two of the officers of said board, shall act as inspectors of said election, and shall certify under their hands the names of the directors elected at said meeting; and the said commissioners, treasurer, and secretary, shall then deliver over to said directors all the properties, subscription books, and other books in their possession, and thereupon the duties of said commissioners and the officers previously appointed by them shall cease and determine forever, and thereafter the stockholders shall constitute said body politic and corporate. Annual meetings of the stockholders of the said corporation for the choice of officers (when they are to be chosen) and for the transaction of business shall be holden at such time and place and upon such notice as may be prescribed in the by-laws.

SEC. 2. *And be it further enacted*, That the right of way through the public lands be, and the same is hereby, granted to said Northern Pacific Railroad Company, its successors and assigns, for the construction of a railroad and telegraph as proposed; and the right, power and authority is hereby given to said corporation to take from the public lands, adjacent to the line of said road, material of earth, stone, timber, and so forth, for the construction thereof. Said way is granted to said railroad to the extent of two hundred feet in width on each side of said railroad where it may pass through the public domain, including all necessary grounds for station buildings, workshops, depots, machine shops, switches, side tracks, turn-tables, and water stations; and the right of way shall be exempt from taxation within the Territories of the United States. The United States shall extinguish, as rapidly as may be consistent with public policy and the welfare of the said Indians, the Indian titles to all lands falling under the operation of this act, and acquired in the donation to the [road] named in this bill.

SEC. 3. *And be it further enacted*, That there be, and hereby is, granted to the Northern Pacific Railroad Company, its successors and assigns, for the purpose of aiding in the construction of said railroad and telegraph line to the Pacific coast, and to secure the safe and speedy transportation of the mails, troops, munitions of war, and public stores, over the route of said line of railway, every alternate section of public land, not mineral, designated by add numbers, to the amount of twenty alternate sections per mile, on each side of said railroad line, as said company may adopt, through the Territories of the United States, and ten alternate sections of land per mile on each side of said railroad whenever it passes through any State, and whenever, on the line thereof, the United States have full title, not reserved, sold, granted, or otherwise appropriated, and free from pre-emption, or other claims or rights, at the time the line of said road is definitely fixed, and a plat thereof filed in the office of the Commissioner of the General Land Office; and whenever, prior to said time, any of said sections or parts of sections shall have been granted, sold, reserved, occupied by homestead settlers, or pre-empted, or otherwise disposed of, other lands shall be selected by said company in lieu thereof, under the direction of the Secretary of the Interior, in alternate sections, and designated by odd numbers, not more than ten miles beyond the limits of said alternate sections: *Provided*, That if said route shall be found upon the line of any other railroad route to aid in the construction of which lands have been heretofore granted by the United States, as far as the routes are upon the same general line, the amount of land heretofore granted shall be deducted from the amount granted by this act: *Provided further*, That the railroad company receiving the previous grant of land may assign their interest to said Northern Pacific Railroad Company, or may consolidate, confederate, and associate with said company upon the terms named in the first section of this act: *Provided further*, That all mineral lands be, and the same are hereby, excluded from the operations of this act, and in lieu thereof a like quantity of unoccupied and unappropriated agricultural lands, in odd numbered sections, nearest to the line of said road and within fifty miles thereof, may be selected as above provided: *And provided further*, That the word "mineral" when it occurs in this act shall not be held to include iron or coal: *And provided further*, That no money shall be drawn from the treasury of the United States to aid in the construction of the said Northern Pacific railroad.

SEC. 4. *And be it further enacted*, That whenever said Northern Pacific Railroad Company shall have twenty-five consective miles of any portion of said railroad and telegraph line ready for the service contemplated, the President of the United States shall appoint three commissioners to examine the same, and if it shall appear that twenty-five consecutive miles of said road and telegraph line have been completed in a good, substantial, and workmanlike manner, as in all other respects required by this act, the commissioners shall so report to the President of the United States, and patents of lands, as aforesaid, shall be issued to said company, confirming to said company the right and title to said lands, situated opposite to and coterminous with said completed section of said road; and, from time to time, whenever twenty-five additional consecutive miles shall have been constructed, completed, and in readiness, as aforesaid, and verified by said commissioners to the President of the United States, then patents shall be issued to said company conveying the additional sections of land as aforesaid, and so on as fast as every twenty-five miles of said road is completed as aforesaid: *Provided*, That not more than ten sections of land per mile, as said road shall be completed, shall be conveyed to said company for all that part of said railroad lying east of the western boundary of the State of Minnesota, until the whole of said railroad shall be finished and in good running order, as a first-class railroad, from the place of beginning on Lake Superior to the western boundary of Minnesota: *Provided also*, That lands shall not be granted under the provisions of this act on account of any railroad, or part thereof, constructed at the date of the passage of this act.

SEC. 5. *And be it further enacted*, That said Northern Pacific railroad shall be constructed in a substantial and workmanlike manner, with all the necessary draws, culverts, bridges, viaducts, crossings, turnouts, stations, and watering places, and all other appurtenances, including furniture, and rolling stock, equal in all respects to railroads of the first class, when prepared for business, with rails of the best quality, manufactured from American iron. And a uniform gauge shall be established throughout the entire length of the road. And there shall be constructed a telegraph line, of the most substantial and approved description, to be operated along the entire line: *Provided*, That the said company shall not charge the government higher rates than they do individuals for like transportation and telegraphic service. And it shall be the duty of the Northern Pacific Railroad Company to permit any other railroad which shall be authorized to be built by the United States or by the legislature of any Territory or State in which the same may be situated, to form running connections with it, on fair and equitable terms.

SEC. 6. *And be it further enacted*, That the President of the United States shall cause the lands to be surveyed for forty miles in width on both sides of the entire line of said road, after the general route shall be fixed, and as fast as may be required by the construction of said railroad; and the odd sections of land hereby granted shall not be liable to sale, or entry, or pre-emption before or after they are surveyed except by said company, as provided in this act; but the provisions of the act of September, eighteen-hundred and forty-one, granting pre-emption rights, and the acts amendatory thereof, and of the act entiled "An act to secure homesteads to actual settlers on the public domain," approved May twenty, eighteen hundred and sixty-two, shall be, and the same are hereby, extended to all other lands on the line of said road, when surveyed, excepting those hereby granted to said company. And the reserved alternate sections shall not be sold by the government at a price less than two dollars and fifty cents per acre, when offered for sale.

SEC. 7. *And be it further enacted*, That the said Northern Pacific Railroad Company be, and is hereby, authorized and empowered to enter upon, purchase, take, and hold any lands or premises

that may be necessary and proper for the construction and working of said road, not exceeding in width two hundred feet on each side of the line of its railroad, unless a greater width be required for the purpose of excavation or embankment; and also any lands or premises that may be necessary and proper turnouts, standing places for cars, depots, station-houses, or any other structures required in the construction and working of said road. And the said company shall have the right to cut and remove trees and other material that might, by falling, encumber its road-bed, though standing, or being more than two hundred feet from the line of said road. And in case the owner of such lands or premises and the said company can not agree as to the value of the premises taken, or to be taken, for the use of said road, the value thereof shall be determined by the appraisal of three disinterested commissioners, who may be appointed, upon application by either party, to any court of record in any of the Territories in which the lands or premises to be taken lie; and said commissioners, in their assessment of damages, shall appraise such premises at what would have been the value thereof if the road had not been built. And upon return into court of such appraisement, and upon the payment into the same of the estimated value of the premises taken for the use and benefit of the owner thereof, said premises shall be deemed to be taken by said company, which shall thereby acquire full title to the same for the purposes aforesaid. And either party feeling aggrieved at said appraisement may, within thirty days after the same has been returned into court, file an appeal therefrom, and demand a jury of twelve men to estimate the damage sustained; but such appeal shall not interfere with the rights of said company to enter upon the premises taken, or to do any act necessary and proper in the construction of its road. And said party appealing shall give bonds, with sufficient surety or sureties, for the payment of any cost that may arise upon such appeal; and in case the party appealing does not obtain a verdict, increasing or diminishing, as the case may be, the award of the commissioners, such party shall pay the whole cost incurred by the appellee, as well as his own, and the payment into court, for the use of the owner of said premises taken, of a sum equal to that finally awarded, shall be held to vest in said company the title of said land, and of the right to use and occupy the same for the construction, maintenance, and operation of said road. And in case any of the lands to be taken, as aforesaid, shall be held by any infant, femme covert, non compos, insane person or persons residing without the territory within which the lands to be taken lie, or persons subjected to any legal disability, the court may appoint a guardian for any party under any disqualification, to appear in proper person, who shall give bonds, with sufficient surety or sureties, for the proper and faithful execution of his trust, and who may represent in court the person disqualified, as aforesaid, from appearing, when the same proceedings shall be had in reference to the appraisement of the premises to be taken for the use of said company, and with the same effect as has been already described; and the title of the company to the lands taken by virtue of this act shall not be affected or impaired by reason of any failure by any guardian to discharge faithfully his trust. And in case any party shall have a right or claim to any land for a term of years, or any interest therein, in possession, reversion, or remainder, the value of any such estate, less than a fee simple, shall be estimated and determined in the manner hereinbefore set forth. And in case it shall be necessary for the company to enter upon any lands which are unoccupied, and of which there is no apparent owner or claimant, it may proceed to take and use the same for the purposes of said railroad, and may institute proceedings, in the manner described, for the purpose of ascertaining the value of and of acquiring a title to the same; but the judge of the court hearing said suit shall determine the kind of notice to be served on such owner or owners, he may in its discretion appoint an agent or guardian to represent such owner or owners in case of his or their incapacity or non-appearance. But in case no claimant shall appear within six years from the time of the opening of said road across any land, all claims to damages against said company shall be barred.

SEC. 8. *And be it further enacted*, That each and every grant, right, and privilege herein are so made and given to, and accepted by, said Northern Pacific Railroad Company, upon and subject to the following conditions, namely: That the said company shall commence the work on said road within two years from the approval of this act by the President, and shall complete not less than fifty miles per year after the second year, and shall construct, equip, furnish, and complete the whole road by the fourth of July, anno Domini eighteen hundred and seventy-six.

SEC. 9. *And be it further enacted*, That the United States make the several conditional grants herein, and that the said Northern Pacific Railroad Company accept the same, upon the further condition that if the said company make any breach of the conditions hereof, and allow the same to continue for upwards of one year, then, in such case, at any time hereafter, the United States, by its Congress, may do any and all acts and things which may be needful and necessary to insure a speedy completion on the said road.

SEC. 10. *And be it further enacted*, That all people of the United States shall have the right to subscribe to the stock of the Northern Pacific Railroad Company until the whole capital named in this act of incorporation is taken up, by complying with the terms of subscription; and no mortgage or construction bonds shall ever be issued by said company on said road, or mortgage, or lien made in any way, except by the consent of the Congress of the United States.

SEC. 11. *And be it further enacted*, That said Northern Pacific Railroad, or any part thereof, shall be a post route and a military road, subject to the use of the United States, for postal, military, naval, and all other government service, and also subject to such regulations as Congress may impose restricting the charges for such government transportation.

SEC. 12. *And be it further enacted*, That the acceptance of the terms, conditions, and impositions of this act by the said Northern Pacific Railroad Company shall be signified in writing under the corporate seal of said company, duly executed pursuant to the direction of its board of directors first had and obtained, which acceptance shall be made within two years after the passage of this act, and not afterwards, and shall be served on the President of the United States.

SEC. 13. *And be it further enacted*, That the directors of said company shall make an annual report of their proceedings and expenditures, verified by the affidavits of the president and at least six of the directors, and they shall from time to time, fix, determine, and regulate the fares, tolls, and charges to be received and paid for transportation of persons and property on said road, or any part thereof.

SEC. 14. *And be it further enacted*, That the directors chosen in pursuance of the first section of this act shall, so soon as may be after their election, elect from their own number a president and vice-president; and said board of directors shall, from time to time, and so soon as may be after their election, choose a treasurer and secretary, who shall hold their offices at the will and pleasure of the board of directors. The treasurer and secretary shall give such bonds, with such security as the said board from time to time may require. The secretary shall, before entering upon his duty, be sworn to be faithful discharge thereof, and said oath shall be made a matter of record upon the books of said corporation. No person shall be a director of said company unless he shall be a stockholder, and qualified to vote for directors at the election at which he shall be chosen.

SEC. 15. *And be it further enacted*, That the president, vice-president, and directors shall hold their offices for the period indicated in the by-laws of said company, not exceeding three years, respectively, and until others are chosen in their place, and qualified. In case it shall so happen that an election of directors shall not be made on any day appointed by the by-laws of said company, the corporation shall not for that excuse be deemed to be dissolved, but such election may be holden on any day which shall be appointed by the directors. The directors, of whom seven, including the president, shall be a quorum for the transaction of business, shall have full power to make and prescribe such by-laws, rules and regulations as they shall deem needful and proper touching the disposition and management of the stock, property, estate, and effects of the company, the transfer of shares, the duties and conduct of their officers and servants touching the election and meeting of the directors, and all matters whatsoever which may appertain to the concerns of said company; and the said board of directors may have full power to fill any vacancy or vacancies that may occur from any cause or causes from time to time in their said board. And the said board of directors shall have the power to appoint such engineers, agents, and subordinates as may from time to time be necessary to carry into effect the object of the company, and to do all acts and things touching the location and construction of said road.

SEC. 16. *And be it further enacted*, That it shall be lawful for the directors of said company to require payment of the sum of ten per centum cash assessment upon all subscriptions received of all subscribers, and the balance thereof at such times and in such proportions and on such conditions as they shall deem to be necessary to complete the said road and telegraph line within the time in this act prescribed. Sixty days' previous notice shall be given of the payments required, and of the time and place of payment, by publishing a notice once a week in one daily newspaper in each of the cities of Boston, New York, Philadelphia, and Chicago; and in case any stockholder shall neglect or refuse to pay, in pursuance of such notice, the stock held by such person shall be forfeited absolutely to the use of the company, and also any payment or payments that shall have been made on account thereof, subject to the condition that the board of directors may allow the redemption on such terms as they may prescribe.

SEC. 17. *And be it further enacted*, That the said company is authorized to accept to its own use any grant, donation, loan, power, franchise, aid, or assistance which may be granted to or conferred upon said company by the Congress of the United States, by the legislature of any State, or by any corporation, person, or persons; and said corporation is authorized to hold and enjoy any such grant, donation, loan, power, franchise, aid, or assistance, to its own use for the purpose aforesaid.

SEC. 18. *And be it further enacted*, That said Northern Pacific Railroad Company shall obtain the consent of the legislature of any State through which any portion of said railroad line may pass, previous to commencing the construction thereof; but said company may have the right to put on engineers and survey the route before obtaining the consent of the legislature.

SEC. 19. *And be it further enacted*, That unless said Northern Pacific Railroad Company shall obtain bona fide subscriptions to the stock of said company to the amount of two millions of dollars, with ten per centum paid within two years after the passage and approval of this act, it shall be null and void.

SEC. 20. *And be it further enacted*, That the better to accomplish the object of this act, namely, to promote the public interest and welfare by the construction of said railroad and telegraph line, and keeping the same in working order, and to secure to the government at all times (but particularly in time of war) the use and benefits of the same for postal, military, and other purposes, Congress may, at any time, having due regard for the rights of said Northern Pacific Railroad Company, add to, alter, amend, or repeal this act.

APPROVED, July 2, 1864.

American Railroad Journal.

Saturday, September 10, 1864.

Stock Exchange and Money Market.

We have on our table the eighth report of the Commissioners of British Customs, which gives some interesting particulars of the progress of the commerce of the United Kingdom for the last ten years. The total value of the imports and exports for the year 1863 was £454,955,715, being an increase from 1862 of £63,070,605. This state of things gives intense satisfaction to the Commissioners, and doubtless to British merchants and to the Government. Yet it is to be noted that the balance of trade continues heavily against the country, as appears from the following statement from the same report, viz:

Imports of all descriptions 1863	£248,980,942	
Exp'ts of British origin	£146,489,768	
" foreign mdze.	49,485,005	
		195,974,773
		£53,006,169

In other words, the balance of trade against Great Britain in 1863 was $265,030,845!! We would ask of those persons who are continually grieving over the apparent balance of trade which exists against our own country, what they think of the above statement; why it is that a balance of trade against the former country is less prejudicial to it than it is to us, and whether there is any balance of trade at all when commerce is continually going on, from day to day, without regard to any almanacs, or fiscal years, or treasury budgets. Whether, in fact, it may not be, as some political economists maintain, that what is called the balance of trade, the difference between exports and imports, apparently against a country may after all be its profits. For if it sends away one hundred millions and gets back what is worth two hundred, it clearly makes a profit of one hundred. This appears a plausible conclusion, since England is growing richer every year, and the balance of trade against her is constantly increasing.

At all events we may console ourselves with the reflection, that if that country can grow rich under such circumstances, it is quite possible that we also may. And certain it is that our trade, our industry, our resources and our wealth have also been prodigiously increased, with the same continued balances of trade against us from year to year. It will be well for us therefore to pause before we are alarmed by any predictions of those economists, who consider only figures by themselves, and overlook the facts they represent, as well as those who keep the books.

As regards the particular trade between Great Britain and the United States for the last year 1863, the Commissioners report substantially that

"The trade of the country with the United States has, of course, gone through the most extraordinary fluctuations during the last four years, owing to the suspension of the cotton trade in the South and the demand for all kinds of munitions of war and army clothing in the North. The fluctuations in the value of the British and Irish produce and manufactures exported to the United States of America in the years 1860, 1861, 1862, and 1863, will be seen from the following table:

EXPORTS TO THE UNITED STATES IN THE LAST FOUR YEARS.

1860	£21,667,065
1861	9,064,504
1862	14,327,870
1863	15,351,626

"It will be seen from these figures that, though there was an increase in the value of the exports to the United States of £1,023,756 in 1863 as compared with 1862, there was still a decrease, in comparison with 1860, of £6,315,439. To a certain extent, however, this is compensated by the increase of British goods sent through the Bahamas and the West Indies into the Southern States.

"The imports into the United Kingdom from the United States *are still very large*, especially if we allow for the import of gold and of cotton from the Bahamas, the West Indies, and Mexico, from all of which we have received considerable quantities of cotton grown in the Southern States. Still there is a very serious decrease in the value of the imports in 1863 as compared with 1862; the value of the imports in 1862 having been £27,715,118, whilst in 1863 it was not more than £19,570,815. To this is to be added the import of bullion from the United States, amounting in 1863 to £8,147,524. and the value of the American cotton imported through the Bahamas, Mexico, &c. The value of the American cotton imported through the Bahamas rose from a mere nothing before the war to £2,194,385 in the year 1862."

Our own exports have been rapidly increasing for the last three months. They are in fact three times as large as they were during the same period in 1863. At the same time the amount of imports is falling off somewhat in the same ratio, so that beyond all question a safer condition is being reached, in respect to the demand for gold; and we may continue to look for a further decline.

The fall in this commodity, for such it is at present, and nothing else, has been very great. It has been down within two weeks to 131–2, and will undoubtedly be there again. We are more than paying for our imports by our exports; the demand for duties has lessened with the imports, and what is to keep up the price we are unable to imagine.

The reason why specie has risen so much here has been owing to the demand for it to pay duties, and this explains why it has been higher with us than it was in England when that country was driven to the exclusive use of a paper currency. We are indebted to our friend and correspondent, A. B. Johnson, Esq., of Utica, for the following interesting and valuable explanation of the principle connected with this subject, which has embarrassed many clever men. He says:

"Great Britain suspended specie payments during more than 20 consecutive years, but it never attained to more than some 20 per cent. premium over the paper money that was substituted for the specie. We have suspended specie payments for only about three years, and our premium on specie is 150 per cent. Many persons attribute the difference in the two countries, to a difference in their respective paper moneys; but in both countries the paper money was equal to specie for all domestic uses between private individuals; hence specie differed in the two countries from causes affecting specie only. Great Britain had no need for specie in liquidating foreign debts, while our foreign indebtedness constitutes an urgent use for much of the specie we possess. Had we no greater need for specie than England had, the premium here would not be higher than it was in Great Britain; and if England had suffered the same foreign need for specie that we suffer, specie would have been as high in Great Britain as it is with us; we find accordingly, that whenever England granted subsidies to any of its foreign allies, gold invariably rose with the new need therefore. By the same principle, gold and silver are continually fluctuating in relative value whenever one happens to be more needed than the other. Place the saddle, therefore, on the right horse, and instead of estimating the value of paper money by the daily changing price of specie, let us understand that the price of specie varies with the daily need therefor; and that the urgency of the need, acting on the quantity attainable, controls the price. We have added to the price of specie in our country, by the requirement of coins in payment of import duties, and of interest on a large portion of the public debt; but these requirements strengthen the argument, that specie is worth more than paper money, in proportion only as it satisfies a need that paper cannot satisfy. The time will arrive *when our paper money and specie will again be equivalents*, for all paper money is extinguishable by the liquidation of existing debts; and ours will be thus extinguished, coercively or otherwise till what remains, if any, shall become so insufficient for men's need thereof, as to make it as valuable as coin; and this could never be produced by any such process, if specie and paper differed in value irrespective of men's relative need of them."

It is noticeable in connection with this view of the subject that the receipts of gold during the last month were in excess of the exports by a very large sum. We allude to the receipts from California exclusively, as it is well-known that we are receiving continually considerable sums from South America and the West Indies, which are not reported by the daily press.

Receipts during August	$1,286,265
Shipped abroad "	686,301
Retained in the country	$599,964

The amount of gold received at New York for customs from January 1 to September 1, is stated at $52,483,259
Other ports 17,500,000

$69.983,259

If for the remainder of the year the customs produce as much as they did in 1863, to wit., $31,883,521, the whole amount of gold received in the Treasury applicable to the payment of interest will be about $101,816,780, a sum nearly double of any current necessities of the Government for interest for months to come.

When the news of the late successes of the army and navy reach the holders of our gold paying securities on the continent, we presume they will realize with even greater distinctness than ever the favorable future of American loans, as well as a handsome profit by an immediate advance. All the efforts of the London *Times* to discredit and damage the financial character of our country on the continent, will be in vain against a rise in our securities, and the regular payment of the interest in gold. Our readers will do us the justice to believe that our remarks on these and all other financial subjects are entirely without reference to any operations in the street. We have not a dollar in any scheme which depends on the opinions of Wall street. On the other hand, we affirm that what are called the money articles in most, if not all the daily papers, are written under the inspiration of leading speculative houses, and it is a fact that many of the writers of these articles not only take a chance in the street with their friends unknown to their employers, but often realize so much profit, that they are able to retire or to travel, or do anything else they please. Opinions from such sources are always and justly liable to suspicion, especially when they are expressed by professional writers, who do not feel a particle of interest in the country.

The operations of the Secretary of the Treasury particularly call forth the criticism of this class of writers. They are very much afraid that the new bonds of 1881, for the unsubscribed balance of thirty-one millions will not be taken; they fear that Mr. Fessenden's agreement to accept the two year legal tender 5 per cents will bring them out in such quantities as to swamp the loan and cause it to produce nothing. *Consequently* the Secretary will be compelled to do this thing or that thing, as the writers have ingenuity enough to imagine. On the contrary, we learn that offers of foreign capitalists are already certain to be made of a most favorable character. Only two per cent. deposit is necessary at the time of subscription, and the instalments are easy. The interest on the bonds commences at the date of subscription. It will be seen that there are several little advantages given to subscribers as regards this loan; there are per centages and commissions lying about to tempt the brokers, and we are inclined to believe that the loan will be popular, and that it will be a profitable operation even for the speculators in the street.

For we must not forget that the military condition of our affairs was never more promising than at present. We all have known what the persistent spirit and overpowering strength of the loyal States were able to do, if they chose; and we have been equally confident that if the Government had been administered with an ability corresponding with the wishes of the people, this rebellion would have been put down long ago. But as it is, the blow which has fallen on the confederates in Georgia, the death of their great partizan leader, and the mortal hold which has been taken of Richmond by an army, that will not be denied, and is now being rapidly reinforced and strengthened are evidences of the collapse of the confederate cause, which neither foreign sympathy nor domestic treason, nor the loud boastings of the rebel press can longer postpone. And the sooner the better for our misguided brethren at the South, for their present and future interests, for their permanent peace and prosperity. While everywhere else in the world the nations are seeking strength by unity, it is folly for us to hope to obtain it by divisions of our territory. None but fools or knaves can advocate the establishment of new confederacies, with a common interest as against foreign nations, which can ever be as strong, as influential, or as useful as that we have already made to our hands by wiser men, than now seem to be playing the part of statesmen. We repeat it then, that the military situation is all we could wish at the present moment, and to give up the advantage under any pretence whatever would be not only an absurdity but an act of treason.

The Government stocks remain steady therefore, gold has fallen very largely within the last two weeks, and foreign exchange is about par in gold, and no great demand. The present bonds of 1881, are selling at 107½ to 107⅝, and the 5-20 6's have advanced to 110¼. Railway shares and bonds seem now to stand in high favor with investers, and are held without regard to speculation. If there is any kind of security in the world which may be relied on, it is that of a well-managed railway company.

The balance in the Sub-Treasury in N. Y. on Tuesday was $16,866,918.

The aggregate value of the imports of general merchandise, other than dry goods and specie, at this port for the week ending September 3, was $1,937,893, against $2,169,046 in 1863, and $3,337,-102 in 1862.

The amount of exports from New York last week was $5,286,408 against $2,637,963 in 1863, and $2,820,873 in 1862. The shipments of specie for the week were $444,503—a total since January 1, of $32,230,454. The exports since January 1, have been $140,748,002 against $121,685,027, an

increase of $19,062,975 on the same period in 1863. The customs gold revenue at New York, specifically pledged to the payment of the interest on the funded and fundable debt of the United States from January 1 to September 3, was $52,-881,677.

The value of foreign goods imported into the port of Boston for the week ending September 2, was $895,298, against $345,034 for the corresponding week in 1863. The exports were $415,925 against $257,070 for the corresponding week in 1863.

The foreign exports from the port of Baltimore during the past week were valued at $781,857.

☞ We invite attention to the advertisement of Messrs. John A. Iselin & Co., 32 Wall street, this city. Gold, Government Securities, Railway and Mining Stocks, etc., etc., bought and sold on commission. Mr. Iselin is an old established Broker of 16 years' standing. Geo. A. Soper and Sam'l F. Lockwood, his associates, are young men who were with Mr. Iselin.

Minnesota Central Railroad.

Iron for this road continues to arrive at St. Paul. The track is laid seven miles from Mendota. Two bridges over the Mississippi are progressing rapidly; machine shops and depot buildings are going up; and the road is expected to be in running order to Northfield or Fairbault this fall or winter.

New London Northern Railroad.

Proposals will be received until the 17th September, for the graduation and masonry of the extension of this road from Amherst to Grout's Corner in Montague—a distance of 15 miles. The work will be let entire, or in sections to suit bidders. The office of the company is at New London, Ct.

St. Paul and Pacific Railway.

The Secretary of the Interior has certified to the St. Paul and Pacific Railway branch line lands amounting to 34,524 acres. These lands are among the most valuable and attractive to settlers to be found in Minnesota. The road is now finished to Anoka, a distance of thirty miles directly north of St. Paul, and fifty miles more will be completed and in running order, it is confidently anticipated, some time the ensuing fall. George L. Becker, Esq., is the President and Land Commissioner of the road, (office at St. Paul,) Wm. B. Litchfield, Vice President and General Manager.

☞ A large force of workmen are at present engaged in laying the double track on the Baltimore and Washington Railroad. It is thought that the entire work will be completed by November.

☞ Col. George A. Merrill of St. Johnsbury has received and accepted the appointment of Superintendent of the Rutland and Burlington Railroad.

☞ E. H. Tracy, Esq., has been appointed Superintendent of the Morris and Essex Railroad.

☞ Hon. Simeon Draper, has been appointed Collector of the Port of New York, vice Hiram Barney resigned.

Railroad Earnings--Monthly.

The earnings of the Chicago and Northwestern Railway for the month of August, 1863 and 1864, were:

	1863.	1864.
Passenger	$103,235 29	$162,288 78
Freight	187,663 93	322,240 14
Express	3,563 60	5,543 19
Mail	5,144 47	5,622 51
Total	$299,607 29	$495,694 62
Increase 65 44-100 per cent		196,087 33

The business of the Illinois Central Railroad for the month of August, 1864:

LAND DEPARTMENT.

Acres construction lands sold	19,608.50 for	$201,147 79
Acres Interest Fund Land sold	5,490.45 "	54,163 88
Acres Free Lands sold	1,307.80 "	18,380 81
Total sales during month of Aug. 1864	26,406.03 for	$273,692 43
To which add town lot sales		3,600 95
Total of all		$277,293 38
Acres sold since Jan. 1, 1864	189,879.85 for	$2,014,564.27
Cash collected in August		$303,870 16

TRAFFIC DEPARTMENT.

Receipts from passengers	$168,839 66
" freight	400,235 95
" mails	6,358 34
" rent of road	4,000 00
" other sources	6,000 00
Total receipts in month of Aug., 1864	$585,433 95
Total receipts in month of Aug., 1863	511,304 90

The earnings of the Long Island Railroad for the month of August were $71,260 00
Corresponding month of 1863 45,316 00
Increase $25,944 00

The earnings of the Michigan Central Railroad for the month of Aug., 1864, were $346,781 36
Corresponding month of previous year 215,449 14
Increase $131,332 22

The earnings of the Toledo and Wabash Railroad for the month of August 1864 $244,114 00
Corresponding month of 1863 116,380 00
Increase $127,724 00

The earnings of the Hudson River Railroad for the month of Aug., 1864, were $306,595 00
Corresponding month of previous year 219,561 00
Increase $87,034 00

The earnings of the Chicago and Rock Island Railroad Company for the month of August, 1864, were $271,141 00
Corresponding month of previous year 151,865 00
Increase $119,276 00

The earnings of the Michigan Southern and Northern Indiana Railroad for the month of Aug., 1864, were $355,264 00
Corresponding month of previous year 235,512 00
Increase $119,752 00

The following shows the gross receipts of the Chicago and Alton Railroad during the month of August, compared with the earnings for the same time last year:

Aug., 1864 $288,018 00
Aug., 1863 178,089 00
Increase $109,929 00

The earnings of the Cleveland and Pittsburg Railroad for the month of August were $264,637
Corresponding month of 1863 182,034
Increase $82,603

☞ Hon. ALBERT S. WHITE, the District Judge of Indiana, died at Lafayette on the 5th inst. Judge White was a representative in Congress, from Indiana, from 1837 to 1839; a Senator from 1839 to 1845, and again Representative in the 37th Congress. On the death of Hon. Caleb B. Smith he was appointed by President Lincoln Judge of the U. S. District Court for the State of Indiana.

Railroad Earnings--Weekly.

The following is a comparative statement of the earnings of the Chicago and Northwestern Railway for the 4th week in August:

	1863.	1864.
Passengers	$38,926 29	$70,240 17
Freight	71,035 01	124,618 40
Express	890 90	1,826 27
Mail	1,286 13	1,406 45
Total	112,138 33	197,591 29
Increase 76 20-100 per cent		$85,452 96

The earnings of the Chicago, Burlington and Quincy Railroad for the third week in August were $139,401 90
Corresponding week of previous year 87,252 45
Increase $52,149 45

The Detroit and Milwaukee Railroad traffic for the 3d week in August was $28,536 00
Corresponding week of previous year 18,434 00
Increase $10,103 00

The earnings of the Grand Trunk Railway for the week ending Aug. 29th, 1864, (including the receipts of the Montreal & Lake Champlain and Buffalo & Lake Huron Railways), were: $107,510 00
Corresponding week, 1863 88,983 00
Increase $18,527 00

The earnings of the Chicago and Alton Railroad Company for the week ending August 31, were:

	1864.	1863.
Passengers	$38,676 76	$16,446 59
Freight	57,674 59	31,226 07
Sundries	1,209 23	2,230 41
Total	$97,560 58	$49,903 07
Increase 1864		$47,657 51

The traffic of the Great Western Railroad for the week ending August 26th, '64, was as follows:

Passengers	$33,617 64
Freight and live stock	20,408 08
Mails and sundries	1,229 86
Total	$55,255 53
Corresponding week of 1863	42,564 15
Increase	$12,691 38

The earnings of the Racine and Mississippi and Northern Illinois Railroad for the week ending Aug. 21, 1864, were:

	1864.	1863.
Passengers	$2,813 44	$1,952 44
Freight	8,408 22	4,893 33
Express	104 16	75 00
Mails	296 58	296 58
Total	$11,622 40	$7,217 35
Increase		$4,405 05

Receipts from January 1st to Aug. 21:

1864	$348,895 51
1863	212,401 66
Increase	$136,493 85

Chicago and Northwestern Railway.

The earnings of this road for three months ending August 31, were:

	1863.	1864.
Passenger	$281,520 16	$418,175 49
Freight	627,318 33	1,066,076 10
Express	10,799 53	17,256 66
Mail	15,391 11	16,865 39
Total	$935,029 13	1,518,373 64
Increase 62 38-100 per cent		583,344 51

Damages from Construction of Roadway.—Effect of Release.—Delivery.

The case of the Cincinnati, Wilmington and Zanesville Railroad Company against Thomas Iliff was an error to the District Court of Perry County, Ohio.

The original action was brought by Iliff against the railroad company in the Court of Common Pleas of Perry County, and was for entering and trespassing upon lands of said Iliff, and appropriating the same for the use of a railroad. The case was taken to the District Court by appeal, and therein came to trial to a jury and resulted in a verdict and judgment for the plaintiff.

It appeared that at the trial in the District Court the plaintiff offered evidence to the jury tending to prove that the company, prior to the commencement of the suit, opened its roadway through his farm one hundred feet wide and nearly a mile and a half in length. Also, that in the execution of the work upon said road, he sustained damages outside of the roadway, in this: that his grass, meadows and grain fields, which were enclosed with fences, were necessarily passed through in hauling stone for a culvert in said roadway, and that the meadows, grass and grain were greatly injured and destroyed by cattle and other stock, in consequence of the enclosures being left open by the teamsters, who in hauling the stone, passed and repassed. Also, that he had sustained a large amount of damage outside of the road bed in consequence of the deposit by the company, of timber and trees cut thereon, upon the plaintiff's lands adjacent to the roadway. The company then offered in evidence a release of a right of way by said Iliff in said lands and premises, signed and sealed by him, which is as follows: "In consideration of one dollar to be paid by the Cincinnati, Wilmington and Zanesville Railroad Company, we do hereby grant and release to said company the right to enter upon any lands I own which lie in the line of said company's road, surveyed and adopted by them, (or intended to be surveyed and adopted by them,) and the right to run in curves, and amend the line in the final construction of such railroad over said land, and to hold and use a strip thereof to be selected by the engineer, not exceeding one hundred feet in width for the purposes of a railroad, so long as may be necessary. Witness my hand," etc.

The company offered also in evidence to the jury, a written contract between one Chamberlain and the company, for the construction of its road by him, east of Lancaster, and embracing that part of the road running through the plaintiffs farm. As no question arises out of the provisions of that contract, it is unnecessary to embody it here.

The company offered evidence to the jury, tending to prove also, that all the injuries complained

of by the plaintiff outside of the road bed were done by Chamberlain and his employees in the execution of said written contract.

The plaintiff then offered evidence to the jury tending to prove that the release of the right of way executed by him, and given in evidence by the company, was, on the day of its date, by him placed in the hands of one Carrol as an *escrow* with authority to deliver it to the company, upon the condition that three of his neighbors, Reed, Crosby and Cherry, should execute and deliver to the company, like unconditional releases of rights of way through their respective farms, and that if these neighbors failed to do so, then the plaintiff's release should be returned to him, and not delivered to the company, and that Carrol promised to hold such release on such condition, and return it to the plaintiff if the condition was not complied with; that said Reed, Crosby and Cherry did not execute and deliver releases of right of way as provided for in said condition, but only special contracts touching the right of way through their respective farms.

The company then offered evidence to the jury, tending to prove that some months prior to the date of the plaintiff's release, the company through properly authorized officers, had employed said Carrol, for a compensation to be paid him therefor, as its agent to procure the right of way for its railroad through the county, and that the plaintiff when he delivered the release to Carrol, knew of the existence of such agency.

The jury found a verdict in favor of the plaintiff on which judgment was entered, and to reverse his judgment of the District Court, filed a petition in error in the Supreme Court.

Brinkerhoff, J.—To give a construction to and to declare the legal effect of contracts introduced in evidence to a jury, is undoubtedly the proper function of the Court; and it is the duty of the Court before whom the case is tried, so to do, if requested. But under the circumstances disclosed in the bill of exceptions, the failure of the Court below to do so in this case involves no error. It would seem that by the voluntary acts and actual or tacit consent of counsel on both sides, the contract between the railroad company and Chamberlain, for the construction of the road was formally offered and received as a part of the evidence in the case; but as is quite common in practice, when neither party desires to have the written evidence adduced construed by the Court, and when both parties are willing to trust its reading and interpretation to the jury, it was not read to either Court or jury; the attention of the Court was not specially called to its provisions; no request was made for its construction by the Court; and it was probably permitted to lie upon the table of counsel until the jury retired to deliberate on the verdict to be rendered, and then with other evidence it was handed to them. To claim that the failure of the Court to construe the contract under these circumstances is error, would be unfair, alike to the Court and to the opposite party; and if the claim were sustained it would sanction what would often be a surprise upon both. If a party desires the construction of the Court in regard to the contents of a written instrument, in evidence, he must in some way manifest such desire.

On the suppositious state of facts, to be found by the jury on an examination of said contract, the Court laid down the rule correctly, and in strict accordance with the ruling of this Court in Cincinnati *vs.* Stone, 5 Ohio, St. Rep., 38. It charged, "that if they found from the contract, that the company did reserve the right to control the mode and manner of constructing the road, then as to the damage sustained by the plaintiff outside of the one hundred feet not covered by the release, and also as to the damage done inside of said one hundred feet, in case they found, on the evidence and the law as before given, the release to be inoperative, the company was liable to the plaintiff for all damages he had proved he had sustained." And to guard against the possible inference from this general proposition, that the company might be held responsible for injuries by the contractor or his employees, growing out of acts not within the company's reserved power to control, or for injuries not by a reasonable necessity involved in the very act of constructing the road, the Court adds: "in all respects falling within the limits of the right of the company so reserved to direct and control;" and "that beyond those limits, the company would be responsible only so far as the construction of the road by a reasonable necessity, involved the doing of the damage complained of."

I have considered the last exceptions first, for the reason that in respect to them, the majority of the Court is very clear in the opinion that there was no error in the Court below.

The first exception presents a question of more doubt and difficulty, but in respect to that also, the majority of the Court is of opinion that there was no error.

The action was brought to recover damages for an alleged trespass upon, and an appropriation of the plaintiffs' land for the construction and use of a railroad. The railroad company answered, setting up in bar of the action, an alleged release of the right of way to it by the plaintiff. The signing and sealing of the instrument of release was not contested by the plaintiff. But the point of contest was whether the release had ever become operative by what, in law, amounted to an effective delivery. The record shows, and it was admitted on all hands, that the paper after being signed and sealed, was put into the hands of one Carrol, who was an agent of the company to procure the right of way for its road, and who subsequently delivered the paper into the possession of the company without any other authority from the plaintiff than what was given by him when he parted with its immediate custody.

From the tenor of the charge of the Court below to the jury, it would seem to have been claimed there in behalf of the company, as it is claimed here, that the act of the plaintiff in handing over the instrument of release to a known agent of the company to procure the right of way for its road, was of itself and *necessarily* in law, an effective delivery to the company.

On the part of the plaintiff, it seems to have been contended, as it is contended here, that he did not deliver the paper as a completed instrument of release to Carrol, as the agent of the company to accept such delivery; but that, at the time he handed the paper over to Carrol, he distinctly constituted him his own agent, or depositary, to hold the instrument as an *escrow*, until the performance of the condition mentioned in the statement of the case; and in case of its non-performance to return it to him; and that such act of handing the paper over to Carrol, was not in law, a delivery to the company.

Such being the claims of the parties respectively, and evidence having being given by both parties in support of their respective claims as to matters of fact, the Court below charged the jury, "that if they found the release of the plaintiff was executed, and delivered by him to Carrol, upon the condition hereinbefore stated, and that the condition had not been performed at the time Carrol delivered the release to the company, *the same was obligatory upon the plaintiff*, if he knew, or had good reason to believe, at the time he so delivered the release to Carrol, that Carrol was the agent of the company for the purpose of procuring for it the right of way for its railroad through the county; *unless* Carrol was distinctly constituted the plaintiff's agent, as well as the agent of the company for the purpose of holding and *returning to him* the paper in case of the non-performance of the condition; and that this could be done, although the plaintiff knew that Carrol was acting as the agent of the company in obtaining such right of way; that it was competent for the plaintiff, by plain and distinct terms to constitute Carrol his own agent for the purpose of holding the release, and returning it in case of the non-performance of the condition; and that it made no difference that the company did not know of, or give its consent to such agency in behalf of the plaintiff."

The delivery of the release to Carrol, in the case before us, is claimed by the defendant in error to have been a delivery of it as an *escrow*. I confess I am unable to see any objection to giving it that name; and to my mind, the state of fact which, under the charge of the Court the jury must have found, bring it clearly within the definition of an *escrow*. Chancellor Kent (4 Com., 454,) thus defines *an escrow*. A deed "may be delivered to a stranger as an *escrow*, which means a conditional delivery to the stranger, to be kept by him until certain conditions be performed, and then to be delivered over to the grantee. Until the condition be performed, and the deed delivered over, the estate does not pass but remains in the grantor. Generally an *escrow* takes effect from the second delivery, and is to be considered as the deed of the party from that time; but this general rule does not apply when justice requires a resort to fiction."

The phrase "a stranger, used in this definition, or the phrase "a third person," which, in many of the books, is used interchangeably with it, it seems to me can mean no more than this, a stranger to the deed as not being a party to it; or at most, this—a person so free from any personal or legal identity with the parties to the instrument, as to leave him free to discharge his duty, as a depositary, to both parties, without involving a breach of duty to either. And I believe that no case can be found, no opinion of any jurist can be cited, to the effect that the agent of one party is incapacitated from becoming the depositary of an *escrow*, and if we were to decide that such incapacity existed, we would originate a distinction hitherto unknown to the books.

Judgment affirmed.

Statistical Abstract for the United Kingdom.

A statistical abstract for the United Kingdom, for each of the last fifteen years, from 1849 to 1863, has just been published and presented to Parliament. This abstract includes a statement of the gross revenue and expenditure for that period, as estimated in the budgets, and received into the exchequer, and the amount of its several branches; also statistics of imports and exports, bullion, transmitments, shipping, excise, savings banks, population, railways, mines, &c., for the several years from 1849 to 1863.

During the fifteen years mentioned, the actual receipts in three years only were less than the estimated amount in the budget; while in 1854, and the present financial year ending March 31, the surplus of receipts exceeded two millions. In all the other years the surplus over the estimated receipts was below that amount, being in one year, 1855, only £154. As regards expenditure during the fifteen years in question, the outlay was, in seven instances more, and in eight years less, than the estimated amount in the budget.

An abstract of alterations of taxes from 1849 to 1863 shows under the heads of customs, excise, property and income tax, other taxes, and stamps, that the total amount of taxes repealed or reduced has been £35,151,818; but, as the taxes imposed during that period amounted to £26,978,020, the actual diminution was £8,173,798. The balances in the exchequer at the end of each financial year show that on the 1st of January, 1850, the amount was £9,748,540, and at the close of 1846, £7,352,543.

The real value of the total imports into the United Kingdom was, in 1854, £152,389,053; and in 1863, £248,980,942. In 1854 the total amount of exports was £115,200,145; and in 1863, £195,974,773. Full details of the exports and imports of the various foreign countries and British possessions are also embodied in the return, the statistics of British and foreign shipping, sales of corn, and the principal market towns in England and Wales, being included.

Under the head of railways, it is stated that the number of miles open in 1849 was, 6,031; and in 1862, 11,551 miles. The total amount of railway capital in the first mentioned year was £229,749,778; and in 1862, £385,218,438. The traffic receipts in 1849 amounted to £11,806,491; and in 1862 to £29,128,558.

Light Magnetizing Steel.

It has often been stated that light will magnetize a bar of steel, but, according to the experiments of M. St. Victor, the distinguished French chemist, the common opinion in this respect is an erroneous one. He has tried several experiments upon fine needles, but has not succeeded, and concludes, therefore, that this activity of light is not owing to electricity or magnetism. From his various experiments with magnetized and unmagnetized needles, he concludes that light has no effect upon their electricity. From all that appears in respect to this subject, it is manifest that, with light alone, it is impossible either to magnetize or demagnetize any body.

☞ The number of emigrants landed here last week was 2,041—making the number since January 1, 137,342. The number landed in the corresponding period of last year was 107,798. In the early part of the year the Irish emigration was largely in excess of the German, but the proportion has gradually diminished, and now the number of Germans arriving largely exceeds the Irish. The commutation balance now in bank is $72,549 87.

Milwaukee and St. Paul Railroad.

The first through train on the new route of the Milwaukee and St. Paul Railway *via* Columbus, Watertown and Oconomowoc, arrived here this morning, and was the occasion of quite an enthusiastic demonstration on the part of railroad men and many of our citizens.

Hereafter the through St. Paul trains will continue to run by this new route, three trains leaving here daily, the same as heretofore on the old route, *via* Horicon.

There were six or seven passenger cars on this first through train, and they were all completely filled, while the passengers were universally delighted with the new arrangement. The route is through the garden of the State, from here to Portage, and the pleasant thrifty villages and towns of Pewaukee, Oconomowoc, Watertown, Columbus, &c., will give additional interest to the trip. From the junction to Milwaukee, the trains are at present obliged to run over the track of the Milwaukee and Prairie du Chien Railway, but some time next month the Milwaukee and St. Paul will have the entire distance spanned by a track of its own. It is completed and in use already, all the way except from here to the junction. Now give us the Union Depot, and we will have unbroken connection through Milwaukee. This will be a strong point gained in our favor.—*Milwaukee Wis., Aug.* 31.

Railroads in Vermont.

Notices have been given of intention to apply to the next Legislature of Vermont for the following charters:

For a charter for a railroad company with power to construct a railroad from Rutland through Ira to Castleton.

For a charter for a railroad connecting with the Rutland and Washington Railroad at some point in Poultney or Castleton, and extending through the towns of Fairhaven, Benson, Orwell, Shoreham and Bridport, or any of them, and connecting at some point on Lake Champlain with a line of steamers to be built and owned by said company.

For a charter for a railroad from Windsor to connect with the Rutland and Burlington Railroad at some convenient point in the town of Chester or Rockingham.

For a charter for a railroad from St. Johnsbury, to connect with the Atlantic and St. Lawrence road.

For a charter for a railroad from Fairfax, to unite with the Vermont and Canada road in Georgia.

The United States Railway Post Office.

We are pleased to learn that this new and important system will be inaugurated as speedily as possible. When in operrtion, letters for any city, town, or village between Washington City and New York, or to places immediately diverging from that line of travel, can be deposited in the letter boxes of this car up to the very moment of its departure, and with certainty that as quickly as the train reaches the point to which the letter is addressed the correspondence will be there delivered. These advantages will also apply to the distribution, prompt transmission, and regular delivery of newspapers. One of these new post-office cars reached here yesterday. On the exterior we are informed that this is the "Through line between New York and Washington." There are also the usual apertures through which letters may be conveniently dropped in for mailing. The car is forty-five feet five inches in length, in breadth nine feet four inches. The roof is finished in elegant style, with the most approved ventilating windows, in the centre about nine feet, and at either side seven. The interior of the car is furnished with four hundred small boxes or "pigeon holes," and eighty feet of dimensions which will admit of packages, newspapers, or other printed matter, mailing tables, drawers for mailing purposes; whilst stoves, water apparatus, and other conveniences cannot fail to render the traveling clerks perfectly comfortable. This beautiful and substantial car is the handiwork of the mechanics of Mount Clare Works, Baltimore and Ohio Railroad Company. The design is that of Hon. A. N. Zevely, Third Assistant Postmaster-General. There is a second car now finishing at the works of the Camden and Amboy Company. When that is received, in a few days, the new plan will be put into operation.—*Washington Chronicle, August* 30.

Interest and Dividends.

The Hudson River Railroad Company have declared a dividend of three per cent. payable on the 15th inst. free of tax.

The Chemung Railroad Company will pay on demand a Quarterly Dividend of two per cent., free of government tax, at the Park Fire Insurance Office, 237 Broadway.

Albany and Susquehanna Railroad.

At the annual election held on the 6th inst., the following persons were chosen directors for the ensuing year: Joseph H. Ramsey, Edward C. Delavan, Peter Cagger, Jacob Leonard, Albany; Charles Courter, Cobleskill; John Westover, Richmondville; John Cook, Worcester; Jared Goodyear, Milford; E. R. Ford, Oneonta; Arnold B. Watson, Unadilla; Lewis Northrup, Colesville; Alonzo Everts, Binghamton; Daniel Drew, New York.

At a subsequent meeting of the Directors, Joseph Ramsey was elected President and Jared Goodyear Vice President for the ensuing year.

The Cotton Trade of China.

Total exports of cotton from Shanghae during the year commencing June 1, 1863, and ending May 31, 1864:—

	Piculs.
To Great Britain (direct)	332,133 04
To Hong Kong	203,684 53
To coast ports	61,133 55
To India (direct)	15,291 00
To America (direct)	1,728 63
To Manila (direct)	148 35
To Japan	347 00
Total piculs of 133⅓ lbs.	664,466 10

Value of cotton exported from Shanghae from June 1, 1863, to May 31, 1864, inclusive, obtained by average monthly prices as declared by merchants, 12,805,494 10 Shanghae taels; at exchange, 6s. 6d., £4,161,460.

Railroad across the Pyrenees.

An interesting event has just taken place in the Pyrenees. A locomotive on a trial trip passed on the 15th ult., from Spain into France, across the mountains. More than sixteen miles of tunnel had to be traversed, some of them, it is said, at an elevation of thirteen hundred feet. The official inauguration of the line is reserved for the Emperor's presence at Biaritz.

☞ The Pictou *Standard* learns that the Chief Engineer of the Nova Scotia Railways has reported in favor of adopting the East River line for the Pictou Railway route, and the Surveyors are now employed in locating a portion of the line near the Albion Mines.

☞ The valuation of Providence this year is —real estate, $38,961,900; personal property, $41,037,900; total, $79,999,800—an increase of $13,584,000 since last year. The rate of tax is $7 on $1,000.

☞ The whole number of sheep in Ohio is 4,300,000, and this year's wool will be 19,000,000 pounds, worth $15,000,000.

Iron Bridge across the Schuylkill River.

The Philadelphia *Railroad and Mining Register* states that the connecting railway bridge will cross the Schuylkill River a little west of Girard Avenue bridge, where there are bold, high bluffs of bare rock on either side of the channel. The piers will rest on foundations laid on solid rock. The work is progressing. An iron section of two hundred and seventy feet span will arch the channel of the river. To this iron section, which is being built in the Altoona shops of the Pennsylvania Railroad Company, the road will be carried on massive brick arches of sixty feet span. The track will be about seventy feet above the surface of the Schuylkill River, and it will rest on a bridge over the carriage way and sidewalks of Girard Avenue. In fact, from its forked junction with the Pennsylvania Railroad, the connecting railroad is located at an elevation which will carry its track over the intersecting rail and carriage roads on either side of the Schuylkill River, thereby rendering collision impossible at such intersections, at the same time securing an important object without risk to the public.

PORTABLE ENGINE DEPARTMENT
OF THE
WASHINGTON IRON WORKS,
NEWBURGH, N. Y.
AGENCY, 55 Liberty street, New York, Room No. 8. Engines of all sizes, from 3 to 30 horse power, furnished at short notice. 2t-37

DOUBLE FLANGE R. R. CAR WHEELS.
BALL AND WHEELOCK, PATENTEES.

RIGHTS FOR SALE BY
DAVIDSON, DICKINSON & CO.,
CIVIL ENGINEERS,
229 Broadway, N. Y.

TIRES,
LOWMOOR, BOWLING & SEMI-STEEL.
AXLES,
Kinsly Co., Bridgewater and Nashua.
For sale by WILLIAMS & PAGE,
67 Water, St., Boston.

SAVING OF FUEL TO PARTIES USING STEAM.
DAMPER REGULATORS.
GUARANTIED to effect a great saving in fuel, and give the most perfect regularity of power. For sale by the subscribers who have established their exclusive right to manufacture Damper Regulators, using diaphragms or flexible vessels of any kind. CLARK'S PATENT STEAM AND FIRE REGULATOR COMPANY, No. 5 Park Place, N. Y.

WANTED
A gentleman with a capital of $25,000 to take an interest in a Car Manufacturing Establishment at New Haven, Ct. The business is already established, with a large capital invested, and in successful operation. Address this office, or box 2287 P. O., New Haven, Ct.

ENGINEERING AND CHEMISTRY.
UNION COLLEGE.
DEPARTMENT OF APPLIED SCIENCE.
I. COURSE OF INSTRUCTION IN CIVIL ENGINEERING.—Embracing Drafting, Surveying and Leveling, General Construction in Masonry, Carpentry, &c., Road Making Bridge Building, Water Engineering, &c.; under the direction of Prof. W. M. GILLESPIE, LL. D.
II. COURSE OF INSTRUCTION IN ANALYTICAL CHEMISTRY.—Comprising Qualitative and Quantitative Analysis, with special reference to Students of Agriculture and of Medicine, Pharmaceutists, Manufacturing Chemists, Mineralogists, &c.; under the direction of Prof. C. F. CHANDLER, Ph. D.
☞ The next term commences Sept. 16.
For Circulars, &c., address "Registrar of Union College, Schenectady, N. Y." 4t 34

Car Duck. Hemp Packing.
HEAVY 4 Ply Fitchburg Duck 100 to 140 inches wide.
BEST HACKLED HEMP PACKING.
For sale by
WILLIAMS & PAGE, Boston.

LEMUEL W. SERRELL,
SOLICITOR OF
AMERICAN & FOREIGN PATENTS,
NO. 121 NASSAU STREET,
NEW YORK.

RICHARD DUDGEON,
MACHINIST,
24 COLUMBIA ST., NEW YORK,
WOULD respectfully inform his friends and the public that he has removed to his new Building No. 24 Columbia Street, where he is prepared to furnish

Hydraulic Jacks, of from 4 to 150 tons lifting power. PULLING JACKS of different sizes.
Hydraulic Presses WITH PLATENS.
Hydraulic Punches for punching iron from three-eighths to 1 inch thick. Force Pumps for Hydraulic Presses. Force Pumps for testing tubes, cylinders, etc.
STEAM CARRIAGES for good hard roads.—Squirting Oil Cans, also Denver's Patent Steam Hammer

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.,
NEW YORK, Aug. 16, 1864.

AT A MEETING OF THE BOARD OF DIRECTORS of the Illinois Central Railroad Company held this day, the following resolutions were adopted:

Whereas, In the mortgage given by this company to the trustees to secure their construction bonds, it was agreed that the moneys received upon sales of the lands mortgaged, as fast as received, be applied to the cancellation of said bonds, and it has become necessary for this purpose to take up a portion of the bonds in pursuance of a provision contained in each bond, the company may "pay the same at any time to be named by them by adding to the principal a sum equal to twenty per cent. thereof."

Resolved, That the Company will, on the first day of October next, pay the seven per cent. bonds for one thousand dollars each, numbered from one to three thousand, (1 to 3,000,) with twenty (20) per cent. added to the principal thereof, upon surrender at its office in the City of New York; and that it doth hereby name the first day of October, 1864, as the time when the principal of said bonds shall be paid, after which day interest upon them will cease.

Resolved, That the holders of the scrip stock of this Company be required to pay the unpaid ten per cent. upon the stock held by them respectively, on or before the twenty-sixth day of September next, at the office of the company in the City of New York; and that upon all sums unpaid, interest will be charged from that day; and that after the twenty-sixth day of September next, no transfer shall be made of stock which shall not be paid in full. THOMAS E. WALKER, Treasurer.

U. S. 7-30 LOAN.

The Secretary of the Treasury gives notice that subscriptions will be received for Coupon Treasury Notes payable three years from Aug. 15th, 1864, with semi-annual interest at the rate of seven and three-tenths per cent per annum,—principal and interest both to be paid in lawful money.

These notes will be convertible at the option of the holder at maturity, into six per cent gold bearing bonds, payable not less than five nor more than twenty years from their date, as the Government may elect. They will be issued in denominations of $50, $100, $500, $1,000 and $5,000, and all subscriptions must be for fifty dollars or some multiple of fifty dollars.

The notes will be transmitted to the owners free of transportation charges as soon after the receipt of the original Certificates of Deposit as they can be prepared.

As the notes draw interest from August 15, persons making deposits subsequent to that date must pay the interest accrued from date of note to date of deposit.

Parties depositing twenty-five thousand dollars and upwards for these notes at any one time will be allowed a commission of one-quarter of one per cent, which will be paid by the Treasury Department upon the receipt of a bill for the amount, certified to by the officer with whom the deposit was made. No deductions for commissions must be made from the deposits.

SPECIAL ADVANTAGES OF THIS LOAN.

IT IS A NATIONAL SAVINGS BANK, offering a higher rate of interest than any other, and THE BEST SECURITY. Any savings bank which pays its depositors in U. S. Notes, considers that it is paying in the best circulating medium of the country, and it CANNOT pay in anything better, for its own assets are either in government securities or in notes or bonds payable in government paper.

It is equally convenient as a temporary or permanent investment. The notes can always be sold for within a fraction of their face and accumulated interest, and are the best security with banks as collaterals for discounts.

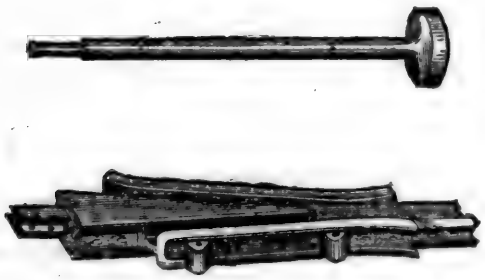
Convertible into a Six per cent. 5-20 Gold Bond.

In addition to the very liberal interest on the notes for three years, this privilege of conversion is now worth about three per cent per annum, for the current rate for 5-20 Bonds is not less than NINE PER CENT PREMIUM, and before the war the premium on six per cent U. S. stocks was over twenty per cent. It will be seen that the actual profit on this loan, at the present market rate, is not less than ten per cent per annum.

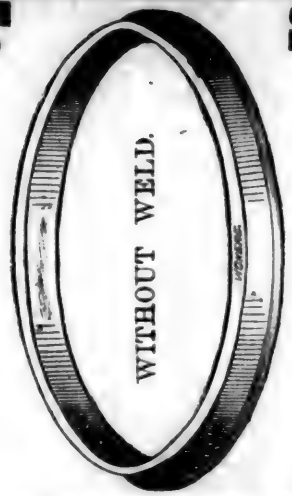
Its Exemption from State or Municipal Taxation.

But aside from all the advantages we have enumerated, a special Act of Congress EXEMPTS ALL BONDS AND TREASURY NOTES FROM LOCAL TAXATION. On the average, this exemption is worth about two per cent per annum, according to the rate of taxation in various parts of the country.

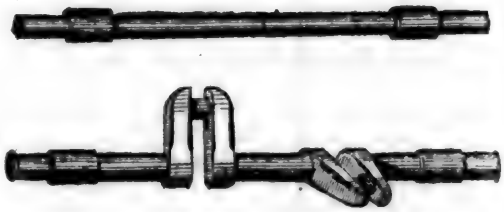
It is believed that no securities offer so great inducements to lenders as those issued by the government. In all other forms of indebtedness, the faith or ability of private parties, or stock companies, or separate communities, only, is pledged for payment, while the whole property of the country is held to secure the discharge of all the obligations of the United States.



While the government offers the most liberal terms for its loans, it believes that the very strongest appeal will be to the loyalty and patriotism of the people.



Duplicate certificates will be issued for all deposits. The party depositing must endorse upon the ORIGINAL certificate the denomination of notes required, and whether they are to be issued in blank or payable to order. When so endorsed it must be left with the officer receiving the deposit, to be forwarded to the Treasury Department.



SUBSCRIPTIONS WILL BE RECEIVED by the Treasurer of the United States, at Washington, the several Assistant Treasurers and designated Depositaries, and by all National Banks which are depositaries of public money,

AND ALL RESPECTABLE BANKS AND BANKERS
throughout the country will doubtless
AFFORD FACILITIES TO SUBSCRIBERS.

CAST STEEL.

MANUFACTURED BY

NAYLOR, VICKERS & CO., SHEFFIELD, ENGLAND.

CAST STEEL TYRES WITHOUT WELD,

Reversible Crossings and Frogs, Disc Wheels, Pistons and Piston Rods without weld, Crank and Straight

AXLES, AND EVERY DESCRIPTION OF STEEL FOR RAILWAY PURPOSES.

STEEL CROSSINGS have been in use more than three years with very little perceptible wear, in places where the ordinary ones had to be replaced every four months. They have been estimated to be good for ten years in the worst places.

THE **"VICKERS" TYRES are in constant and extensive use on almost all** the Railways in Great Britain, and also on many roads in other parts of Europe. Their chief advantages are:—1. Their Durability: they will outlast any Iron Tyre without being turned, and for this reason are cheaper than Iron Tyres (free of cost). 2. Their Safety: being without a weld they are not liable to break, and Steel is proved to be a stronger and tougher metal than any other. 3. Their Uniformity: they do not wear in flat places nor "laminate." 4. They are not injuriously affected by frost, and are guaranteed to stand the severest climate.

STEEL AXLES will be found economical, because they may with safety be made much lighter than those of Iron. They will wear longer and "smoother," and will consume much less oil; nor are they liable to granulate from constant use.

For CIRCULARS, GIVING FULL PARTICULARS AND TESTIMONIALS, PRICES, etc., apply to **NAYLOR & CO.,**

421 Commerce street, Philadelphia; 99 John street, New York; 80 State street, Boston.

BOONTON IRON WORKS.

PATENT MACHINE FORGED

BOLTS AND NUTS.

WE are now manufacturing these goods at our Works at BOONTON, N. J.—In the manufacture of the Nuts, the **patented device of the "Double Punch,"** viz, two punches operating from opposite sides **towards the centre of the Nut, forces into the body of the Nut most of the Iron** which in all other processes is punched out, and also **condenses the Iron** around the Bolt hole, thus **ensuring the greatest strength in the Screw Thread**, and making a Nut **SUPERIOR TO ANY** made by hand or the ordinary machine processes. In size they are made according to the standard approved and adopted by our best Machinists and Engine Builders. The mode of making Bolts is such as to produce an **upset solid head, perfectly true on all sides, and of uniform size.** The Iron used is **of our own manufacture,** and we guaranty it of superior quality.

We invite consumers to make trial of them, and will furnish **SAMPLES** and **PRICE LIST** on application.

FULLER, LORD & CO.,
137 & 139 GREENWICH ST.,
NEW YORK.

Solid Emery Vulcanite.

WE are now manufacturing wheels of this remarkable substance for cutting, grinding and polishing metals, that will outwear hundreds of the kind commonly used, and will do a much greater amount of work in the same time, and more efficiently. All interested can see them in operation at our warehouse, or circulars describing them will be furnished by mail.

NEW YORK BELTING AND PACKING Co.,
Nos. 37 and 38 Park Row, New York.

MACHINE BELTING,

STEAM PACKING, ENGINE HOSE.

THE superiority of these articles, manufactured of vulcanized rubber, is established. Every belt will be warranted superior to leather, at one-third less price. The Steam Packing is made in every variety, and warranted to stand 300 degs. of heat. The Hose never needs oiling, and is warranted to stand any required pressure; together with all varieties of rubber adapted to mechanical purposes. Directions, prices, etc., can be obtained by mail or otherwise at our warehouse.

NEW YORK BELTING AND PACKING CO.,
JOHN H. CHEEVER, Treasurer,
Nos. 37 and 38 Park Row, New York.

NEW 7 3-10 LOAN AND TEN-FORTY BONDS.

TENTH NATIONAL BANK,

No. 240 Broadway,

Will receive subscriptions for the New 7 3-10 Treasury Notes, which will be dated Aug. 15, with semi-annual coupons, and issued in sums of $50, $100, $500, $1,000 and $5,000. Parties subscribing will be allowed interest to Aug. 15, and the commission allowed by Government of $2 50 on each $1,000. The Ten-Forty 5 per cent. Bonds date from March 1, and 50 per cent. premium for gold interest. Payments must be made in Legal-Tenders or National Bank Notes.

D. L. ROSS, President.
J. H. STOUT, Cashier. 41-31

RENSSELAER POLYTECHNIC INSTITUTE, TROY, N. Y. The FORTY-FIRST ANNUAL SESSION of this well-known SCHOOL OF ENGINEERING AND NATURAL SCIENCE, will commence SEPT. 14th, 1864. The PRINCIPAL BUILDING is completed and ready for occupation. The NEW ANNUAL REGISTER, giving full information, may be obtained at APPLETON'S Bookstore, New York, or from
31-31 Prof. CHARLES DROWNE, Director, Troy, N. Y.

FOR SALE.

SIX NEW FIRST-CLASS FLAT CARS, 4 feet 8½ inch gauge. Apply to

GEO. T. NEWHALL,
New Haven, Conn.

BAIRD'S PATENT
Incrustation Preventer,
AND REMOVER
FOR STEAM BOILERS,

In either Salt or Fresh Water. No invention connected with Steam Power combines so many advantages as this. The economy in fuel alone, from its use, repays the cost of the preventive. Certificates from Engineers and owners of Steam Boilers, at sea and on shore, can be seen at the office of

JAS. F. LEVIN,
23 Central Wharf, Boston.

Railway Travel.

We perceive from our foreign exchanges that quite a number of eminent Civil Engineers in England are turning their attention to the subject of railway accidents, with the intention of preventing them. Several interesting works on the subject have accordingly made their appearance. One of them is entitled "Railway accidents, their causes and means of prevention" by James Brumlee, C. E. Another is on "Railway accidents showing the bearing which existing Legislation has upon them," written by Captain Douglas Galton, R. E. with an abstract of a discussion on the subject by Charles Manly and James Forrest, C.E.

One of the results of these works is that the public are put in possession of statistics which explain the causes of the accidents occurring in England, upon the railways in that Country, and the remedies naturally enough suggest themselves.

Between the years 1854 and '60 inclusive as it is ascertained, 11 per cent. of these unfortunate occurrences were justly to be attributed *to defective construction and neglect of permanent way*, 7 per cent. *to neglect and defective construction of rolling stock*, and 76 *per cent. to mismanagement*, or want of good management. Under this last head are given the following as immediate causes of disaster, viz:

Negligence of servants, badly enforced regulations, want of electric telegraph, and other signals, and want of communication between the conductor, and drivers of the Engines. Of all the accidents which happen, but 6 per cent. are to be traced to any other palpable causes. This result of the inquiry is certainly making a long step towards a better system of management. We are not prepared to say how nearly the same, are the causes of disasters on our American railways. Under the head of negligence of servants we may place the numerous accidents which occur in this Country, from the neglect of the switches. Nearly all the worst of them have been directly owing to this circumstance. And we are specially liable to them for the reason, that so many of our lines are single tracks, notwithstanding they are worked by many trains day and night, and the movements of the expresses, the frequent stoppages of the freight and accommodation trains at particular points to allow each to pass in its proper direction, are all more or less the cause of danger especially at night, through inattention to the switches. Our system of signals by electric telegraph on the great lines is generally perfect, and as our telegraphic system is much simpler and more intelligible, than the needle system of the English, we have nothing to alter in this particular. The communications between the engine driver and the conductor and passengers, are simple and efficacious. Any one who will pull the cord which passes from the cars to the locomotive, can in any emergency bring the train to a full stop.

Our system of head lights is far better than the English. Particularly is the application of the air light contrivance of Dr. Smith a great advance in the right direction. The intensity of his illumination makes the track almost as visible within a stopping distance at night as in day light. Our Engine drivers as a general rule are a careful class of men, and have innumerable resources of mind and manual skill, rarely found in the stereotype who drives the trains in foreign countries. They are as a whole, remarkable men, and entitled to a more liberal remuneration, than they have yet received on all of the principal lines.

We think however that the safety and comfort of travellers may be greatly increased before railroad traveling will have reached its acme. We have done something towards this desirable object by presenting to the public, many recent improvements which we have recommended. The two last most immediately worthy of notice, are the use of the steel tyres of Krupp, and the double flange wheels, these last apparently giving perfect security against running off the track.

We have long thought that the construction of passenger cars of iron would finally prevail, and that the experiments said to be making with them on some of our roads would bring the system into general and early use. Most unquestionably, collisions and upsets where they are in use would be comparatively harmless to passengers, as the iron could not splinter, nor do more than twist or compress with the most violent concussion. The weight of these iron cars is also much less than those of wood, an important consideration. There is no good reason why the seats in cars should not be placed on springs, so that the motion should be as gentle or as insensible as that in the most scientifically hung carriage. A certain class of injuries to the limbs and to the spinal process is said to be discoverable of late in those persons whose business requires them to be frequently on railways. An easy seat in a car is perfectly attainable by a very simple arrangement.

It is not very improbable that another improvement may take place in railway traveling, that of having small cars, or cars in sections for the accommodation of families and private parties, charged for at a reasonable advance beyond the ordinary rate. At present a family party cannot without the greatest difficulty keep together while traveling. If private cars with sleeping apartments, sofas and easy chairs could be secured for a whole trip as from New York to Buffalo, or Niagara, there is no doubt that pleasure travel would be increased to a very considerable degree. So too as political meetings are constant, and the Americans are very fond of traveling in committees on public business, cars permitting such to travel conveniently together would be desirable and profitable to the Companies. When the Saratoga Railway first went into operation it was provided with a number of open barouche cars,

which were very popular, and plied at all hours between Saratoga and Balston. The latter place losing its celebrity when its best spring gave out, ceased to be attractive and these pleasant cars went out of use. The saloon car which was in use between this city and Saratoga a few years since was extremely comfortable and a great favorite with travelers. It was divided into compartments opening on a gallery on one side of the car. These apartments were carpeted, curtained, had sofas, easy chairs and centre tables, and it was a pleasure to travel in them. Why they were given up we never learned, but believe it was because they had an appearance of exclusiveness. But if all cars were made equally comfortable, the idea of exclusiveness would vanish.

Many years ago some of the cars on the southern routes were in the central portions hung quite low between the tracks, so that after entering from the platform the passenger had to descend a step or two to the body of the car. The rocking motion of the train was almost entirely prevented by this arrangement. No doubt a car hung low is safer than one hung high, especially on roads where the curves are the rule rather than the exception, and we think there will be a return to low carriages after a time, in the same way that the best companies and the most experienced are returning to the use of locomotives of less weight than has recently been the fashion, for passenger trains. The wear and tear, and saving of expense in many ways are important items to be looked after, where rapid work and light loads are found to pay the best. We understand the New England Companies have found this out and are building their new Engines accordingly.

These are a few of the opinions which our habitual attention to the subject of railways had led us on this occasion to suggest.

The New Imperial Railway from Vera Cruz to Mexico City.

A prospectus of the New Imperial Mexican Railway Company has just been issued in London. The line is to be from Vera Cruz to Mexico, with a branch to Puebla, comprising an aggregate length of three hundred miles, of which a section of twenty-five miles from Vera Cruz has been opened for some time. The capital for the purchase of this portion and the completion of the remainder is to be £5,400,000, one-half in shares and the other half in bonds or obligations. Of the share capital of £2,700,000, the Government take £800,000 (a sum intended for the endowment of hospitals, and therefore to be inalienable,) while £700,000 is to be taken in part payment for the portion of the line already executed. The amount for which subscriptions are invited from the English public is, therefore £1,200,000. At the same time the Government give a subvention of £1,200,000 in five per cent. bonds, which are to be receivable for customs duties in the proportion of one-fifth in bonds and four-fifths in cash. Among the other privileges granted the most important are that the concession is in perpetuity, and that the company are to be free to fix their own tariffs, both for goods and passengers without any limitation; the present cost of conveyance being about £20 per ton for goods, and £11 per passenger. A contract for the entire completion and stocking of the line has been entered into with the joint stock undertaking, "Smith, Knight & Co.," for a sum within the capital of £5,400,000, and eight per cent. interest during the construction is to be paid out of the State subvention of £1,200,000. The cost of the twenty-five miles already completed is not stated, but it is mentioned that the returns upon this portion have been equivalent to a profit of eleven per cent., reckoning the cost at the average per mile which is to be expended on the entire line.

Morris and Essex Railroad.

The earnings of this road for the year ending December 31, 1863, have been:

From passengers		$175,087 11
" freight		101,286 75
" Hoboken Land and Imp. Co		9,217 70
" mails, rents and sundries		8,266 18
		$293,857 69
Expenses, viz:		
Repairs of road, bridges, buildings, &c	$52,800 22	
Repairs of engines and cars	36,116 06	
Wood, oil and waste	31,117 55	
Operating the road & transporting passengers and freight	52,619 52	
Salaries and insurance	8,380 69	
Government Tax on passenger rec'pts, dividends, &c.	9,177 79	
		190,211 83
Net earnings		$103,645 86
Interest on debt	$23,255 00	
Less interest received	1,987 07	
		21,267 93
Balance		$82,377 93

Two semi-annual cash dividends of 3½ per cent., each have been paid, amounting in the aggregate to $81,046. The directors say:

In submitting to the stockholders a report of their transactions since the last annual meeting, the Board of Directors are convinced that, during no similar period of the company's organization, have so important engagements been entered into, as those of the past year. They also believe, that the most prominent of these arrangements will highly promote the public good, and at the same time advance the permanent interests of the shareholders of the company.

The first of these to which they beg leave to call the attention of the shareholders is the extension of the road from Hackettstown to Phillipsburg.

The question of building this extension or branch road is a familiar one. It has been before the stockholders, at the annual meetings, on many different occasions. Its merits have been fully considered, and resolutions adopted, requesting the directors to take measures to accomplish the object at the earliest period consistent with the interests of the company. The commencement of the work has been postponed from time to time, from various causes, beyond the control of the directors. The board, in their last annual report, in referring to this subject, "regret their inability to report the commencement of active operations." They state, "that certain arrangements between different interests represented have been necessary, and difficulties of a technical nature have intervened." Since that report was made those difficulties have been removed, and the Board take great pleasure in announcing to the stockholders, that the grading of the road has been contracted for; and that the work is now going on, and will be pushed forward, as rapidly as possible, to completion.

In arranging between the owners of the old stock, representing that part of the road between Newark and Hackettstown, and the owners of the new stock representing that part of the road between Newark and Hoboken, for a proper allowance to be made to each interest, of the proceeds of business of the branch road from Hackettstown to Phillipsburg, difficulties were encountered, which induced the parties in interest to consider the subject of a consolidation of the two stocks, so as to have but one interest over the entire line between the Hudson and Delaware Rivers. This led to a protracted negotiation, the result of which was the agreement made under date of December 12th, 1863, which was laid before the stockholders at a special meeting held in Newark, on the twenty-third day of the same month. That agreement provided that it should be submitted to the stockholders, and should only have effect upon receiving the assent of two-thirds of the shareholders in interest. The assent in writing of more than two-thirds was obtained, and is now on file in the office of the company.

This agreement, among other things, provided for the purchase of the road between Newark and Hoboken, upon terms therein set forth, including the bridge over the Passaic River at Newark, and the branch road connected therewith, belonging to the New Jersey Railroad and Transportation Company; a right of way along the track of said company, from East Newark to the point where the road built by the Hoboken Land and Improvement Company diverges; the road built by the Hoboken Land and Improvement Company, with the bridge over the Hackensack River; a perpetual right of way through the Bergen Tunnel; a tract of land at Hoboken, at the terminus of the road, containing about thirteen acres, with brick passenger and freight buildings, freight sheds, and engine house; and also the right to make improvements on the river fronting the same, by the construction of docks and piers, or otherwise, and a right of ferriage, for the business of the company.

The laws existing at the time of making the agreement were considered sufficient to authorize the engagements entered into; but, to avoid all question hereafter, it was deemed best to have the direct sanction of the Legislature upon the matter. By a supplement to the charter of the company, approved on the twelfth day of April last, the contracts made by the company, herein referred to, were declared valid, and the corporate powers of the company were extended over the extension between Newark and the Hudson River.

The company was placed in the possession of the road to Hoboken soon after the sense of the stockholders was ascertained, and they now operate the same under their own charter.

The supplement before referred to also provides for an increase of the directors to thirteen, being an addition of four to the present number.

Books of subscription for an increase of the capital stock of the company were opened at Newark, on the eighteenth and nineteenth days of January last, and were continued open until the sum of one million three hundred and forty-two thousand two hundred dollars were subscribed. The first two days the subscriptions were confined to shareholders or their assigns. The necessary amount not having been subscribed, the books were continued open to shareholders and others, and the above amount was subscribed.

The bonds of the company, amounting to three hundred thousand dollars, due on the first day of January last, were paid at maturity.

Arrangements have been made for issuing new bonds, to be secured by a mortgage on the works of the company, extending from the Hudson to the Delaware. It is proposed to issue three millions five hundred thousand dollars of such bonds, if that amount should be necessary to complete the improvements which the company have in view.

The present capital stock amounts to three millions one hundred thousand dollars, of which one million five hundred thousand dollars represent the present road and equipments between Newark and Hackettstown. Six hundred thousand dollars have been issued to Mr. Stevens, in part payment of the Hoboken extension; and the balance

of one million dollars will be employed in extending the road to Phillipsburg.

Of the bonds to be issued, about five hundred thousand dollars are appropriated to Mr. Stevens, in payment of the balance due for the Hoboken extension, and the proceeds of the residue will be used to pay the New Jersey Railroad and Transportation Company for the branch railroad and bridge; to purchase additional equipment; and to complete the necessary double track, machine shops, and other improvements contemplated, to make the road a first class through route for coal and other transportation.

Among these improvements, the board have seriously in contemplation the construction of a branch road from Denville to Boonton, and thence to Bloomfield. This branch would give such grades and present such other facilities as to obviate the necessity of altering the existing line, and would also accommodate a large district of country not now intersected by any railroad. The route has been carefully examined under the supervision of the most skillful engineers of the country, and offers facilities for the construction of a road of most favorable grades. By employing this branch, in connection with the western part of the main road and the Bloomfield road, a through line will be obtained, inferior to no railroad in the country for its adaptation to the immense demands, which its peculiar location, between New York on the East, the Pennsylvania coal fields on the West, and the iron mines of New Jersey, in the interior, will make upon its capacity.

The following statement shows the financial condition of the company December 31st, 1863.

Capital stock	$1,157,800 00
Funded debt	340,000 00
Floating debt	87,079 84
Contingent fund	264,746 00
	$1,849,625 84
Cost of road and its appendages	$1,674,061 41
Capital stock of the Newark and Bloomfield Railroad Company	55,000 00
Capital stock of telegraph Co	2,000 00
Wood on hand, paid for	7,000 00
Cash, and cash items	111,564 43
	$1,849,625 84

President.—Wm. Wright.

Directors.—William Wright, Jeremiah C. Garthwaite, Aaron Robertson, Joseph P. Bradley, Abram S. Hewitt, Asa Packer, Beach Vanderpool, William N. Wood, Robert Hamilton, Edwin A. Stevens, J. Couper Lord, Charles A. Lighthipe, Edmund H. Miller.

Superintendent.—E. H. Tracy.

Treasurer.—Isaac Van Wagenen.

Census of Italy.

The Italian government has just published the result of a census taken since the annexations. It contains some curious facts. The kingdom of Italy contains a population of 21,777,334 souls. It is, consequently the fifth Power in Europe as regards its inhabitants; superior to Spain, of which the territory is twice as extensive, and to Prussia, of which the area is likewise greater. Were the unity of Italy accomplished, its population would amount to 27,000,000. The average population of a commune in Italy is 2,821 inhabitants, while the average in France is only 978 inhabitants. There are nine communes in three hundred square kilometres. In France, on the contrary, there are eighteen in a similar space. The population is most crowded in the south of the island of Sardinia; it is least numerous in the Marches and in the Æmilia. Italy contains on an average eighty-four inhabitants to the square kilometer, a figure higher than that of France or Prussia, but lower than that of England, Holland, or Belgium. Lombardy and Sicily are the provinces in which the population has increased most rapidly of late years. Sardinia and the Neapolitan provinces come next. The increase of population has been much slower in Piedmont. The wars of 1849 and 1859 have tended to this result.

Connecticut and Passumpsic Rivers R. R.

The receipts and expenses of this road for the years ending May 31, 1863 and 1864, have been as follows:

Receipts:	1863.	1864.
From passengers	$78,920 55	$130,261 64
" freights	117,876 00	165,593 28
" mails	9,100 00	9,725 00
" express	2,000 00	2,416 67
" rents	970 50	852 48
	$208,867 05	$308,850 07
Expenses, viz:		
Maintenance of road	$25,048 70	$38,980 94
Motive power	25,730 90	38,081 39
Fuel	12,030 60	10,428 80
Oil and waste	1,929 46	3,258 27
Passenger department	7,628 70	9,088 38
Freight "	14,153 03	15,417 41
Losses	1,250 29	2,750 70
Repairs of buildings	4,042 21	5,928 39
Insurance	1,072 67	1,736 07
Miscellaneous expenses	1,879 39	15,749 83
	$100,769 95	$141,420 18
Net balance	$108,095 10	$167,429 89

The balance of earnings after paying interest on bonds, and $16,000 to Trustees of sinking fund, have been appropriated to the payment of the floating debt and the extension of the road. The report says:

The amount of sinking fund at this date in the hands of the Trustees, is $141,500, which is invested in the bonds of the corporation.

A dividend of ten per cent. in preferred stock was made, in March last, to holders of preferred stock.

During the past year, a substantial wooden building, 60 by 100 feet, has been erected, at St. Johnsbury, and furnished with improved machinery for repairing cars. The large amount of work to be done to keep up the rolling stock, and the high price of labor, rendered the expenditure indispensable.

The rolling stock, track and road bed, are in thorough repair. 28,757 new sleepers have been laid, 73 tons of rails re-rolled, 2,023 rails, repaired, and 20 tons of new iron purchased and laid down, during the past year.

The road was opened to Newport for passengers October 5th, and for freight October 12th, 1863. The grading is now completed to Canada line, and the rails will be laid as soon as they can be procured at reasonable rates.

The increased business furnished by Orleans and Stanstead Counties, since the extension of the road to Newport, fully confirms the opinion heretofore expressed by the Directors, that, when the road is completed and northern connections made, the earnings must be sufficient to pay satisfactory dividends; in fact, the earnings the past year are all that the warmest advocates of extension ever predicted, until a through connection was made.

The increase of through travel to Newport has been such that more hotel accommodations were absolutely necessary, both for the comfort of the traveling community and for the interest of the road; and, in order that suitable and early arrangements might be made, the corporation have nearly completed a large addition to the Memphremagog House, the proprietors of which are expected to take at cost.

The road being nearly completed to its northern terminus, (Canada line,) it is very important that we have a connection with northern railroads. Assurances have often been given of being met at the boundary line; but circumstances, probably beyond their control, have prevented, and our terminus will be twenty-eight miles from the Grand Trunk Railway, by the Massawippi route, and about thirty-eight miles to Waterloo, the present terminus of the Stanstead, Shefford and Chambly Railroad. Charters are secured for both routes, and when either or both roads are built, it will materially add to the income of all the lines between our northern terminus and Boston and New York; and it is very desirable that such aid should be rendered by all interested as will, at an early day, give us a through connection with Montreal and Quebec.

Trial Balance, July 1, 1864.

Construction	$2,842,741 51

President.—Henry Keyes.

Treasurer.—N. P. Lovering.

Orange and Newark Railroad Company.

This road is a consolidation of the Orange and Newark Railroad, 4.20 miles; the Market street, Newark, 4.90 miles; the Broad Street, Newark, 3.80 miles; and the Belleville and Newark, 3.90 miles—making a total of about 17 miles of single track road. The equipment consists of 150 horses and 22 two-horse cars. The cost of road and equipment will be, when completed, $650,000. The capital stock is $350,000, in 7,000 shares of $50 each. Bonded debt $300,000, viz: 1st mortgage Broad street, Newark, $100,000 interest 7 per cent., and matures in 1881; 1st mort., Orange and Newark, $100,000, 7 per cent., and matures in 1880; 2d mort., do., $100,000, 7 per cent., and matures in 1883. The company has no floating debt. The earnings in 1863 were $71,050; expenses $51,867; net earnings, $19,183.

☞ The Portland (Oregon) *Advocate* of the 23d of July says that a party, under the direction of Col. Barry, had been engaged for several weeks surveying a route for a railroad from California to the Columbia River.

☞ Messrs. Frederick Schuchardt, James D. Fish and Henry Morgan, have been elected members of the Board of Directors of the Chicago and Great Eastern Railway Company.

☞ Wm. H. Talcott, Esq., late Engineer and Superintendent of the the Morris Canal, has been appointed president of the company, vice Hon. Ephriam Marsh, deceased.

☞ Mr. Stephen Massett, of Van Schaick & Massett, has been admitted to membership at the New York Stock Exchange Board.

For the American Railroad Journal.

The Connecticut Valley Railroads.

One of the great series of American railways is found in full and successful operation in the valley of the Connecticut river. The Southern terminus is at Hartford, a flourishing and beautiful town. The Northern terminus is at Newport in Vermont, a port of entry on Lake Memphramagog, and the key to the Canadian townships lying between the Grand Trunk on the East and Lake Champlain and the Richelieu on the West. Relatively, Newport may become to Canada East what Oswego and Ogdensburg, are to Canada West; all these being points of contact with the Provinces, rather than entrepots like Chicago, Milwaukee, Detroit and Buffalo. As yet however the approaches to Canada East from the United States are almost entirely by the Grand Trunk, which beyond Island Pond, is biforked and carries freight and passengers to Quebec on the one side and to Montreal on the other. Between these two diverging lines, and contiguous to the populous and well cultivated country lying south of the angle made by these diverging lines, the Connecticut Valley system reaches Northward, and stops at Newport.

Here the facilities for further progress end, except as they are found in the navigation of the Lake about thirty five miles in length, two thirds of which are in Canada East. The Passumpsic Railway Company under the irresistible logic of necessity, seeing that its line is a natural outlet of the valley system, that it naturally commands the trade of the Eastern townships, and is almost now the key to Quebec and Montreal travel from the Valley, has continued its efforts to secure it, by grading an extended line of about twelve miles to the frontier, ready to complete it at the first favorable opportunity. And in this way the matter now stands.

The Canadians to whom this valley line is be coming more and more interesting and important, have already secured charters for the completion of two lines of railways which will unite with the Connecticut Valley roads, and the problem now awaits solution as to the time when, and the manner in which, the connection can be made. The rebellion, the condition of the currency, and the price of labor and materials offer at present serious obstacles to the construction of these links, but in our judgment, there are peculiarly favorable circumstance attending the projects, which in reality favor their immediate execution and which at the proper moment we are prepared to show.

Our present purpose is to allude to the condition of the railways in the Connecticut Valley, and its confluent valley of the Passumpsic, which in direction and character may be considered as one and the same. While the roadways are in excellent order, the rolling stock of the best description, and the management praiseworthy, there is notwithstanding a radical disadvantage in operating them in consequence of the number of the Companies covering the route. They are as follows:

New York and New Haven (the feeder).	76 miles.
New Haven, Hartford and Springfield...	62 "
Connecticut River.....	60 "
Vermont Valley.....	24 "
Sullivan.....	32 "
Connecticut and Passumpsic Rivers....	105 "

This last is the longest line of them all and occupies almost one-third of the whole distance. All these necessarily have separate Boards, Officers, Engineers, Workshops, rules, regulations and plans of operating and working to suit themselves. The capitals of these Companies are as follows:

N. Y. and N. Haven	$3,572,800
N. H. and Hartford	2,350,000
Connecticut River	1,591,100
Vermont Valley	516 164
Sullivan	500,000
Connecticut and Passumpsic Rivers	1,280,400
Total of share capital	$9,810,464

When the connections alluded to are made with the Grand Trunk on one side, and the Stanstead, Shefford and Chamblee on the other, or when with more directness a line is constructed between St. Johns and Newport on the one side and between Newport and the Grand Trunk on the other, nearly the whole travel between Quebec and Montreal, and New York, will prefer the line of the Connecticut Valley as being the shortest and the most direct and convenient.

Under such circumstances it appears to us that an amalgamation of the Valley companies under one head would be an immense advance in their prosperity, and give a value to their shares and securities which they never can possess under a divided management, as at present. Again, the economy of management would be greatly facilitated. Reduction of expenditure in workshops, uniformity in equipments, cost of Engines and cars, and homogeniety of interest, policy, and management would lead to vast annual savings, and as a financial measure would be one of immense importance.

On the other hand the public would be greatly benefitted by the simplicity of the working arrangements, be spared the misunderstandings, mistakes and delays continually occurring where various lines control the routes, absolutely and without reference to the whole, and which continually lead to complications and errors, and require constant changes of time tables, and hours of departures and arrivals. That it will come to this in the end we have no doubt. The New York Central amalgamation arose out of similar circumstances and similar necessities, and the arrangement has given it firmness, power and credit which it never could have attained as it was, composed of many fragments each having a value by itself, but each having a separate interest.

If we look on the map of the Northern States we will perceive that there are certain natural routes and tendencies of travel which create trunk lines. The New York Central is one of them, the Erie is another, the Atlantic and Great Western has also followed the instincts of business, and may be considered another. The Harlem and Hudson River give a direct line to Canada on the West, and the Connecticut Valley is the only long, straight trunk line East in all New England, with absolute and defined termini, and purposes on a large scale.

It only wants consolidation and a unity of head to rise to the first class of Trunk roads.

The formation of an amalgamated company would require legislation as it did in the case of the Central, and some careful calculations as to the value of the lines to be amalgamated, but when completed, the shareholders in the new Company would find they held property of the most stable and productive character, which would survive all the political dangers of the times, and even a possible discredit of the National funds.

The only possible objection to the measure is to be expected in the personal interests of the different managements of these lines, as was recently admitted to us by a prominent officer in one of the Companies. But the interests of the shareholders are stronger than those of any individuals connected with the management, and will finally prevail. So also the advantages to the public of a more simply regulated route, a shorter one, and a closer connection with a foreign country with a large and increasing trade, will be too apparent and certain, to allow of a much longer delay in the re-organization of the system of the Connecticut River Valley.

New England Agricultural Fair.

[ADDRESS OF GOV. ANDREW.

We give below an extract from the address recently made at the Agricultural Fair in Springfield, by Governor Andrew of Massachusetts. It is an eloquent defence of the New England States, their resources, industry, social and agricultural condition and progress, their educational institutions, and their zeal in support of opinions which they believe to be right. It is a production honorable to the writer, and the constituency which acknowledge him as their constitutional chief:

Let us remember for a moment the external picture of New England, as she presents herself to the eye of the economist and the thoughtful agriculturist, comprising the six States or Commonwealths of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut. Her area covers something more than 65,037 square miles, or nearly forty-two millions of acres of surface.

Of these acres Maine possesses 20,330,240, of which only 5,700,755 acres are reckoned by the census of 1860 as land included in farms; while again, of that number but 2,677,215 are classed with "improved lands."

New Hampshire contains 5,939,200 acres; her farms including 3,744,630 acres; while her improved lands are but 2,367,039 acres.

Vermont contains an area of 6,535,680 acres, of which 4,160,839 are reckoned as land in farms, but of which quantity, again, but 2,758,443 acres are returned as under improvement.

Massachusetts covers a surface of 4,992,000 acres, of which 3,183,212 are included in farms, while but 2,155,512 acres are classed among improved lands.

Rhode Island possesses 519,698 acres of farms, out of her 838,840 acres of area, but of these acres 329,884 only are reckoned as improved lands.

Connecticut has 2,991,369 acres, with farms to the extent of 2,504,263, but her improved lands are stated at 1,830,808 acres.

Thus of the whole area of New England, only 12,118,902 acres, or three and five-tenths per cent. of her surface, have yet been brought within the category of improved land. With a popuation of 3,135,293 persons, on a soil reputed to be sterile, in a climate often styled unkind, New England had in 1860 accumulated an aggregate of wealth invested in her lands, railroads, mills, shops and the various products of ingenuity and taste which indicate the industry and wealth of a highly cultivated and favored people, amounting in value to not less than two thousand millions of dollars. While she has contributed, according to the latest census, 560,336 of the sons and daughters native to her soil to swell the populations of other Commonwealths, outside of New England, and has invested of her earnings, as she has scattered her children, in every State, on every waterfall and in every mart and mine and enterprise of industry.

Were her population to the square mile, equal throughout to that of the Commonwealth of Mas-

sachusetts, whose soil, as a whole, is the least fertile of the six States, she would rise to the number of ten and a quarter millions of souls, which, with a corresponding increase of wealth, would present an aggregate of real and personal values equal to more than seven thousand millions of dollars. When we remember that the increase of wealth has constantly far outrun the growth of population, we have before us the prospect of a numerical strength and economic thrift, as the reward of our intelligent pursuit of industry, capable of an expansion not yet to be measured, which permits to New England a proud and powerful place in the history of our national future.

The diversity of the pursuits to which her people are devoted, is not only manifold but universal, including all the varieties of industrial enterprise, extending in all the directions of human action and human thought. Possessing all the features and peculiarities, over a large portion of her domain, of a rural life, her people are not only farmers or husbandmen, but they lead the rest of the country in the perils of the seas as fishermen and whale hunters, they furnish seamen to the navy and the mercantile marine in large disproportion to their numerical masculine strength, plant on all their waterfalls, manufactories of cotton and wool, establish in every village the shops of artisans of every handicraft, build ships all along our coast, fabricate arms of all kinds and calibres, heavy ordnance and iron-clad vessels of war, and make jewelry and instrments of music, as well as anchors, steam engines, hats and shoes.

They raise tobacco in the valley of the Connecticut and in other genial soils, as well as Indian corn, vegetables, hay and forage, all over New England. Not only ice and granite, but even sugar becomes a part of her production, and is a profitable source of gain as well as comfort or luxury. She has rendered the railway a domestic institution, so that the steam car visits nearly every hamlet and every considerable town. The music of its whistle no longer frightens the farmer's horse, nor does the proximity of the thundering locomotive, raging and sighing under its heavy burden, and with the pressure of its fiery spirit, disturb the equanimity of the anxious matron, careful for the safety of her child.

The needle-woman, by the domestic hearth or in the shops where labor associates with capital, aided by the sewing-machine—one of the last best gifts of mechanical invention to women, if not to men—the weaver, by the side of her carpet-loom, which seem to think, as well as work, and which almost talks; the shoemaker, pegging a boot at a blow; the laborer, who fills his gravel-car by two strokes of a steam shovel, and upsets it by a turn of his hand; the husbandman, who mows and rakes his hay, and reaps, and threshes, and measures out his golden grain by the agencies of cunning mechanisms, almost without fatigue, are only a few of the thousand illustrations of how the human will, and the immortal intelligence of the human intellect, bridging over the gulf which lies between the boundaries of matter and mind, are vindicating the divinely given mastership of man over all the things which God hath made on earth.

Nay, more than that; for the things invisible and impalpable existing as hidden forces in the vast abyss of nature—caloric and steam and electricity and magnetism, and light itself; the mysteries of sciences so wonderful and august that they seem to tread celestial spheres and to sweep the mind bewildered by the contemplation off far beyond the domain of knowledge or of reason—these, all these, tamed and allured to human uses, are familiar spirits by whose means a thousand miracles are wrought, without amazement to the beholder and with little consciousness of our own how nearly are we brought to the contemplation of the very thoughts of Diety.

Those winged horses harnessed to the plow, the loom, the traveling car, carrying burdens, crushing ores, hammering granite and iron, or weaving delicate tissues for ornament or luxury, or flashing intelligence by invisible magic, are daily augmenting in number and power—though they had long since added mechanical forces to the industrial strength of our New England, equivalent to that of many millions of men.

Besides all this, there are the peculiar advantages of neigborhood or contiguity, derived from compactness and from convenience of transportation, whether found on the shores of the sea, in the flow of rivers, or in artificial highways.

Her long, continuous seacoast line, wtih its many harbors, stretches from Calais all around to the Hudson. Her rivers generally not navigable far inland, to be sure—such as the Penobscot, the Kennebec, the Merrimack, the Connecticut, the Blackstone, and a hundred minor streams, but still beautiful diversifications of the landscape, have all contributed beyond human estimate to her development. They have floated the hemlocks, oaks and pines from interior forests to the sea. They turned the mill and ground the corn for our fathers in the early humility of their worldly fortunes. The rill tinkling down its rocky declivity, or our Androscoggin roaring along precipitous descents, have alike summoned or allured laborers and capitalists to settle along their banks, where, in happy union with the flowing waters, they have created wealth, builded cities, and piled up acquisitions from every source of ingenuity and art.

And what variety of landscape is yours! If winter is rugged and severe, it is yet bracing and grand. Can a people become monotonous and sluggish in their thought who must toil betimes to shelter themselves from its power, but who are yet encouraged and warmed by the tropical heat of our midsummer weather, and are charmed by the soft temperatures of our verdant Junes and our rich and golden Octobers? Can a people become indifferent to the influences of beauty discerned and felt, either in the sweet repose of nature or in her sublimer glories, to whom are familiar the landscapes of Lakes George and Champlain and the Moosehead; the valleys of the Deerfield, the Connecticut, the Housatonic; the White Mountains, piled in ragged variety of projecting rocks from fertile levels up into eternal hights of snow; the rich allurements of the Green Mountains, the delicious surprises of Berkshire, the great and sphynx-like capes, and the boundless, soundless, mysterious ocean which they strive to penetrate; whose inward ear has heard the windharp of the forests, the music of the waterfalls, and the bass of the everlasting sea, whose tides beat time in the ceaseless anthems of creation?

The remainder of this address is a vindication of the policy, conserving influence, and sound principles of the people of Massachusetts especially; their past history, their love of learning and the fostering care they have exhibited for their Universities and Schools, commends their agricultural and industrial advancement, and their attachment to the Union and the institutions of their forefathers. The address places Gov. Andrew in the first rank of American speakers and thinkers, and the people of Massachusetts may be proud of the man who so ably comes to their rescue, against popular and often unjust prejudices.

Boston and New York Air Line Railroad.

The further extension of the Air Line Railroad from Woonsocket to New Haven has been contracted for, and through traffic from Boston to New York is expected to commence by this road in the course of two years. The completion of the contract, which has been with Messrs. Daniel N. and J. C. Stanton, will form a junction of the Boston and Woonsocket and the New York and New Haven lines, by a double track along the whole distance where there is now only a single one. The arrangements also include the continuation of the line from Brookline into Boston—probably to a point contiguous to the depots at the North End. The entire length of the line between the Boston and New York termini will be 135 miles—and consequently one hour's time less travel between these points than by any other line. It will also, for a great distance, intersect districts now destitute of railroad facilities—a very important element in the improvement it will constitute.—*Boston Com. Bulletin.*

New York Canals.

The quantity of flour, wheat, corn and barley left at tidewater from the commencement of navigation to the 31st of August inclusive, during the years 1863 and 1864, was as follows:—

	Flour, bbls.	Wheat, bushels.	Corn, bushels.	Barley. bushels.
1863.....	725,000	10,567,100	14,665,100	73,700
1864.....	556,200	9,933,300	5,537,200	166,100
Decrease .	168,800	633,800	9,127,900	*92,400

* Increase.

By reducing the wheat to flour, the quantity of the latter left at tidewater this year, compared with the corresponding period last year, shows a deficiency of 295,560 bbls. flour.

The following comparative table shows the quantity of breadstuffs left at tide water from the commencement of navigation to and including the 31st of August, in the years indicated:

Canal opened	May 1, 1862.	May 1, 1863.	April 30, 1864.
Flour, bbls.....	840,500	725,000	556,200
Wheat, bushels..	15,129,600	10,567,100	9,933,300
Corn, bushels...	10,829,500	14,665,100	5,537,200
Barley, bushels.	373,100	73,700	166,100
Oats, bushels....	2,167,700	5,099,200	4,979,200
Rye, bushels....	521,500	252,200	80,900

Interest and Dividends.

The Lehigh Valley Railroad Company has declared a quarterly dividend of 2½ per cent., payable on demand.

The Philadelphia, Germantown and Norristown Railroad Company have declared a dividend of 4 per cent., clear of all taxes, payable October 3.

The Wyoming Valley Canal Company has declared a dividend of 4 per cent., payable on and after the 21st inst., free of State and United States taxes.

Coupons due October 1st, of the Rhode Island State bonds, will be paid on presentation at the American Exchange Bank.

Coupons due 1st October, 1859, on the extended 10 per cent. bonds of the New Albany and Salem Railroad, and the coupons due 1st November, 1859, on the extended 8 per cent. bonds of the same road will be paid on the 15th inst., less Government tax, by the Farmers' Loan and Trust Company.

The Steubenville Railroad.

The work on this important line of railway is progressing favorably under the auspices of the Western Transportation Company, (or, in other words, the Pennsylvania Railroad Company,) it is expected that the road will be in running order by the first of January next. The grading is completed, and nineteen miles of rails have been laid from Steubenville eastwardly. The bridge over the Monongahela River will shortly be completed. The masonry is finished, and the superstructure is progressing steadily. The work on the great tunnel through a portion of the Third Ward of Pittsburg, to connect the Steubenville with the Pennsylvania line, is being pushed forward most vigorously, and will be ready for the rails in due time.—*Pittsburg Post.*

☞ The valuation of Worcester this year is $16,382,800. Real estate has increased over $500,000 since last year. The valuation of personal property is nearly $800,000 less, which is accounted for by the fact that the assessment of stocks the present year is made by the State instead of the city as formerly, and therefore the amount of the amount of these does not appear on the assessor's books. The tax is $13 per $1000.

Saturday, September 17, 1864.

Stock Exchange and Money Market.

The condition of the money market has been much disturbed by the fluctuations in the price of gold. As we have predicted, and from no foresight whatsoever, but from appreciation of cause and effect, it has gone down to the low figure which we named for it, even after it recovered from a heavy previous fall. When our imports are falling off, and the want of gold to meet custom house duties is not by any means large or pressing, when in fact it does not pay to export gold at all as a commodity as may be observed from the quotations not only in New York, but on the London Exchange; and when the war is evidently drawing to a close, since it is admitted on all hands that the Union is to be preserved, even by those who talk most about peace, (and this is an indication of what is inevitable which the South itself is beginning to understand,) and finally when our military successes on the one hand, and the enormous amount of daily voluntary enlistments filling up the ranks of our armies on the other, vindicate the cool yet determined purpose of the people to conquer a peace, it is in vain for speculators in gold to mystify, or muddle up the question any longer. A decline must take place or the whole world has gone mad.

The fluctuations in the prices were during the past week quite remarkable. On Tuesday the price had fallen to 218, and it is said to 213 among outsiders. From this there was a recovery to 220, owing to the pressure of the market on the shorts. We have scarcely patience to record such transactions. Here are examples where men choosing to gamble in an article, which many of them rarely see and more rarely handle, put a price on it for delivery, at a certain day. The day comes and it cannot be delivered at the price fixed. The party to deliver has to pay whatever the holder or speculator asks for the article needed, and the contracts of the shorts are so studied, watched and understood, by the leading operators, that they almost know before hand how much the market will or will not require, and act accordingly. But even these men do not care about holding gold forever, and are turning it into currency. When gold is on the decline they will get rid of theirs, and then cheapen it as much as possible. And this is precisely how the market was treated, and the decline commenced the other day. An enormous amount was put on the street by a heavy operator for foreign account, which foreign account has been very active in our financial disturbances. These operators having had a very good time hitherto have no further desire to hoard or control a commodity which may lose half its purchasing or exchangeable power in a single hour. An article which a few weeks ago was 60 per cent and more, higher than it is now, and is still 100 per cent higher than it should be in its normal relations is a dangerons one to have much of "in the house." One more decisive battle to place Richmond where Atlanta is, would settle the military and financial difficulties which have followed the administration for the last four years. And the knowledge of this has its effect on the men who stir up the money market, and are now auxiliaries in bringing the gold fever to a termination. And finally as to this question, when we see our exports increasing, our imports decreasing, when the demand for gold for foreign shipment has fallen off to an inconsiderable amount, and when under any circumstances, exchange either as valued in gold or currency will not pay for remitting, we can only repeat our impressions or rather our convictions that gold must continue to decline, until it assumes its real representative character in relation to currency. It has been found in past years that one dollar in gold could for all commercial purposes carry three dollars of paper, and our whole Banking system is or rather was carried on upon that basis.

So that if our specie on hand, and what is standing to American credit abroad, placed there through fear or policy, and that, we are now beginning to receive direct from California under the plan of Mr. Chase adopted by Mr. Fessenden, one third of the currency of the country, gold and paper should be alike par of each other, and

just as the amount of currency exceeds that proportion of 3 to 1, so does paper depreciate, or gold appreciate in currency. It is therefore believed that gold should not bring today at the utmost more than 125. And there is, where it should go to protect the people from those smaller operators, no better than those in the street, who in the confusion of the gold market make the most rapacious assaults upon the pockets of consumers without the least justification or honesty.

Let us analyze this process a little. The cost of the necessities of life has pressed largely of late upon the people. Liverpool coal has been sold at $30 and still brings $28 being nearly double of what it was sold for, the last season. Can any one give any good, or plausible reason for any such difference. There is none to be given whatever except the price of gold and its effect on exchange, but this will not make the whole difference. One barrel of flour at currency prices this day will purchase a chaldron of Sydney coal which is quite as good as Liverpool. There is no duty under the reciprocity act on either of these articles, and the cost to be added to the purchase or barter of these articles is only the freight and ordinary charges of handling and delivering. Is there any person who will assert that this chaldrom of coal is worth $30 in this city, and yet the public is continually exposed to the imposition. So too the article of beef. The owners of the best cattle get but 8 or 9 cents a lb. for them, and yet before these get to the consumers' mouths in the usual cuts, the price per lb. is from 25 to 30 cents. This too is under the barometrical indications of the gold market.

It is to be observed that there is not a corresponding fall. Vast amounts of property are actually suffered to rot and decay on the hands of the dealers, rather than sold at a reduction in price, because gold is up, and as much may be obtained for what is left of the perishable article as if the whole had been sold at a moderate price. A heavy fall in gold is the only hope of the public against these forestallers, who having a business which is favored by such derangements in currency, take every possible advantage of it.

As friends of the people therefore and of the Country we rejoice to announce a fall in gold, and to express the opinion that things considered, military and financial, as well as the policy of the Treasury which is to reduce circulation as much as practicable, there must be a continuous decline, notwithstanding there is a little rebound, between each fall, as there is in all elastic bodies. The ball thrown from the boy's hand upon the pavement, rebounds again and again till its momentum is exhausted, rising after each fall a little but less every succeeding time. Nothing but fresh power imparted to it by the player can send it up to its original altitude.

The Treasury loan has been subscribed very largely in excess of the sum required. As nearly as we can ascertain, the offers were as much as 70 millions and at a price or premium which fully justifies Mr. Chase's conduct in regard to this very loan in that particular, when he adhered to the determination not to take anything under 104.

It has been stated that the Treasury will get no money under this loan, but interest notes which must be cancelled on receipt, and cannot be reissued. We understand that the quantity of these notes likely to be paid in will not be large, inasmuch as they are actually wanted and used as currency by the banks, the principal holders, and also that these notes can be reissued at pleasure within the limit of the law.

The readiness and the patriotic spirit which have been shown by capitalists and the people generally, in regard to this loan are most significant of the real condition of our affairs, and of the entire confidence which they feel in the approaching result. A rumor has been set in circulation, that the Secretary of the Treasury was about putting another large loan on the market. This is officially contradicted by recent advices from Washington, while another statement accompanies it which we hope is really true, viz., that the proceeds of the late successful loan are to be exclusively employed in paying off our war worn veterans in the field. Money is active and the rates are still high. Twelve per cent. is still asked and obtained for ordinary commercial paper. Railway securities are firm but not the subject of much excitement, while recently there has been some desire shown to press shares upon the market at a reduction from former quotations. Nevertheless the roads are all doing well, managing their affairs skillfully and economically, and doing more business than ever. All travelers the last two months have observed the immense crowds which have been found on all the railway trains in the Country. Even the short lines, without any other than local traffic have increased their receipts by at least one third, the present season. This increase is strongly shown in the great lines as will appear by our reports of the monthly and weekly earnings of the last month.

The balance in the Sub-Treasury on Tuesday was $20,515,231 04. The aggregate exports of produce and merchandize for the week ending the same day were $5,134,988 against $3,112,397 same week last year.

The value of foreign goods imported into the port of Boston for the week ending September 9, was $858,645, against $650,202 for the corresponding week in 1863. The exports were $443,163 against $507,197 for the corresponding week in 1863.

The foreign exports from the port of Baltimore during the past week were valued at $146,271.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Hoffman Insurance Company.

We invite attention to the advertisement of this company. It has a cash capital of $200,000, all paid in. Has been in operation four months, and shows a surplus of $20,000.

☞ Geo. T. M. Davis, 47 Exchange Place, has for sale 2 locomotives and 20 platform cars of the ordinary gauge. Also, 450 tons street rails, Philadelphia pattern, and 2,300 tons 50 and 57 lb. English rail.

Central Ohio Railroad.

At a meeting of the stockholders of this company recently held at Zanesville, Ohio, the following gentlemen were chosen directors: H. J. Jewett, Geo. B. Wright, Wm. Dennison, D. W. Deshler, J. Wm. Baldwin, Frank Dunlevy, S. R. Honner, D. Applegate, C. C. Goddard, Isaac W. Hall, David McCortney, J. Dew Wright and Walter Brooks.

At a subsequent meeting of the board, the following officers were elected: H. J. Jewett, President; Geo. B. Wright, Vice President; Daniel Applegate, Treasurer, and Wm. Wing, Secretary. The president read to the stockholders present, a very full and satisfactory report of the operations of the company for the fiscal year, together with a history of the successful negotiations for reorganizing and capitalizing the debts and stock of the company.

Catawissa Railroad.

The Catawissa, after a series of financial troubles during the past fifteen years, is in common with many other of the railways of the country, assuming a reliable financial basis, by the discharge of its floating debt, and the ability to pay dividends from the increased prices and business, as now developed. Its first dividend was paid in August of this year; during the first eight months of 1864, the earnings have been $245,059, against $199,207 for the same period in 1863, being a gain of twenty-three per cent. The opening of the Philadelphia and Erie Railway in October, will create considerable traffic, passengers and freight, that must pass to and from the Catawissa, which in addition to the development of the trade of the country, will provide business enough, under prudent management, to compensate by dividends the long expectant stockholders. The lessees of the company's coal property report that they will be prepared to ship their first coal within sixty days, and that during the next year they will be able to mine and deliver to market from one to two hundred thousand tons of superior coal, upon which the company receives mining royalty, in addition to transportation charges. A large proportion of this coal will be moved as back loading to the Lakes and northwestern part of the State, to fill empty cars used eastward in moving western produce over the Catawissa road and its connections, to supply the coal regions and other markets of the East.

Central Pacific Railroad.

The Supreme Court has decided that the City of San Francisco must issue bonds for $400,000 in aid of the Central Pacific Railroad. This aid will give the road a great impetus.

☞ The Morris and Essex Railroad Company will receive proposals until the 27th inst., for $1,000,000 of their first mortgage 7 per cent. bonds of $100, $500 and $1,000 redeemable in fifty years, with coupons payable in New York, and provision for a sinking fund for their redemption at maturity. The bonds are a portion of an issue, the whole amount of which is $3,500,000 and are offered for sale for the purpose of extending the road from Hackettstown, the present terminus, to Phillipsburg, opposite Easton, and for building double track, furnishing rolling stock, reducing grades, constructing branches, &c. When extended, this road will make a close connection with the Lehigh Valley Railroad, and will become one of the most important avenues for the transportation of coal from the Lehigh region to New York, and will also form a part of the great through line to Cincinnati and Chicago, and the Great West generally, *via* Lehigh Valley, Allentown, Pennsylvania, and Pittsburg, Fort Wayne and Chicago Railroads. The bonds are secured by a first mortgage upon the road of the company, completed and in the course of construction, from the Hudson River at Hoboken to the Delaware River at Phillipsburg, and other extensions in contemplation, including all rights, real estate, equipment and other property.

☞ Preparations are being made for the early construction of a railroad between White Plains, N. Y., and Brookfield, which will connect with the Harlem and Housatonic railroads at those points.

☞ The receipts of the Philadelphia, Wilmington and Baltimore Railroad for July were $222,732 28, against $239,204 04 in July, 1863. For about one week in July the through travel was almost entirely suspended during the repairs after the rebel raid, and for a week after the receipts for passengers and freight were light. The actual loss to the road from this source is estimated at $40,000 to $50,000.

☞ Books of subscription to the capital stock of the Connellsville and Southern Pennsylvania Railroad Company will be opened at Bedford on the 12th of October.

☞ A meeting of the stockholders of the Union Pacific Railroad Company will be held at the office of the company, 18 William street, this city, on 3d of October.

☞ Certificates of shares to which stockholders are entitled by reason of the consolidation of the Beaver Meadow and Penn Haven and White Haven Railroad, are now ready for delivery.

☞ The coupons of the first mortgage bonds of Vermont Valley Railroad Company, due October 1, 1858, will be paid from Sept. 10th to Oct. 10th, from 11 a.m. to 2 p.m., at the office of Alex. Hamilton, Jr., 41 Wall street, N. Y., and thereafter only at the office of the treasurer at Bellows Falls, Vt.

☞ A table giving a list of one hundred and two oil companies, with the capital stock, the number of shares, the prices asked, and bid, and the dividends declared, is published in the Philadelphia Commercial List. The nominal capital of these companies exceed fifty-two millions of dollars. Of the whole number of companies only twenty-four have declared dividends.

☞ Ground has been broken near Greenough's Pond, Yarmouth, Mass., for the construction of the Cape Cod Central Railroad.

Honors to Mr. Brydges, Manager of the Grand Trunk Railway.

A complimentary demonstration recently came off at Hamilton, Canada East, made on the part of its citizens to Mr. Brydges, the manager of the Grand Trunk Railway, and just now particularly conspicuous for his skilful combinations of various railway interests in Canada and the United States, and his success in the project of the International Bridge across the Niagara River, one that owes to him if not its inception, yet its present promising condition. This demonstration took the form of a lunch, accompanied by speeches and toasts. The Hon. Isaac Buchanan, the veteran statesman of Canada West, presided, assisted by Mr. Brown.

The chairman on coming to the principal sentiment to be drank, "Prosperity to the Grand Trunk Railway, and the health of Mr. Brydges," said this was not a political meeting, and he presided merely because he was President of the Board of Trade of Hamilton. The Grand Trunk was now extended to that place, and its advantage in securing the outlet for the trade of the West on Lake Ontario was incalculable. He regretted the conduct of the Great Western in regard to the Buffalo and Lake Huron, the Preston and Berlin and the Hamilton and Port Dover roads. Hamilton now having a connection with a railway transporting produce from a far west to a competing water, could transport it with more speed and less

expense to Boston or New York, while it had also the choice of the St. Lawrence to Europe. He remarked that—

"It has been popular to decry the Grand Trunk Railway, but the parties who do so are intensely ignorant of what they are speaking about. It has been a bad think for its shareholders, but a good thing for the country and every person in this country. The increased value it has given to the land alone is worth a hundred times the money advanced to the Grand Trunk by the Province, and the other advantages which it and the Great Western have conferred on Canada are quite incalculable. The Grand Trunk has now fourteen hundred miles of road in operation, and, to show the influence with which we connect ourselves in getting associated with the Grand Truuk, I need only mention the fact that this great railway owes to English capitalists as much as the Province does—about seventy millions of dollars."

Mr. Brydges, who rose amidst enthusiastic cheering, replied at some length and in his happiest manner. Expressing his personal regard for the city of Hamilton where the majority of his children were born, he proceeded to remark that by the consummation of the arrangements between the Grand Trunk and the Buffalo and Lake Huron, Hamilton had been brought into practical connection with the former, and its merchants are now able to send their goods by means of that railway. Surveys have been directed to ascertain the condition of the line between Hamilton and Caledonia, and to put it in working order, and the time is not distant when in a Grand Trunk car he would come directly to Hamilton. Mr. Brydges explained the relations between the Grand Trunk and the Great Western, and said the former did not adopt its present course until the latter had absolutely refused to negotiate. He looked forward to the time when Toronto, Guelph, Stratford, London, Sarnia and Windsor would have two outlets for their produce and inlets for their goods. He entered pretty fully into the nature of the relations of the Great Western, its attempts at competition and reduction of rates, rather in a style of defence than aggression, and claimed for Hamilton that it would always be a great point for the wholesale business of Western Canada, and that it was of the greatest possible importance to it to have an inlet by the way of Caledonia with the whole system of the Grand Trunk, with the Buffalo and Lake Huron district, the great city of Buffalo and the markets of the Eastern States. Mr. Brydges concluded his remarks as follows:

"I believe you are all aware that it is the intention of the Grand Trunk and Buffalo and Lake Huron Companies to have completed as rapidly as the International Bridge can be put in operation, a third line of rails along their whole distance from Buffalo to Detroit, which will enable cars to be loaded in Boston or New York, and taken without change to any point on the Buffalo and Lake Huron Railway. I see no reason why the facility which will be afforded to that portion should not be extended also to Hamilton, and I think if we laid a third rail also, by the time the bridge is completed upon the line between Caledonia and Hamilton, you would find a great advantage in having your cars loaded at New York and Boston, and delivered almost at your own doors in Hamilton. These, sir, I believe will prove to be very important advantages, which will result alike to the railway companies and to the City of Hamilton, because, as I have lately said, and I say it with all sincerity, I believe that no railway or large institution of any kind can prosper without it carries with it the good feeling of the country in which it is. Unless there is a unity of interests, and unless it is felt that the one is aiding the prosperity of the other, they will never succeed in achieving those results they ought to do. I again thank you, Mr. Chairman, most warmly and most sincerely for the kind manner in which you were good enough to propose my health, and you, gentlemen, for the way in which you received it."

The affair went off very satisfactorily to all present; and Hamilton, now connected with both lakes, is considered to be to Upper Canada, what Montreal is to Lower Canada, being like her at the head of a sea going navigation. It is to be hoped our Canadian friends will not forget in their efforts to obtain the American traffic for their own railways, the respect due to the cause which is now at stake; and is upheld by their best and most profitable customers.

Construction of Railroad. Acquiring Land. Return of Appraiser.

The case of the Cleveland and Toledo Railroad Company against Prentice, was an appeal by the Company from a judgment of ejectment from a piece of land 100 feet in width, which had been taken by the company under proceedings authorized by the laws of Ohio as a part of its roadway, it having been previously owned by one Pratt through whom Prentice claimed title. The instrument of appropriation filed by the company in the office of the clerk of the common pleas of Lucas County, February 28, 1857, described the land intended to be appropriated, as follows: Fifty feet wide on each side of said railroad, as last surveyed through sub-division lots Nos. 1, 2, 3 and 4, of fractional section No. 1, of township 10, south of range 7 east, commencing on the north bounds thereof; thence westerly and southerly on and near the northerly bounds thereof to a point in the west line of said No. 4, near the northwest corner. Also lots Nos. 11, 12, 13, 14 and 15, (the lot in question), etc., "of the subdivision of river track No. 87."

On March 4, 1857, the company published notice to Piatt, stating the substance of the instrument of appropriation, and giving the description of the land as above. On April 21, 1857, upon the application of the railroad company, appraisers were appointed, and a warrant issued. The following is a copy of the return of the appraisers:

In lot *fifteen*, subdivision of river track 87, in the 12 miles square reserve, at the foot of the Rapids of the Miami of Lake Erie, 64-100 acres. Value of land appropriated, $25.60; Damages, nothing; Benefit to owners; $25.60; Amount to be paid to owner, nothing."

April 22, 1857, the railroad company took possession of the land, immediately after the appraisers made their return and proceeded to construct its railroad thereon, and thereafter remained in possession of the same, using it for the purpose of its road. Of all which Prentice and Maddocks had full knowledge when they bought of Piatt.

The railroad track had been staked out and surveyed prior to April 1857, but when, does not appear. A plat of the road was recorded in a book of the company, under date of November 15, 1857. When the plat was made is not shown.

Sutliff, C. J.—The plaintiffs below in support of their claim to recover the lands in question, showed by their proof a conveyance to them on the 23d day of October, 1852, of lot No. 15, by Robert Piatt, who held the title at the time of the location of the railroad, and who, it is admitted, continued to hold a perfect title at the time of executing his deed, unless divested of the land in controversy by the proceedings of the railroad company, as stated. If, therefore, at the time of institution of the action below, (February 18, 1854,) Piatt had he made no conveyance, could have recovered the land from the company so occupied through lot 15, as their road track, then and in that case Prentice and Maddocks, his grantees, were entitled to recover; otherwise they were not. The defendant below relied upon the proceedings of appropriation which it gave in evidence to show the lands appropriated as a railroad track on the 21st of April, 1851. And it seems to be conceded by the defendants in error that with one exception those proceedings were regular, and that all the steps were therein taken to operate as an appropriation.

But it was objected by the plaintiffs below that the description of the land intended to be appropriated by the proceedings was too vague and uncertain to admit of the proceedings being operative to appropriate either the lands in question or any other lands. It is insisted by the plaintiff in error that the description was sufficiently certain, and in fact, embraced the lands in question, and that the district court, therefore, erred in not regarding the lands legally appropriated by the company for its road track through said lot No. 15. In the case of Hicks *vs.* Fish, which was an action of trespass *quare clausum fregit*, and plea that the *locus in quo* was a highway, it was held by Judge Story that a highway, to be legally located, "must have some definite location and boundary." And so in that case it was held that part of the description from a point "even with the south end of the *great pine swamp, and from thence, as it may be found the most convenient way to the highway at the north end* of the pond commonly called Little Pond," was void for uncertainty.

And so in the case of Hinckley *vs.* Hastings, in a like action and defence, it was held that the following description of the street was insufficient for uncertainty. "A street at least forty feet wide shall be opened on the east side of the land purchased by them, which will be in a straight line with Blossom street," etc., in as much as in that case the proof showed that it would be impossible to lay out such a street on the east side of said lands, and at the same time, "in a straight line with Blossom street." But in both the foregoing cases it should be remarkable that the action of trespass was for acts done in opening the road.

The authorities will be found, I apprehend, less strict in requiring definite descriptions of road, where the question is not made until after the road has been opened and in use, than in those cases where the question as to the *locus in quo* has been raised *in limine*, before the road has yet been opened and in use. This remark, doubtless, had its application in the case of Atlantic and Ohio Railroad Company *vs.* Sullivan *et al*, 5 Ohio St. Rep. 276, to which we are also referred by counsel for defendants in error. For in the case of Callenden *et al vs.* Painesville and Hudson Railroad Company, 11 Ohio St. Rep. 516, a description not less vague was held sufficient. And the charters referred to in the latter case show, very clearly, that descriptions less definite than that of

the Atlantic and Ohio Railroad case, have, from very early legislation upon the subject, in this state, obtained more or less extensively, and without having their sufficiency questioned on the ground of want of certainty.

The case of Vail *vs.* Morris and Essex Railroad Company, (1 Zabriskie, 191) to which our attention has been particularly invited by counsel for defendants in error it is true, was a case like the one at law, which involved the validity of an attempted appropriation of lands; and it was there, as here, objected to the validity of the appropriation, that there was a fatal want of certainty in the description. But the record in that case showed only the following description in the notice to the owner, "that an application will be made to assess the price or value of the land owned by him, over which said company has located its branch road from their original road to Dover, and the damages which the commissioners are authorized to assess. And the court in that case say: "This is the whole specification upon the face of the proceedings;" and adds, "The act of incorporation requires that a survey of the route of the road shall be deposited in the office of the secretary of State. To that source the landholder would naturally look for information as to the extent of the claim of the company, and the manner in which his rights were to be affected." The survey presented in that case, on the "paper," the judge adds, "is a mere specification in figures of the course and distance of the survey, without a designation of the lines of lands or reference to a single monument from the beginning to the ending point. It gives no information whatever as to the location of the road upon his land, nor can he ascertain it except by a survey of the whole route." And the description of the property in that case was certainly insufficient, of itself, as held by the court to enable the owner or appraiser to know what land was to be appropriated.

But how is it in the case before us? As we have seen our statute authorizes the company to "enter upon any lands for the purpose of examining and surveying its railroad line, and appropriate so much thereof as may be deemed necessary," etc. In this case the notice mentions the survey as having been made, as the statute evidently contemplates it should be, before the proceeding to appropriate. The description in the notice is as definite a description of a surveyed railroad track as could well be made; and if the survey had, in fact, been made, such a description in a deed would be even more certain than could be expressed by courses and distance; and would be, beyond doubt, a sufficient description in the deed of conveyance to pass the title in the railroad track to the company. But the record only shows that the road bed had been surveyed and staked out previous to the 1st of April, yet the return of the commissioners that they had viewed and appraised the lands described, and giving, as they do, the precise quantity of land, clearly implies that they found the roads surveyed as described in the notice. Indeed, we do not understand counsel to insist particularly upon the want of certainty at the time the appraisers made their view and appraisal on the 21st of April. But it is insisted that the plaintiffs in error did not, on the trial below, make proof that the road bed was, in fact, surveyed and staked out on the 28th of February, or on the 4th of March 1857, at the time of applying for the appropriation and giving notice to Piatt by advertisement. To this objection, we think, the defendant below might well have claimed, under the law and circumstances of the case, that after the proof of so much by the company in support of the defence, the burden of proof was reasonably shifted upon the plaintiffs below to rebut the presumptions in favor of the title of the company, arising from their proof. Indeed, it may well be questioned whether a survey made, and monuments set along the land to be appropriated, as described in the notice, as early as the 1st of April, would not have been sufficient. But in this case, from all that appears upon the record, the reasonable presumption would be that the petition correctly described the land as then surveyed. The proof, it is true, is not positive that the survey was made as early as prior to the 1st day of March, but it is certain that the survey was made prior to the 1st day of April; and there is no proof or circumstances tending to show that it was not in fact made, as recited in the notice, at the time the notice was given. It certainly is not an unreasonable presumption, after proof of the fact that a road or canal had been surveyed and staked out, that when worked and in operation as a public thoroughfare, without any objection to the *locus in quo*, it should, if afterward questioned, be presumed to have been opened *where* surveyed and located. And more especially is such presumption clear, in such a case, where the stakes or monuments set are, after its competition, found to be all removed, as in the case of a railroad or canal, they necessarily must be, when opened on the line so surveyed and staked.

We, therefore, regard the proof made by the defendats below, in relation to the proceedings to appropriate the lands in question, as by no means void for uncertainty of description; but as *prima facie* embracing the lands in question, and sufficient in law, unless rebutted by countervailing proof on the part of the plaintiffs below, and no such proof appears to have been offered upon the trial.

The judgment of the district court must therefore be reversed. And this court, thereupon proceeding to render such judgment in the case as the district court should have rendered orders that the petition so filed by the plaintiffs below be dismissed.

Judgment accordingly.

British Iron Trade.

In consequence of the great demand for British iron in the United States a considerable increase is observable in the exports of iron of various kinds during the last two years. Thus, in the six months ending June 30, the exports of pig and puddled iron were 237,721 tons, against 230,068 tons in the corresponding period of 1863, and 220,241 tons in the corresponding period of 1862; of bar, angle, bolt and rod iron, 153,590 tons, against 157,383 tons in 1863, and 142,831 tons in 1862; of railway iron of all sorts, 222,897 tons, against 199,675 tons in 1863, and 179,973 tons in 1862; of iron wire, 8,330 tons, against 10,236 tons in 1863; and 4,975 tons in 1862; of castings, 33,814 tons, against 43,536 tons in 1863, and 28,693 tons in 1862; of hoops, sheets and boiler plates, 63,783 tons, against 62,122 tons in 1863, and 45,425 tons in 1862; of wrought iron of all sorts, 52,786 tons, against 51,035 tons in 1863, and 45,683 tons in 1862; of old iron for re-manufacture, 4,819 tons, against 10,256 tons in 1863, and 10,757 tons in 1862; and of unwrought steel, 15,936 tons, against 13,034 tons in 1863, and 12,654 tons in 1862; making a total of 793,176 tons, against 777,345 tons in the corresponding period of 1863, and 691,232 tons in the corresponding period of 1862. The value of the exports shows an immense increase, having been £6,996,510 this year, against £5,916,867 in 1863, and £5,071,354 in 1862.—*London Times, Aug.* 24.

Exports of Breadstuffs.

The annexed statistics of the annual exports of breadstuffs for a series of years is from the Circular of Mr. Edward Bill. It will be seen that there has been a falling off in this year's total exports from the previous one of 291,588 bbls. flour, 1,155 bbls. corn meal, 7,239,849 bushels wheat, 9,435,762 bushels corn, 237,495 bushels oats, and 473,707 bushels rye.

Export of Breadstuffs to Great Britain and Ireland from Sept. 1, 1863 *to Sept.* 1, 1864.

The total exports for the year from the port of New York to all ports were: 2,399,495 bbls. flour, 15,659,799 bushels wheat, 1,068,055 bushels corn, 46,103 bushels oats, 181,950 bushels peas, 13,965 bushels rye, 134,199 bbls. corn meal, and 3,435 bbls. rye flour.

Growth of Agriculture in California.

When it is remembered that but little more than a decade of years has elapsed since California was mainly dependent upon the Atlantic States and Chile for her breadstuffs, the subsequent advance made by that prolific State in the culture of cereals, as fully set forth by statistics in the San Francisco *Price Current*, is truly remarkable. Not only is she come to be self-sustaining, in this particular, but her exports of flour and cereals to foreign countries far exceed the expectations even of enthusiasts. The following are the exports of wheat and flour from San Francisco to different countries for the fiscal year ending June 30th, 1864:—

	Wheat. sks.	Flour. bbls.	Equal to bbls. Fl'r.
England	813,553	2,507	278,691
China	161,574	53,246	107,104
Japan	84	1,236	1,264
Australia	90,890	63,337	93,634
Victoria, V. I.	3,809	26,914	28,184
Hawaiian Islands	121	4,699	4,739
Mexico	15	11,948	11,948
Peru	260	.....	87
N. Y. and Boston	....	9	9
Other countries.	986	20,211	29,539
Total	1,071,292	184,102	541,199

The opening of an export trade in agricultural products to China and Australia, to say nothing of other countries, promises important results to our sister State. The trade has already attained large proportions, and bids fair to steadily increase.

Had it not been for the high prices in San Francisco during last Spring and early part of the Summer, consequent upon the drought, and an apprehended scarcity for home consumption, the exports to Australia, Victoria and China, would, we are assured, have been large; but the sudden rise in prices rendered it impracticable to execute many of the orders received, for the transportation of which vessels ballasted with coal were specially sent from England. At the latest dates the export movement was at a stand, and the *Price Current* states that parties there had ordered by telegraph shipments of flour and wheat from this port to China direct.

The exports of barley and oats from California for the year ending June 30th, were as follows:—

	Barley. sacks.	Oats. sacks.
Victoria	20,545	4,698
New York	841	.....
Australia	8,082	80,849
China	200	4,133
Mexico	556	96
Hawaiian Islands	10	976
Japan	....	313
Other countries	36	25
Total	40,270	91,403

With regard to the surplus stocks in California, it is stated that flour has been sold up close to the production, while a handsome surplus of wheat is still in the hands of farmers, and held at about 3 cents per pound. Barley is very low in stock, though there is said to be sufficient to supply the demand for brewing purposes. Last year's crop of oats was proportionably greater than any preceding year, and the surplus remaining is admitted to be very large. The *Price Current*, after a full view of the case, arrives at the conclusion that all grain crops the current year will be quite ample for home use, notwithstanding the drought. From a comprehensive survey of the whole grain-growing districts of California, and a careful comparison of views with those best informed, by letter and otherwise, it feels warranted in estimating the wheat crop of that State for 1864, at 2,000,000 sacks of 100 lbs. each, or just one-half the estimated crop of 1862, which, at $1.65 per 100 lbs., yielded an aggregate of $6,000,000.

Railroad Earnings--Weekly.

The following is a comparative statement of the earnings of the Chicago and Northwestern Railway for the 1st week in September:

	1863.	1864.
Passengers	$31,533 07	$38,755 06
Freight	85,382 15	89,011 97
Express	1,005 97	1,466 96
Mail	1,286 11	1,405 62
Total	119,157 30	130,639 61
Increase 9 63-100 per cent		$11,482 32

From June 1, to Sept. 7th, 1864, (3 months and 1 week) the earnings were $1,649,013 23, against $1,054,184.43 in 1863—an increase of $594,826.80.

The earnings of the Racine and Mississippi and Northern Illinois Railroad for the week ending Aug. 31, 1864, were:

	1864.	1863.
Passengers	$4,872 84	$3,305 53
Freight	14,336 80	9,020 62
Express	104 16	75 00
Mails	296 58	296 58
Total	$19,609 88	$12,697 73
Increase		$6,912 15

Receipts from January 1st to Aug. 31:

1864	$368,504 79
1863	225,099 39
Increase	$134,405 40

The earnings of the Marietta and Cincinnati Railroad for the 4th week in August:

	1864.	1863.
Passengers	$16,732 92	$10.458 83
Freight	15,133 08	9,702 84
Mail, express & telegraph	1,127 05	917 58
Total	$32,993 05	$21,079 25
Total this month to date.	94,375 22	52,864 51
Total since Jan. 1	$641,311 70	$404,427 61

The traffic of the Great Western Railroad for the week ending Sept. 2d, 1864, was as follows:

Passengers	$34,792 40
Freight and live stock	22,750 42
Mails and sundries	1,262 62
Total	$58,805 44
Corresponding week of 1863	49,908 37
Increase	$8,897 07

The earnings of the Toledo and Wabash Railroad Company for the first week of September, 1864, were $61,897 31
Corresponding week of previous year. 26,424 58
Increase $35,472 73

The earnings of the Michigan Southern and Northern Indiana Railroad for the 1st week of September, 1864, were $91,069 00
Corresponding week of previous year. 64,988 00
Increase $26,081 00

The earnings of the Chicago and Rock Island Railroad for the 1st week in September, 1864, were $90,853 00
Corresponding week of previous year. 53,637 00
Increase $37,216 00

The earnings of the Michigan Central Railroad for the 1st week in Sept., 1864, were. $94,081 82
Corresponding week of previous year. 60,503 00
Increase $33,578 82

The earnings of the Chicago and Alton Railroad Company for the week ending Sept. 7th were:

	1864.	1863.
Passengers	$26,908 00	$22,858 83
Freight	44,266 98	25,551 73
Sundries	1,320 79	1,298 91
Total	$72,495 77	$49,709 47
Increase 1864		$22,786 30

The earnings of the Grand Trunk Railway for the week ending Sept. 3d 1864, (including the receipts of the Montreal & Lake Champlain and Buffalo & Lake Huron Railways), were: $116,520 00
Corresponding week, 1863 88,993 00
Increase $27,527 00

Railroad Earnings--Monthly.

The traffic of the Cincinnati and Chicago Air-Line Railroad for the month of August was;

	1864.	1863.
Freight	$40,035 10	$24,706 33
Passengers	40,745 70	22,978 81
Mail, express & sundries.	4,869 50	2,517 85
	$85,650 30	$50,197 99
Increase		$35,453 31

The earnings of the Milwaukee and Prairie du Chien Railroad for the month of August, 1864, were $113,398 00
Corresponding month of previous year 69,352 00
Increase $44,046 00

The earnings of the Dubuque and Sioux City Railroad Company for the month of August, 1864, were $25,470 70
Corresponding month of previous year 15,272 07
Increase $10,198 63

The earnings of the St. Louis, Alton and Terre Haute Railroad for Aug., 1864, were. $218,235 00
Corresponding month of previous year 130,378 00
Increase $87,857 00

The earnings of the Chicago, Burlington and Quincy Railroad for the month of August, 1864, were $510,522 42
Corresponding month of previous year 315,975 55
Increase $194,546 87

The traffic receipts of the European and North American Railroad for the month of August 1864, compared with the corresponding month last year, is as follows:

	1864.	1863.
Passengers	$7,571 36	$6,892 18
Freight	5,938 87	4,422 29
Mails and Sundries	1,182 20	1,158 22
Total	$14,692 43	$12,472 69
Increase		$2,219 74

☞ The ocean built steamship Milwaukee, of the Detroit and Milwaukee Railroad line, is now making tri-weekly trips between Chicago and Grand Haven, giving eastward bound passengers an opportunity of passing through Central Michigan to Detroit. The Milwaukee is very commodious and elegant, and her accommodations are said to be equal to those of any other steamer on the lakes. She leaves Chicago at eight o'clock on every Tuesday, Thursday and Sunday night.

☞ The indebtedness of the State of New Hampshire is $1,174,866 05; valuation, $129,855,167.

The Back Track Railroad at Wilkesbarre.

Workmen are busily employed in building the railroad down the mountain into the valley, to connect with the Lehigh Company's road at the top of the Wilkesbarre Mountain, and thus avoid the inclined planes. But for the scarcity of hands, the excavation would have been almost completed on some parts of the road. When finished, it is the design of the company to use the back track for light freight and passenger trains, and the inclined planes only for the coal trains, the latter being already more than sufficient to keep the planes constantly at work.—*Luzerne Union.*

FOR SALE.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.,
NEW YORK, Aug. 16, 1864

AT A MEETING OF THE BOARD OF DIRECTORS of the Illinois Central Railroad Company held this day, the following resolutions were adopted:

Whereas, In the mortgage given by this company to the trustees to secure their construction bonds, it was agreed that the moneys received upon sales of the lands mortgaged, as fast as received, be applied to the cancellation of said bonds, and it has become necessary for this purpose to take up a portion of the bonds in pursuance of a provision contained in each bond, the company may "pay the same at any time to be named by them by adding to the principal a sum equal to twenty per cent. thereof."

Resolved, That the Company will, on the first day of October next, pay the seven per cent. bonds for one thousand dollars each, numbered from one to three thousand, (1 to 3 000,) with twenty (20) per cent. added to the principal thereof, upon surrender at its office in the City of New York; and that it doth hereby name the first day of October, 1864, as the time when the principal of said bonds shall be paid, after which day interest upon them will cease.

Resolved, That the holders of the scrip stock of this Company be required to pay the unpaid ten per cent. upon the stock held by them respectively, on or before the twenty-sixth day of September next, at the office of the company in the City of New York; and that upon all sums unpaid, interest will be charged from that day; and that after the twenty-sixth day of September next, no transfer shall be made of stock which shall not be paid in full. THOMAS E. WALKER, Treasurer.

Y.**

U. S. 7-30 LOAN.

The Secretary of the Treasury gives notice that subscriptions will be received for Coupon Treasury Notes payable three years from Aug. 15th, 1864, with semi-annual interest at the rate of seven and three-tenths per cent per annum,—principal and interest both to be paid in lawful money.

These notes will be convertible at the option of the holder at maturity, into six per cent gold bearing bonds, payable not les than five nor more than twenty years from their date, as the Government may elect. They will be issued in denominations of $50, $100, $500, $1,000 and $5,000, and all subscriptions must be for fifty dollars or some multiple of fifty dollars.

The notes will be transmitted to the owners free of transportation charges as soon after the receipt of the original Certificates of Deposit as they can be prepared.

As the notes draw interest from August 15, persons making deposits subsequent to that date must pay the interest accrued from date of note to date of deposit.

Parties depositing twenty-five thousand dollars and upwards for these notes at any one time will be allowed a commission of one-quarter of one per cent, which will be paid by the Treasury Department upon the receipt of a bill for the amount, certified to by the officer with whom the deposit was made. No deductions for commissions must be made from the deposits.

SPECIAL ADVANTAGES OF THIS LOAN.

IT IS A NATIONAL SAVINGS BANK, offering a higher rate of interest than any other, and THE BEST SECURITY. Any savings bank which pays its depositors in U. S. Notes, considers that it is paying in the best circulating medium of the country, and it CANNOT pay in anything better, for its own assets are either in government securities or in notes or bonds payable in government paper.

It is equally convenient as a temporary or permanent investment. The notes can always be sold for within a fraction of their face and accumulated interest, and are the best security with banks as collaterals for discounts.

Convertible into a Six per cent. 5-20 Gold Bond.

In addition to the very liberal interest on the notes for three years, this privilege of conversion is now worth about three per cent per annum, for the current rate for 5-20 Bonds is not less than NINE PER CENT PREMIUM, and before the war the premium on six per cent U. S. stocks was over twenty per cent. It will be seen that the actual profit on this loan, at the present market rate, is not less than ten per cent per annum.

Its Exemption from State or Municipal Taxation.

But aside from all the advantages we have enumerated, a special Act of Congress EXEMPTS ALL BONDS AND TREASURY NOTES FROM LOCAL TAXATION. On the average, this exemption is worth about two per cent per annum, according to the rate of taxation in various parts of the country.

It is believed that no securities offer so great inducements to lenders as those issued by the government. In all other forms of indebtedness, the faith or ability of private parties, or stock companies, or separate communities, only, is pledged for payment, while the whole property of the country is held to secure the discharge of all the obligations of the United States.

While the government offers the most liberal terms for its loans, it believes that the very strongest appeal will be to the loyalty and patriotism of the people.

Duplicate certificates will be issued for all deposits. The party depositing must endorse upon the ORIGINAL certificate the denomination of notes required, and whether they are to be issued in blank or payable to order. When so endorsed it must be left with the officer receiving the deposit, to be forwarded to the Treasury Department.

SUBSCRIPTIONS WILL BE RECEIVED by the Treasurer of the United States, at Washington, the several Assistant Treasurers and designated Depositaries, and by all National Banks which are depositaries of public money,

AND ALL RESPECTABLE BANKS AND BANKERS throughout the country will doubtless AFFORD FACILITIES TO SUBSCRIBERS.

CAST STEEL.

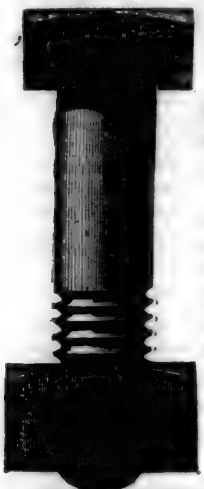
MANUFACTURED BY

NAYLOR, VICKERS & CO., SHEFFIELD, ENGLAND.

CAST STEEL TYRES WITHOUT WELD,

Reversible Crossings and Frogs, Disc Wheels, Pistons and Piston Rods without weld, Crank and Straight

AXLES, AND EVERY DESCRIPTION OF STEEL FOR RAILWAY PURPOSES.



STEEL CROSSINGS have been in use more than three years with very little perceptible wear, in places where the ordinary ones had to be replaced every four months. They have been estimated to be good for ten years in the worst places.

THE **"VICKERS" TYRES are in constant and extensive use on almost all** the Railways in Great Britain, and also on many roads in other parts of Europe. Their chief advantages are:—1. Their Durability: they will outlast any Iron Tyre without being turned, and for this reason are cheaper than Iron Tyres (free of cost). 2. Their Safety: being without a weld they are not liable to break, and Steel is proved to be a stronger and tougher metal than any other. 3. Their Uniformity they do not wear in flat places nor "laminate." 4. They are not injuriously affected by frost, and are guarantied to stand the severest climate.

STEEL AXLES will be found economical, because they may with safety be made much lighter than those of Iron. They will wear longer and "smoother," and will consume much less oil; nor are they liable to granulate from constant use.

For CIRCULARS, GIVING FULL PARTICULARS AND TESTIMONIALS, PRICES, etc., apply to **NAYLOR & CO.,**

421 Commerce street, Philadelphia; 99 John street, New York; 80 State street, Boston.

BOONTON IRON WORKS.

PATENT MACHINE FORGED

BOLTS AND NUTS.

WE are now manufacturing these goods at our Works at BOONTON, N. J.—In the manufacture of the Nuts, the **patented device of the "Double Punch,"** viz, two punches operating from opposite sides **towards the centre of the Nut, forces into the body of the Nut most of the Iron** which in all other processes is punched out, and also **condenses the Iron** around the Bolt hole, thus **ensuring the greatest strength in the Screw Thread,** and making a Nut **SUPERIOR TO ANY** made by hand or the ordinary machine processes. In size they are made according to the standard approved and adopted by our best Machinists and Engine Builders. The mode of making Bolts is such as to produce an **upset solid head, perfectly true on all sides,** and of **uniform size.** The Iron used is of **our own manufacture,** and we guaranty it of superior quality.

We invite consumers to make trial of them, and will furnish **SAMPLES** and **PRICE LIST** on application.

FULLER, LORD & CO.,

137 & 139 GREENWICH ST.,

NEW YORK.

Solid Emery Vulcanite.

WE are now manufacturing wheels of this remarkable substance for cutting, grinding and polishing metals, that will outwear hundreds of the kind commonly used, and will do a much greater amount of work in the same time, and more efficiently. All interested can see them in operation at our warehouse, or circulars describing them will be furnished by mail.

NEW YORK BELTING AND PACKING Co.,
Nos. 37 and 38 Park Row, New York.

MACHINE BELTING,

STEAM PACKING, ENGINE HOSE.

THE superiority of these articles, manufactured of vulcanized rubber, is established. Every belt will be warranted superior to leather, at one-third less price. The Steam Packing is made in every variety, and warranted to stand 300 degs. of heat. The Hose never needs oiling, and is warranted to stand any required pressure; together with all varieties of rubber adapted to mechanical purposes. Directions, prices, etc., can be obtained by mail or otherwise at our warehouse.

NEW YORK BELTING AND PACKING CO.,
JOHN H. CHEEVER, Treasurer,
Nos. 37 and 38 Park Row, New York.

NEW 7 3-10 LOAN AND TEN-FORTY BONDS.

TENTH NATIONAL BANK,

No. 240 Broadway,

Will receive subscriptions for the New 7 3-10 Treasury Notes, which will be dated Aug. 15, with semi-annual coupons, and issued in sums of $50, $100, $500, $1,000 and $5,000. Parties subscribing will be allowed interest to Aug. 15, and the commission allowed by Government of $2 50 on each $1,000. The Ten-Forty 5 per cent. Bonds date from March 1, and 50 per cent. premium for gold interest. Payments must be made in Legal-Tenders or National Bank Notes.

D. L. ROSS, President.
J. H. STOUT, Cashier. 41-31

RENSSELAER POLYTECHNIC INSTITUTE, TROY, N. Y. The FORTY-FIRST ANNUAL SESSION of this well-known SCHOOL OF ENGINEERING AND NATURAL SCIENCE, will commence SEPT. 14th, 1864. The PRINCIPAL BUILDING is completed and ready for occupation. The NEW ANNUAL REGISTER, giving full information, may be obtained at APPLETON'S Bookstore, New York, or from
41-31 Prof. CHARLES DROWNE, Director, Troy, N. Y.

FOR SALE.

SIX NEW FIRST-CLASS FLAT CARS, 4 feet 8½ inch gauge. Apply to

GEO. T. NEWHALL,
New Haven, Conn.

BAIRD'S PATENT
Incrustation Preventer,

AND REMOVER

FOR STEAM BOILERS,

In either Salt or Fresh Water. No invention connected with Steam Power combines so many advantages as this. The economy in fuel alone, from its use, repays the cost of the preventive. Certificates from Engineers and owners of Steam Boilers, at sea and on shore, can be seen at the office of

JAS. F. LEVIN,
33 Central Wharf, Boston.

Confederation of the British North American Provinces.

Since the act of Union in 1840, by which the Canadas became one, at least in their legislative character, the population which before that period was greatest in the lower province, is now less by 400,000 than in the upper province. Yet the representation remains equal or nearly so. The consequence is, the French and English parties are so nearly balanced, that a working majority cannot be relied on, and there is a dead lock in Parliament on almost every public question, where these interests come in collision. As a solution of the difficulty it is now proposed to form a confederated government, and fix such a representation as will secure unity of purpose, with power to carry on the Government, unshackled by the opposition of any one portion. The Toronto *Leader* edited by Mr. Brown we believe, or at least speaking his views, and these are important since he is reckoned to be the great leader in the new movement, furnishes us with an interesting statement of the progress and resources of the provinces. From this source and others we are enabled to obtain a very correct idea of the present condition of the British dependencies.

There is considerable diversity in the products and pursuits of these provinces. Canada may be set down as a lumbering and an agricultural country; Nova Scotia is a fishing, agricultural, and commercial province; Newfoundland as a huge fishing station; Prince Edward's Island as a fishing and agricultural country; while New Brunswick gives its chief attention to the forest. But though these are the main characteristics of the pursuits of the different provinces, there are others of considerable importance, such as shipbuilding, which must not be left out of the account. It is the products of these industries which they export, and which enable them to import what they require. In process of time these pursuits must, in the nature of things, undergo considerable modification. Lumbering is a destructive process, in which the repair of the waste of each year lags considerably behind; and to a certain extent agriculture follows in the path of the baffled lumberman, whose crop once cut grows not again for him. The fisheries depend upon competition and upon the possibility of their preservation; and agriculture has reached that stage when, if it does not improve, it must deteriorate; but there is reason to suppose that increasing intelligence will lead to its amelioration.

There has, since the commencement of the present century, been a steady and rapid increase in the tonnage of the vessels owned and employed in British America:

	Tons.
1806	71,943
1830	176,040
1836	274,738
1846	399,204
1850	446,935
1861	552,498

The commercial marine of British America is exceeded by that of only three nations—England, the United States, and Russia. Her commercial marine, therefore, ranks as the fourth in the world. Of the five provinces, Nova Scotia ranks the highest in this respect and Canada the lowest. There is no regular official return in which the number and tonnage of Canadian vessels is given.

The commerce of the provinces requires a large tonnage for its accommodation. It is as follows:

	Vessels entered.	Tons.	Vessels cleared.	Tons.
New Brunswick (1861)	2,518	727,316	3,342	744,092
Newfoundland (1861)	1,337	181,917	1,159	171,080
Nova Scotia (1861)	6,322	696,763	6,089	695,582
Prince Edward's I. (1863)	1,137	79,580	1,166	87,618
Canada (1863) from sea	2,463	1,041,679	2,514	1,071,107
Canada internal navigation	16,236	3,538,701	15,724	3,368,433
	30,013	6,265,958	29,994	6,137,811

This is nearly double the tonnage engaged in the commercial marine of France, which is only 3,288,000 tons, and is over twice as great as that engaged in the foreign commerce of the United States twenty years ago.

The following is the tonnage of British America, exclusive of British Columbia, as all these figures are:

	Tons.
Nova Scotia (1862)	248,061
New Brunswick (1861)	227,718
Newfoundland (1862)	87,030
Prince Edward's Island	45,000
Canada (1861)	44,365
Total	652,174

The tonnage of Prince Edward's Island here given is an estimate based upon earlier returns. In 1850 the tonnage of that island was 27,927 tons, and in 1851 it was 31,410; so that 45,000 tons now does not seem an excessive estimate. A large part of the shipping of the maritime provinces is engaged in the fisheries, to which, such is the extraordinary want of enterprise in that respect, Canada did not, a few years ago, send a single vessel. These figures show that, with a natural disposition to be arrogant about her possessions, Canada owns only a very small proportion of the shipping of British North America and that the Lower Provinces are, as a maritime people, far in advance of her.

The imports of British America already exceed those of the United States forty-three years ago. In 1821, the total value of the goods imported into the United States was only a little over sixty-two millions of dollars, of which over ten millions worth were re-exported; those of British America are now nearly seventy millions. At the same time, the exports of the States were less than sixty-five millions, an amount not very largely in excess of those of British America at the present time. These facts show that, in point of commerce, British America is only about forty-five years behind the States. The returns in our possessions of the imports and exports of the maritime provinces only come down to 1861; and as we have put them alongside those of Canada for 1863, the effect is to place the former at a disadvantage and to exagerate the superiority over them of the commerce of Canada. The imports and exports of all the provinces, British Columbia excepted, are presented, in one view, in the following table:

	Imports.	Exports.
Nova Scotia (1861)	$7,613,227	$5,774,334
Prince Edward's I. (1860)	1,150,270	1,007,170
Newfoundland (1861)	5,764,285	5,462,755
New Brunswick (1861)	6,190,665	4,735,455
Canada (1863)	45,964,493	41,831,532
	$66,682,940	$58,811,246

At the present time the exports and imports of the maritime provinces are probably each a mil-

lion and a half more than these figures show. This would make the whole imports about $68,000,000 and the exports $60,000,000. The disparity between the two is less than the returns indicate, because the ships built in some of the Lower Provinces and sold in Europe are not counted in the exports.

The Charlottetown *Islander* says that the value of the whole exports of Prince Edward Island to all countries, during the year 1863, was £209,472 sterling; of this amount more than one-half, namely; £105,733, were for exports to the United States of America. The value of the exports during the same year to Great Britain was but a little over a fifth of this sum, namely: £21,949. There has been a rapid increase in the trade of the Island. In 1844 the value of the exports was £1,257; in 1863 it was £105,733.

The taxation and finances are thus stated in the Toronto *Globe*.

The imports of the Canadas have for some years averaged about $42,000,000 a year. In Nova Scotia the average has been about $7,500,000; in New Brunswick, $6,500,000; and in Prince Edward Island, $1,100,000—or in other words, about $14,000,000 against $42,000,000. The exports of the Canadian have for some time averaged about $38,000,000 a year. The average in Nova Scotia has been about $6,500,000; in New Brunswick, $4,500,000; and in Prince Edward Island, $1,200,000,—a little over $11,500,000 altogether. Thus, taking either the imports or the exports, we find that the trade of the Canadas is about three times as large as that of the three other Provinces, and that in the federation of the five Provinces three-fourths of the trade would belong to Canada.

If we turn to the taxation of the different Provinces, we find even a more marked disproportion. In Canada the provincial revenue raised last year exceeded $10,000,000, and is henceforward to be something more. In Nova Scotia the revenue in 1862 was $127,298; in New Brunswick, $692,230; in Prince Edward Island, $187,753; in all, $2,007,281, against ten millions or more. If we take again, as a point of comparison, the quantity of land under cultivation in the different Provinces, we reach a result very similar to those shown by our previous comparisons. According to the census of 1861, Upper Canada had 6,051,619 acres under cultivation and Lower Canada 4,804,235 acres; together 10,855,854 acres. In the same year we find it stated that Nova Scotia had 1,027,793 acres under cultivation, and that in the same year New Brunswick had under tillage 835,108 acres. Prince Edwards Island 300,000, and adding the figures for the Maritime Provinces, we get a total of 2,162,000 acres, against just about five times that extent of tilled land found in the Canadas.

The territory of British America is a vast one. In square miles its area is stated as follows:

In point of territory British America, under one Government, would make one of the most extensive countries in the world. We have taken some pains to present its superficial area, in square miles, with as much accuracy as is attainable; though it is impossible to arrive at absolute correctness in respect to countries of which the irregular outlines are, in the more distant parts, only imperfectly surveyed or explored:

	Sq. miles.
Newfoundland	40,200
Prince Edward Island	2,173
New Brunswick	27,105
Nova Scotia	18,600
Canada	330,000
Hubson's bay territory, North West	2,300,000
British Columbia	200,000
Vancouver's Island	15,000
	2,933,078

British America has a larger area than the neighboring States, the extent of which is generally overated by their inhabitants; but which on a critical examination, is found not to exceed 2,364,400 square miles. Europe is only a little larger than these British possessions; its extent being 3,150,000 square miles against 2,933,078.

If Europe has a population of 230,000,000, we must not conclude that an equal extent of country on the northern part of this continent possesses a similar capacity for sustaining human life. It is true the greater part of even the Hudson's Bay territory lies within what is, for convenience sake, called the temperate zone; that is below latitude 62½ north, yet the whole eastern coast has an arctic climate. The amelioration of the climate westward is astonishingly great; and this fact is of greatest possible importance, because it is in the West that the good soil is found. In the valley of the great Saskatchawan, up to Athabaska river, a large population will doubtless one day swarm.

Its frontier has similar proportions.

	Extent of boundaries in miles.
Newfoundland	1,000
Prince Edward Island	350
Nova Scotia	1,000
New Brunswick	775
Canada	2,200
From Lake of the Woods to Pacific	1,300
Pacific Coast of British Columbia	550
Vancouver's Island	500
Labrador coast to Cape Chudley	850
Northern boundary from Cape Chudley to the mouth of Mackenzie's River	3,000
Total	11,525

The population of the provinces in 1861, was as follows:

Prince Edward's Island	80,757
New Brunswick	252,057
Nova Scotia	330,857
Lower Canada	1,110,664
Upper Canada	1,396,091
Red River (about)	10,000

Newfoundland is estimated to contain at the present time about 126,000 inhabitants.

The agricultural resources of Upper Canada so far as the production of what is known, are stated to be as follows:

In Upper Canada 1851 the crop of wheat was 12,682,350 bushels raised on 798,275 acres. In 1861, 24,620,425 bushels raised on 1,386,845 acres.

The Commerce of Canada and the provinces as among themselves is not large, being between that and the other provinces in 1863, in exports $935,196 and in imports $510,813.

Between some of the provinces the trade is relatively greater. In 1858 the whole imports of Prince Edward's Island were worth 186,229*l.*, of which 85,167*l.* came from Nova Scotia and 13,238*l.* from New Brunswick, while Canada and Newfoundland together contributed less than 10,000*l.* The exports to none of these provinces were relatively great, except in the case of Newfoundland, where they rose to nearly 16,000*l.* New Brunswick imported in 1859 from the sister province of Nova Scotia to the value of $180,411 and exported to the value of $62,894. In 1862 Nova Scotia imported to the extent of $725,685 from the other provinces. The existing intercolonial trade between imports and exports is probably not less than three millions and a half of dollars. This estimate is based upon the following returns, which are defective chiefly in being too old, but they are sufficient to show the probable amount of the commerce carried on between the provinces:

	Imports.	Exports.
Canada (1863)	$501,713	$935,696
P. E. Island (1858)	398,828	273,848
New Brunswick (1859)	734,648	281,720
Newfoundland (estimate)	50,000	50,000
	$1,485,189	$1,541,264

This intercolonial trade, there can be no doubt, would receive a great impetus from a political union of the provinces, which would give them a common tariff and break down the barrier which customs' duties now raise between them.

British North American vessels are not allowed to register in the United States, the navigation laws of the latter not permitting them to be employed in the coasting trade. Lord Elgin tried in vain to remove this difficulty when he negotiated the reciprocity treaty. To obtain this privilege, there would be granted additional advantages to this country, as ship building looks for its profit in the provinces mainly to foreign markets. This is a boon asked for with great earnestness. For it appears from the following, that it is a large and thriving branch of business.

British North America, unlike Holland—which has been described by its great historian as "a region outcast of ocean and earth," possesses great natural facilities for the building of ships. Nearly all the provinces possesses an abundance of timber suitable for this purpose. And they build for sale elsewhere, as well as for their own use, a large number of vessels. The origin of ship building in these provinces dates far back; being at first confined to supplying the home demand, arising out of the coasting trade and the prosecution of the rich and extensive fisheries. Gradually vessels for exportation began to be built. Last year there were built in Canada 158 vessels, steam and sail, having an aggregate tonnage of 67,209 tons. Of the whole number 88 were built in Quebec, and their tonnage amounted to 54,735 tons; but the tonnage of vessels built in Canada last year was more than double that of those built in 1862, when it was only 29,803. New Brunswick is probably not behind Canada in the number of ships she builds. St. John is the chief seat of this manufacture; 2,000 men being engaged in the craft of shipbuilding in that city. In 1862 there were built and registered in New Brunswick 90 vessels, having an aggregate tonnage of 48,719 tons; being 10 vessels and 8,000 tons more than were built in the previous year. Of these, 82, with a tonnage of 23,186 tons, were classed A 1 by Lloyd's agent; 24 more took the same rank for four years, and 34 were not surveyed by Lloyd's agent while in course of construction. The value of these 90 vessels has been officially estimated at $1,827,250. In 38 years ending 1862 there had been built in New Brunswick 3,869 vessels, measuring 1,405,531 tons. These vessels must have produced in the aggregate between fifty and sixty millions of dollars; the profit on which would be very considerable, if we may judge by the fact that the net profit of the ships built in New Brunswick in 1862 has been officially estimated at $750,000. The number of vessels registered in any one of the provinces is not necessarily identical with the residue remaining there after the sale of those which find a market in the United Kingdom. A tax of 1s. a ton on colonial vessels registered in England tends to keep them registered in the provinces where they are built. Nova Scotia, like its two sister provinces, produces a considerable number of ships. In 1862 there were built in that province 201 vessels, measuring altogether 39,383 tons, and being valued at $1,566,186. Newfoundland, in the same year, built for the use of the fishery, vessels of which the aggregate tonnage was 2,786 tons; they averaged 107 each. In 1862 there were built in Prince Edward's Island 67 vessels, measuring in the aggregate 9,006 tons. This makes an aggregate production of vessels in British North American in 1862 of 129,697.

Canada	109	29,803
New Brunswick	90	48,719
Nova Scotia	201	39,393
Newfoundland	—	2,786
Prince Edward's Island	69	9,006
Total	461	129,697

These vessels would be worth about six millions and a quarter of dollars, a fact which shows the error of the too-common notion that British America is without manufactures.

How far these interests would be benefitted by a confederacy without national independence, and legislation and diplomacy of an independent national character is the real question to be determined. It is certain that the French in Lower Canada are beginning to be refractory, and propose a nationality of their own at the hazard of a civil war.

The Committees of Parliament attended by delegations of the Canadian Press are coasting along the lower maritime provinces to ascertain how far the scheme is likely to meet with support, where a similar proposition for a local confederation exclusive of the Canadas is also being discussed.

We wish the Canadas great prosperity, and continued amicable relations with the United States under whatever form of Government they may hereafter choose for themselves.

Winona and St. Peter Railroad.

The Winona and St. Peter Railroad is rapidly stretching forward its iron arms to our neighboring city, Rochester. The track layers are in sight of that city, and have only three miles more of the line to complete before reaching that place. All the iron that is needed for the main and side tracks to finish the road to that point has been received, and also the necessary rolling stock to equip the road for business with the exception of passenger cars. The only drawback the company at present experience is the want of ties, but we are satisfied that the indomitable perseverance of Col. A. DeGraff will surmount all obstacles in this line. Before the close of the month, we confidently expect the road will be open for business to Rochester.—*Winona Republican.*

North Pennsylvania Railroad.

The earnings of this road for the years ending November 30, 1862 and 1863, were:

	1862.	1863.
From passengers	$148,329 58	$190,539 91
" coal	105,390 19	440,288 94
" pig iron	12,349 01	19,867 22
" lumber	8,897 51	7,046 85
" local freight	86,559 02	118,690 31
" through "	29,743 55	38,235 87
" mails	2,756 00	2,756 00
" rents, etc.	3,161 45	7,212 59
	$397,186 26	$524,637 69
Expenses, viz:		
Maintenance of way	$26,705 04	$54,174 12
Motive power	62,665 16	86,292 43
Maintenance of cars	15,008 66	21,888 12
Conducting transp.	58,501 72	67,626 77
General expenses	15,345 62	19,098 29
	$178,226 20	$249,079 73
Net earnings	$218,960 06	$275,557 96

Compared with the previous year the earnings of 1863 show an increase of $127,451 43; with an increase in expenses of $70,853 53—making the increase in net earnings $56,597 90.

The through freight business, in connection with the Lehigh Valley railroad company, amounted to $205,438 88, against $156,880 26 for the year 1862, showing an increase of $49,058 62. The through passenger business, with that road, amounted to $37,285 59, making, as this company's share of the joint through business with the Lehigh Valley railroad company, $242,724 47 for the year.

The local freight earnings have increased $32,131 29, or about 37½ per cent.

The passenger earnings show an increase of $42,210 38, or about 28½ per cent. The tariff charges, on both passenger and miscellaneous freight, have not been advanced, but remain the same as in 1862.

The charges against income, for 1863, are as follows:

Six per cent. coupon	$150,000 00
Ten " "	36,000 00
Interest on scrip	14,781 60
Ground rents, and interest on mort.	5,471 73
Government tax on passengers	5,703 40
	$211,956 73
Less interest earned	2,972 89
Total	$208,983 84

Being an excess of earnings over expenses and interest of $66,574 12. The report says:

At the date of the last Annual Report, it was expected that the Penn Haven and White Haven railroad company would have had their road finished and opened for trade before the close of 1863; but circumstances, beyond their control, have delayed the completion of that important link much beyond the time originally anticipated by the chief engineer of that company. The work is, however, in a forward state: a large portion of the track has been laid, and the whole work is being pushed forward rapidly as circumstances will admit, and it is expected that it will be completed and opened for use early in the coming summer. This road will connect, at its southern terminus, with the Beaver Meadow railroad at or near Penn Haven, and at its northern terminus with the Lehigh and Susquehanna railroad at White Haven, and will complete a new and direct railroad route, *via* North Pennsylvania railroad, between Philadelphia and Wilkesbarre, one hundred and thirty-five miles in length, and over fifty miles shorter than the other routes. The opening of this route to Wyoming Valley, it is believed will add largely to the earnings of the North Pennsylvania road. As a passenger route, the saving in distance, with the comfort of being carried through without change of cars, must render it popular with travelers.

The anticipated increase in the earnings of this company from that connection, will be obtained without any outlay of capital, other than providing additional cars, while the working expenses of the road will be but slightly increased.

A proposition has been before the Select Council of Philadelphia, asking the city to endorse the bonds of the Lehigh and Delaware Water Gap railroad company to the extent of $200,000, and to transfer to that company $700,000 of the stock of this company belonging to the sinking fund of this city, in order to enable the Lehigh and Delaware Water Gap railroad company to build a railroad from Freemansburg to Easton, (a distance of nine miles.) The parties immediately interested in the project having represented that the directors of this company are opposed to the building of such road, it is but proper to state that this Board have not, nor do they oppose the building of the proposed road; they only refuse to endorse the statements made by that Company, and opposed the passage of the Ordinance of Select Council, appropriating the stock and credit of the city for that purpose.

The company have 17 locomotives. The number of miles run has been: With passenger trains, 177,762; with freight trains, 95,574—total 273,236. Cost of repairs, $15,060 11. Cost of fuel, $34,034 65. Cost of stores, $2,389 28. Number of passengers carried, 421,638; do., carried one mile, 7,312,080—equal to 135,409 through passengers. Tons of freight carried one mile, 10,260,651.

The amount charged to construction during the year has been $5,149 34. The amount added to the equipment account has been $17,657 66.

Transportation Companies and the Income Tax.

The Commissioner of Internal Revenue Tax has issued a lengthy and important circular relative to the assessment and collection of tax on gross receipts of railroads, canals, &c. Where another party than the owner of a railroad, canal, or steamboat has possession, care and management of the road, boat, barge, &c., doing business and receiving the fare and freight, he, and not the owners, is liable for the tax. The expenses paid for tolls, towing, pilotage, wharfage, State or municipal taxes, cannot be deducted from the gross receipts before making returns.

Any party using his own vehicle or vessel for transportation of his own property is not liable to the duty, nor is the party who occasionally transports passengers or freight. A livery stable-keeper, keeping horses and carriages for hire, is not liable, but he becomes liable if he engages in the business of transporting persons or property for hire. Sums received by steamboats from berths, and by railroads for sleeping cars, must be included in gross receipts. The towing of boats and rafts by tugs is not considered transportation, and is not liable for duty.

The internal revenue law authorizes persons, companies and corporations to add taxes to rates of fare, notwithstanding any limitation of law agreement; but no such addition is given for additional tax to bills of freight. Toll roads and bridges, whose annual gross receipts do not exceed the amount necessary to keep them in repair, are exempt from duty.

Negligence.—Measure of Damages.

The recent case of Drew against The Sixth Avenue Railroad Company, was an appeal from the New York Common Pleas to the Court of Appeals. The facts of the case are fully stated in the opinion of the Court of Appeals, which is as follows:

DENIS, CH. J.—This action was presented in the Court of Common Pleas for the City and County of New York, to recover for an injury to the plaintiff's son, a lad of about eight years old, who was injured by being run over by the defendants' horse cars in one of the streets of the city, and resulted in a verdict and judgment for $2,500 damages. The plaintiff was a widow, and her son lived with and was supported by her; and on his part he performed slight services, such as going of errands and assisting his mother in a store kept by her.

It appeared that the lad was on his way to school, his course being down the Sixth Avenue, and he desired to ride on the defendants' cars which were proceeding in that direction. According to his account of the matter, which was corroborated by the driver, he made a signal by holding up his finger to the brakeman who stood by the side of the driver, and came towards the car, opposite the front platform on which the driver and brakeman were standing, the latter beckoning him to come forward.

When he came near enough, the brakeman seized him by his coat with a view to place him on the platform, but on account of his weight, he slipped out of his hands upon the track and the front wheel passed over his foot, crushing it so that it had to be amputated. According to the testimony of the brakeman, he did not in any way invite the boy to come to the platform, but made a sign to forbid and repel him, but he came forward, nevertheless, and stumbled and fell under the wheel, the witness endeavoring unsuccessfully, to get hold of, in order to save him. There was newly fallen snow lying on the ground.

It was not pretended that the train stopped, or that its speed was slackened as the boy approached. It was shown that it was against the rules of the company to allow passengers to get on or off the front platform. The penalty was dismissal. The brakeman was also a driver. These two drivers were on the platform in consequence of their having a double team. They took turns in driving—when one drove the other managed the brake. A surgeon explained the nature of the injury, and of an apparatus which had been contrived to enable him to walk; but gave it as his opinion that he was disabled for life, and would eventually have to use crutches.

The Judge charged the jury, laying down the law upon the subject of negligence with accuracy, and stating in effect, that the verdict ought to depend upon the conclusion they should come to as to the two contradictory accounts of the facts which had been given by the witnesses.

Among other remarks which he made were the following: "If this driver or brakeman saw fit to intimate to the boy to come forward, and he followed that intimation, and then, if instead of stopping the car, he seized the person of the child to lift him perforce upon the moving car, there can be no doubt but that would be an act of negligence—that kind of negligence in the discharge of duties appertaining to his employment for which his principal would be liable."

The principal is not liable for the wilful acts of his agent, or for an act done out of the course of his employment; but this would be an act done in the course of his employment, the inviting or assisting or getting passengers on the car, for which the law would hold the principal responsible.

The defendants' counsel excepted to this portion of the charge. He also desired instructions to be given to the jury to the following effect; that it was negligence in the plaintiff to allow the lad to be in the streets without a protector; on account of his tender age; that the plaintiff was not entitled to recover damages for the prospective value of the services of the child beyond the day of trial, and that the evidence did not warrant a recovery for any sum beyond nominal damages; and he excepted to the several rulings by which the judge declined to give either of these instructions.

The exception to the charge is sought to be supported by the suggestion that it assumes that it was a part of the duty of the brakeman to assist passengers to get upon the cars, which is argued not to be the case.

It does not distinctly appear what the extent of the duties of the two persons who were stationed on the platform to direct and to manage the brake were.

If the defendant had desired to make a question upon that point, he should have called the attention of the judge distinctly to it.

It does not appear whether the defendant had any other servant upon the train.

Prima facie, the persons controlling the motions of the train, and regulating its stoppings and its startings would be those who would act in the admission and the discharge of passengers.

If it was otherwise, in the present case, the defendants should have shown it.

There is no force in the suggestions that the brakeman was not in the service of his employers in attempting to assist the boy to get upon the car, or that his act was one of force and violence for which his employers were not responsible.

He was acting within the scope of his employment in getting the lad on board, and the company is not the less liable because he performed that act in an improper, negligent and dangerous way.

Again, the argument assumes that the jury were instructed, that, as matter of law, the act of the brakeman was negligence. I do not think the judge attempted to lay down any rule of law.

In the course of a comment upon the facts he affirmed that a certain state of things, which one version of the evidence tended to prove would, without doubt, be negligence. In this, we think, he was quite right, though there is nothing to show that he intended to take the question from the jury.

Neither of the requests for instructions to be given to the jury were such as if would have been proper to give.

It was not, as a matter of law, negligent or in any way improper for the plaintiff to send her son to school without an attendant.

If the proposition were tenable at all, it was for the jury and not the Court to pronounce it.

The plaintiff could not have a second action for the act of negligence by which her son was injured, and she was therefore entitled to recover the whole of the damages, which were inevitable from the nature of the injury in this action.

The amount of these damages was a matter belonging to the jury to determine. It would not have been right for the judge to charge, as he was requested to do, that they should be nominal.

It follows that the judgment ought to be affirmed.

All the judges concurring.

Judgment affirmed.

Important to Coal Consumers.

The United States Circuit Court at Philadelphia have decided that the weight of a ton of coal is 2,240 pounds instead of 2,000 pounds. The Judge ruled that a company of grocers might as well meet and agree to reduce the number of ounces in a pound, and make the smaller number the standard of a pound for their customers, as for coal dealers to agree that the weight of a ton shall be 2,000 pounds, and furnish that amount to their customers.

Racine and Mississippi Railroad.

The fifth year of the operations of this road by the trustees for the first mortgage bondholders expired on the 10th of May, 1864. We have been favored with a copy of the report of the General Manager, Superintendent, Secretary and Engineer, giving a detailed account of the operations of the road during the year. The earnings were:

From passengers	$108,039 15
" freight	361,793 96
" mails, etc	20,763 64
	$490,596 76

And the expenses were:

Repairs of road	$43,866 57	
" equipments	33,349 66	
" cars	42,790 42	
" bridges, etc	15,309 29	
Fuel	68,368 30	
Oil and waste	7,818 24	
Station service	29,266 24	
Train hands	44,986 56	
Taxes—local	9,819 47	
" United States	2,908 27	
Salaries	19,275 84	
All other expenses	34,636 32	
		352,395 18
Net earnings		$138,201 57

The above includes the business of the Northern Illinois Railroad, operated by the trustees of the Racine and Mississippi Railroad, during the year, between Freeport and Savanna, 38 miles; this road completes the connection between Lake Michigan and the Mississippi River by a line of 142 miles. The report says:

On the 10th day of May, 1859, the Racine and Mississippi Railroad Company gave up possession of the railroad under a deed of surrender to the Farmers Loan and Trust Company, as trustees for the first mortgage bondholders. The road was then in operation from Racine to the station of Davis, in the State of Illinois, a distance of 90 miles. From Davis to Savanna on the Mississippi, the company had done some grading, but their resources were exhausted, the interest on their mortgage bonds was in arrear, the wages of their employees were also in arrear, and their credit was not sufficient to raise means to finish even 14 miles additional, to accomplish the connection with the Illinois Central Railroad, at Freeport. To avoid the absolute foreclosure of the first mortgage on the property, the surrender was

agreed to with the stipulation that a certain amount should be at once expended in finishing the road to Freeport, and that the company should have five years to redeem the property from the time of the opening to Freeport. The earnings were to be applied to the payment of arrears to employees, the re-payment of the advances by the bondholders, and then to the payment of arrears of interest on bonds and coupons as they matured.

On the 1st of September, 1859, the road was completed to Freeport, and opened for business; hence the term of five years for redemption by the company expires on the 1st of September of the present year.

On the trustees taking possession, the property proved to be in a more involved condition than had been anticipated. The depot grounds at the principal stations were heavily mortgaged ahead of the first mortgage. Right of way had only been partially paid for along the line; the iron and material represented in the company's reports to be on hand for the extension of the line had been resold, a large proportion of the rolling stock had been removed from the road, and was held under attachment, and a large amount was due employees. The traffic was very limited, and of a character which could yield only a percentage of profit. The receipts and profits have been as follows:

	Gross Revenue.	Net Revenue.
1st yr. end'g May 10, 1860.	$169,916.03	$35,125,89
2d " " 1861.	220,850.04	68,438.56
3d " " 1862.	245,813.79	68,640.00
4th " " 1863.	266,089.36	43,999.80
5th " " 1864.	352,958.49	69,385.44

In the 1st year the Trustees paid liens on depot grounds, arrears of taxes, arrears of wages, and miscellaneous judgment debts to the amount of $20,350 44

In the 2d year, liens, &c., and arrears of wages in full with interest	45,334 57
In the 3d year, liens &c.....	4,433 55
In the 4th year, liens &c.....	7,344 20
In the 5th year, liens &c.....	267 33
	$77,730 47

The expenditures under the head of construction, have been as follows:

1st year	$309,563 44
2d "	35,779 54
3d "	22,378 12
4th "	69,651 06
5th "	5,702 37
Total	$443,074 53

The large amount of the 1st year was expended on the construction of the line from Davis to Freeport.

Of the 2d year's expenditure, $18,351 06 was in building new cars, $4,444 40 in building telegraph, and the balance in buildings, ballasting, fencing, and miscellaneous.

Of the 3d year's expenditure, $19,956 06 was for new cars and the balance miscellaneous.

Of the 4th year's expenditure, $28,421 50 was for new cars, $22,186 27 for two new engines, and the balance miscellaneous—the erection of a machine shop, and tools, and machinery, to the amount of $5,315 02.

Of the 5th year's expenditure, the main items are for ballasting, tools, and machinery.

The effect of heavier expenditure in the previous years is seen in the limited amount of new work in the past year, and it is satisfactory, now that labor and materials have risen so much, that there is no necessity for extensive outlay in construction account.

The managers have endeavored to conduct the business with prudent economy, but have maintained the road and rolling stock, and have improved and made additions, from year to year, as far as appeared advisable for the proper conduct and development of the business.

The coupon interest on the mortgage debt has not been reduced, and there is due to the Trustees for advances the amount of $297,603 73.

The amount of capital invested in supplies at the 10th of May, was $67,697 89.

Had the Trustees operated the road with the view of drawing as much money from it as it was capable of yielding in the past five years, the debt might have been reduced, but the value of the property would have been diminished in very much larger proportion. The road had been very imperfectly constructed, very little ballasting had been done on it, many miles of fencing were needed, and the side tracks were insufficient. Fencing has been completed, a large amount of ballasting and improvement of road has been done annually, bridges have been rebuilt and strengthened, side tracks extended, and depot accommodations improved. 100 freight cars, five passenger cars and two first class locomotives have been added to the rolling stock at rates from 50 to 100 per cent. below present prices. The telegraph has also been built, without which, the business could not be conducted with safety and economy.

The connection at Freeport did not yield the increase of business which had been anticipated, and the road was subjected to unexpected competition on reaching that point. It became evident that the road could not secure a satisfactory business without some independent connection with the Mississippi River. Some of the bondholders availed themselves of a new charter and built the Northern Illinois Railroad as an extension from Freeport to Savanna, on the Mississippi. The Racine road has acquired through that new connection a large accession of business, and is permanently secured in a position at Freeport with two connections to the river, which will always bring a large and profitable business. The business now passing over the road will be seen by the tables annexed to be very large, but so great a proportion of it passes on to the Chicago and Northwestern road, the R. & M. R. R. derives a comparatively limited revenue from it. The market at Racine has not been sufficient to draw the business to it, and the city does not yield the passenger business which is drawn by the Chicago and Milwaukee roads from their larger cities. Racine has shown signs of renewed growth in the past year, and there is good reason to anticipate much improvement in the business it will henceforth yield to the road. The manufactures of the city are all in flourishing condition, labor is fully employed, the wheat market has been steadily sustained, and the lumber business is greater than ever before.

The Northern Illinois Railroad is now being extended from Savanna to Port Byron to connect there with the road to Rock Island, and the line to be extended to Warsaw, below the rapids on the Mississippi. By that extension, a new lumber market will be opened and the coal fields of Rock Island will afford return freight. The line down the river from Savanna when completed to Warsaw, must be a very valuable one, and will have the effect of establishing Savanna as one of the most important points on the Mississippi in connection with the up-river navigation.

In view of the near approach of the time when the road will be redeemed from the Trustees, or be confirmed in their hands to be sold and reorganized, I have given the foregoing review of the operations of the Trustees for the five years ending May 10th.

The equipment of the road consists of 2 coal and 19 wood-burning locomotives; 13 passenger, 7 baggage, 2 mail and express, 313 house and freight, and 44 platform cars. The number of miles run by engines with passenger trains was 185,662; with freight trains, 271,857; with other trains, 8,524—total, 466,043—an increase over the previous year of 101,712. Number of passengers carried 153,415. Tons of freight, 189,595.

The expenses of maintaining the road have been $422 18 per mile, against $368 81 per mile the previous year, but the expense per ton of traffic is in favor of the present year, being 31.6 cents against 34 cents the previous year, or 2.4 per cent. decrease.

Phrenology.

We have received from Messrs. Fowler and Wells, a very handsome phrenological head in plaster, showing the latest classifications of the system, and what are called its "improvement." Those who are interested in the subject of phrenology and have faith in its dicta, cannot do better than possess one of these busts.

The Overland Telegraph Line to Russia.

The Western Union Telegraph Company, who, in conjunction with the Russian government, have this great enterprise on hand, are actively engaged in fitting out an expedition under the immediate supervision of Captain C. S. Bulkley United States Army, for Oregon, the coast of Russian America and the country beyond Behring's Straits, to survey the route of the telegraph line and make other needful arrangements to put the whole extent of the line under contract the ensuing year; and we understand that the projectors of the enterprise are sangnine that the line will be in successful operation between New York, San Francisco, St. Petersburg and London by the middle of 1866. Mr. Hiram Sibley, Esq., President of the Western Union and of the Russian companies, sailed in company with Mr. Collins, the enterprising projector of the Russian American Telegraph line, in the Scotia on the 21st, for Liverpool and St. Petersburg, with a view to complete the arrangements already initiated with the Russian government for expediting the early completion of the line; and we heartily wish them the utmost success.

Saturday, September 24, 1864.

Stock Exchange and Money Market.

Since our last issue the market has been agitated by a number of considerations, and though there has been no panic, yet there is great thoughtfulness and some fear also, among those who have regulated their business by the price of gold. From its lowest quotation last week, it rebounded a few per cent., just as we expected and said it would. On Tuesday it declined from that slight advance, as the news from Sheridan came along, just as every one supposed it would after the meeting of this young General at Harper's Ferry a few days since with Grant. With the tendency downwards of gold, prices of staple articles have fallen considerably, while those of the necessaries of life, for which there is a never-ceasing call, are held as nearly as possible at the rates of gold when sixty per cent. higher.

Yet there are symptoms of returning honesty even among the retailers, though perhaps that is not just the word, since it may be alarm which is causing so many advertisements and show cards to be put forth announcing a great reduction of prices to customers. No combinations, no private arrangements can keep up these prices, if gold continues to fall, and therefore all those who can at this moment make a profit on their stocks of merchandize on hand or any of the leading staples of production, had better not lose the opportunity of disposing of them. We have seen no reason to change any of the views we have lately expressed on this subject, and they are not ours only, but those of the most reflecting men of the day. They may be summed up as follows:

1st. The diminution of imports,

2d. The large increase of exports,

3d. The diminution of the demand of gold for customs duties,

4th. The important successes of the Union armies and navy, with the large and voluntary enlistments in both services,

5th. The increasing demand for our securities on the continent in spite of the opposition of the London *Times*, are a demonstration that the power of gold is departing, and that the scarcity of a single commodity does not radically affect the confidence of commerce in a country which is one of its greatest supports and always likely to be.

There is a settled conviction everywhere that the Union is to be restored. Those who have been most opposed to the war, to our unavoidable financial system, (one of the most daring, sagacious and necessary the crisis considered, which the world ever saw,) are agreed on sustaining the Union at all and every cost. Whether a peace man so called, or otherwise, no one now pretends to advocate a dislocation of the Union, "our vital frame," and this sentiment understood, is the imperishable guarantee of our financial responsibility, our increasing resources, our good faith, and our fidelity to our institutions, and this is perfectly understood on the continent if it is not in England.

Beyond all question a peace is not far off. The North wish it from really kind and humane feelings such as it always has entertained throughout this struggle, commenced by its misled brethren of the South; and the South with the exception of a few desperate leaders, whose violent despotism from office is already proposed within their own hearing, has found out it has made a grand mistake, without succeeding in a single point for which it madly drew the sword.

A reconstruction of the States under the constitution, the simplest thing in the world, while it may leave them their domestic institutions *in statu quo ante bellum*, will find them with those institutions so changed and so valueless, accompanied by vain sacrifices of so much greater interests, that it will be perceived with the greatest clearness the dreadful mistake it has made.

Peace henceforward will never have the one disturbing element to endanger it, and with the wonderful staple which the South raises in vast quantities, will in a few years be a further guarantee that its cultivation shall not again be so foolishly interrupted. We say again therefore, that American National credit is sure to be once more in the ascendant, never we hope to be disturbed,

by any class of citizens; either those who have tried to destroy it in the field of battle, or would depreciate and ruin it in the street.

In connexion with this subject we may very properly cast our eyes across the water, and see what are the signs of the Money Market there. While millions and millions of dollars are coming here from Europe to be invested in the securities of a country which is able to carry on a gigantic war out of its own resources, is gaining every year enormously in population and industrial wealth, that is to have before the year 1890 one hundred millions of inhabitants, we see everywhere signs of pecuniary embarrassment, in the transatlantic Money Market. In England which in finance and commerce takes the lead in Europe there is a growing alarm, not by any means of trifling extent as we learn by the latest arrival.

We quote from a late journal other than the *Times* which says: "The Money Market must be considered as still tight and *likely* to remain so, as a demand for silver for India, and gold for Alexandria is springing up." "The Bank of Amsterdam has raised its rate of interest from 4½ to 5 per cent.," and the Bank of England asks 9 per cent. Many suspensions have accordingly been announced, and many of them for large amounts. Consols have fallen more than at any previous period in several years. And as we have on a former occasion stated, the Spanish Treasury is bankrupt. France alone maintains any steadiness in her Money Market, because she has not entered into commercial speculations of any extent, yet recurrence to new loans to meet the expenditures of the Imperial Government, and to patch up old deficiencies is of necessity, even now a part of her policy.

We by no means exaggerate the panic which has set in in England. The whole commercial power of that country hangs on the solvency of the Bank of England, and the amount of coin and bullion it is able to retain. In spite of all the specie remitted to England, it does not and cannot keep more than a limited quantity, and what it sends to the East remains there. For the East is no great consumer of British fabrics, not such as we were or are now. The cotton obtained in the United States was paid for by British manufactures with a heavy profit put into the price. The Egyptians, Chinese and Hindostanees do not want the staple articles of Leeds, Manchester, Sheffield, or Birmingham. We should not at all be surprised therefore, as the prospect of a peace and the restoration of the Union becomes more clear and defined, if there should be a general stoppage in England, not only of banks but manufacturers.

Having in some recent remarks alluded to the doubtful truth of the received theory of the balance of trade, we here take pleasure in quoting part of a communication addressed to us on that subject by an eminent authority whose opinions have frequently of late appeared in our columns. He remarks:

"If you ship to England a cargo of flour, which shall cost you in New York ten thousand dollars; and receive in return therefor, a cargo of salt and coal that shall be worth in New York $12,000, the balance will denote the profit derived to you from the venture; and hence though the balance of the trade seems to be $2,000 against New York and in favor of England, yet the balance will truly denote the amount which the traffic has created in favor of New York. A similar principle applied to all the imports of a country, will manifest the net proceeds of all the exports; and hence the gain of England during the last year has been $250,000,000—that sum being the excess of England's imports over England's exports. Nothing is more contradictory to our nature than to suppose any nation will continue a course of trade in which the exported articles shall sell for less than their cost in the exporting country; and still this absurd result will ensue when we assume that the excess of imports is a measure of the loss on the exports.

"Whenever we are brought in our reasoning to any such an absurd conclusion, we may be certain that we misunderstand the question in controversy. The balance of trade, therefore, as anciently discussed, related only to the loss or gain of mercantile profits. A trade was deemed adverse to the interests of a country, when it required an export of specie; and a trade was deemed beneficial when it resulted in an importation of specie. The principle was founded in the condition of countries whose money consisted of specie only; and hence every export of specie produced a money pressure, with all the sad consequences of a curtailment of business; a given amount of money and a given amount of business having a necessary relation to each other. So the import of specie was beneficial by increasing the money of the importing country, and thereby enlarging its mercantile transactions.

"In our country, and especially in our day, when specie is no longer money, the balance of trade, in its above restricted sense, possesses no applicability to us; though it still possesses some applicability to England, France and other countries, whose paper money is convertible on demand into specie. We accordingly find in England that any large export of specie is immediately attended with a stringent Money Market; and the stringency keeps augmenting till the evil becomes cured thereby."

"When we shall again become a specie paying country, the loss and gain of specie will affect us as it now affects England, and as it formerly affected us. The exports of the gold of California never disturbed our Money Market so long as the export was confined to gold which formed no part of our money, and this was the condition of a large portion of the gold produced in California; *it was exported before it became money.*

"We see therefore, that no reason exists why England should not increase in wealth though her imports greatly exceed her exports; and indeed the excess of the imports is probably no small or bad indication of what she gains in wealth by her foreign commerce, and the like may be said of our own country and indeed of every country."

This philosophical view of the subject certainly disarms the balance of trade theory of all its terrors.

Government stocks are in good demand at higher and advancing rates. There is a large inquiry for 5-20's at full rates for foreign account. They are now ruling at 110@111 per cent. Treasury certificates are steady at 94⅜, the old 7-30's are sold at 111, and the new 7-30's are being absorbed at the rate of a million of dollars per day. This with the other fact of the large returns from the customs and internal revenue, is conclusive that the Government is sure of obtaining without trouble and no great delay all the money it wants, and no administration ever yet broke down having ordinary capacity, which could keep its Treasury vaults and its military chest well supplied with money. Railway shares are for the present not very active. The class of operators known as bears when they fail in one place resort to another, and their combinations while they are often successful in the street, are no sort of guide to the real merit or demerit of any kind of property. The railways were never doing better, were never better managed, and their future never was brighter. If their quotations are not as high as they have been, this circumstance has no kind of relation to their real value.

The Money Market is pronounced easy; yet 7 per cent. is the price of money, even an unquestionable security, while commercial paper has to submit to 1 per cent. per month, and it is taken with reluctance as a general rule, for a general fall in prices is looked for, and this will be the destruction of many of the very adventurous and speculative houses.

The balance in the Sub-Treasury on Tuesday was $19,410,964.

The week's export of domestic produce and miscellaneous goods was of the value of $5,148,484, against $2,646,866 the same week last year.

Foreign exchange is actually at this moment below par in gold. The best merchant's bills founded on actual shipments can be had at 8⅛. It does not pay to ship specie at this price, and any remittances of this article at the present moment must be accounted for on some other principle than a commercial one. No doubt the speculators frequently lose on their shipments in order to make gold scarce in the street, and so keep up the price.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

☞ We give elsewhere, from the *N. Y. Herald*, an interesting account of a new atmospheric railway recently inaugurated in London. The road, though but about a third of a mile in length, is considered as deciding the success of this style of transportation. The tube or tunnel through which the trains pass runs under ground, and is about eleven feet in diameter. The propulsion is effected by exhausting the tunnel of air, and then, as soon as the cars are started, allowing it to rush in at that end of the tunnel which is in their rear. A speed equal to about twenty miles an hour has been attained.

☞ At a meeting of the Board of Directors of the Manhattan Life Insurance Company, held recently, the following important resolution was adopted after mature consideration:—"There shall be added to each policy issued, or hereafter to be issued, the following words:—'This policy is incontestible after five years from its date, for or on account of errors, omissions, and misstatements in the application, except as to age.'" No other American Company, we believe, offers this important advantage to insurers. All policies in force five years at once become incontestible, under the operations of this rule, greatly enhancing their value to families and creditors.

Allentown Route.

By reference to the advertisement of the Central Railroad Company of New Jersey, in another column, it will be seen that two daily express trains for the West are now run, leaving Pier 2, North River, at 9 A. M., and 7 P. M., with but one change of cars to Cincinnati and Chicago, and but two to St. Louis. The advantages claimed for this route are that passengers can leave New York two hours later than by any other line, and arrive at all the principal points West at the same time. The sleeping cars on this line are said to be the most elegant in the country.

☞ We invite attention to the advertisements of Messrs. Wed W. Clarke & Co., "Petroleum Exchange Office," No. 10 Pine St., New York.

Interest and Dividends.

The Interest coupons of the first mortgage bonds of the Chicago and Great Eastern Company due 1st Oct., will be paid on and after that date (less Government tax), on presentation at the Banking office of Messrs. Schuchardt & Gebhard, No. 21 Nassau street.

Coupons of the first mortgage bonds of the St. Louis, Jacksonville and Chicago Railroad Co, due Oct. 1, 1864, will be paid on and after that date at the office of M. K. Jesup & Co., No. 59 Exchange Place, New York, less Government tax.

☞ The aggregate subscriptions to the seven thirty currency loan registered at Washington up to Tuesday afternoon, Sept. 20th, amounted to $36,697,200, and to the ten-forty loan $81,097,900.

☞ The trustees of the Petroleum Stock Exchange have secured a large room on the ground floor of the building occupied by the Public Board of Brokers, Broad street, for the purpose of the Exchange.

☞ The new tariff of railroad rates on goods going Westward went into operation on the 20th inst. The advance is equal to about twenty per cent on the former scale.

Railroad Earnings--Weekly.

The earnings of the Chicago and Northwestern Railroad for the 2d week in September, 1864, were $157,635 97
Same period last year 104,533 92

Increase $47,102 05

The earnings of the Racine and Mississippi and Northern Illinois Railroad for the week ending Sept. 7, 1864, were:

	1864.	1863.
Passengers	$3,450 12	$2,055 43
Freight	9,394 67	8,659 16
Express	104 16	75 00
Mails	296 58	296 58
Total	$13,245 53	$11,086 17
Increase		$2,159 36

Receipts from January 1st to Sept. 7:

1864 ..... $381,750 32
1863 ..... 236,185 56

Increase $145,564 76

The earnings of the Marietta and Cincinnati Railroad for the 1st week in September:

	1864.	1863.
Passengers	$12,983 06	$5,714 80
Freight	8,370 50	9,604 90
Mail, express & telegraph	1,119 58	1,040 00
Total	$22,473 14	$16,359 70
Total this month to date.	22,473 14	16,359 70
Total since Jan. 1	$663,784 84	$420,787 31

The traffic of the Great Western Railroad for the week ending Sept. 9th, 1864, was as follows:

Passengers $41,911 12
Freight and live stock 22,232 42
Mails and sundries 1,231 21

Total $65,374 75
Corresponding week of 1863 ..... 54,787 22

Increase $10,587 53

The earnings of the Grand Trunk Railway for the week ending Sept. 10, 1864, (including the receipts of the Montreal & Lake Champlain and Buffalo & Lake Huron Railways) were: $124,129 00
Corresponding week, 1863 ..... 98,269 00

Increase $25,860 00

The earnings of the Michigan Central Railroad for the 2d week in Sept., 1864, were $84,349 68
Corresponding week of previous year 64,967 06

Increase $19,382 62

The earnings of the Chicago and Rock Island Railroad for the 2d week in September, 1864, were $76,160 00
Corresponding week of previous year 48,737 00

Increase $27,423 00

The earnings of the Michigan Southern and Northern Indiana Railroad for the 2d week of September, 1864, were $85,708 00
Corresponding week of previous year 66,747 00

Increase $18,961 00

The earnings of the Toledo and Wabash Railroad Company for the second week of September, 1864, were $52,817 00
Corresponding week of previous year. 23,477 00

Increase $28,340 00

The earninings of the St. Louis, Alton and Terre Haute Railroad for the first week in September, 1864, were $49,868 76
Corresponding week of previous year 20,446 34

Increase $29,422 42

The earnings of the Chicago and Alton Railroad Company for the week ending Sept. 15th were:

	1864.	1863.
Passengers	$11,499 52	$16,290 85
Freight	52,704 65	30,226 40
Sundries	1,509 23	3,682 56
Total	$85,713 40	$50,199 81
Increase 1864		$35,513 59

Railroad Earnings--Monthly.

The earnings of the North Pennsylvania Railroad Company for the month of August, 1864, were $74,281 38
Corresponding month last year 49,597 63

Increase $24,683 75
In first 9 months 548,960 22
Same time last year 365,365 09
Increase 183,395 13

The earnings of the Erie Railway for the month of Aug., 1864, were $1,085,364 58
Corresponding month last year 737,092 48

Increase $348,272 10

The earnings of the Pittsburg, Fort Wayne and Chicago Railroad for the month of August, 1864, were $669,102 44
August, 1863 ..... 407,076 75

Increase $262,025 69

Earnings from Jan. 1 to Aug. 31:

1864 ..... $4,127,543 97
1863 ..... 3,209,669 05

Increase $917,874 92

The earnings of the Norwich and Worcester Railroad for the month of August, 1864, were $68,410 00
Corresponding month of previous year. 42,579 00

Increase $25,831 00
The receipts since 1st Jan., 1864, are. $416,638 00
Same time in 1863 ..... 259,534 00
Gain (64½ per cent.) $157,104 00

The earnings of the Hannibal and St. Joseph Railroad for the month of Aug., 1864. $132,605 48
Corresponding month in 1863 ..... 89,045 65

Increase $43,559 83

Pneumatic Railway.

This week has been made memorable by the most important experiment in locomotion since the first opening of a railway. This has been the successful commencement of a new railway—one to be worked without horses, locomotives, stationary engines or water power. And what power then? you may ask. Why the pneumatic, to be sure—the atmospheric air as a motor.

I will not go so far as to predict that the days of locomotives are over, or soon to be among the things that were; but one thing seems certain, and that is that for short lines, where a large traffic is required, lines in cities, and lines under rivers and up and down steep ascents, the pneumatic propulsion must take the place of both locomotives and horses. As a power under such circumstances, it is far more economical, more efficient, more comfortable, and will give travelers an almost entire immunity from accidents and casualties.

The pneumatic principle—using air as a motor, is not new; but this method of applying it to railways is quite new—the patented invention of Thomas W. Rammell, Esq., of Bridge street, Westminister, a civil engineer of high standing.

Former pneumatic, or "atmospheric," railways, as they were termed, were worked by means of a cylinder and continuous piston, some twenty inches in diameter, under the carriages, between the rails. The power was connected to the train by a valve and slot; but it was impossible to prevent great loss of power by leakage, and after one or two trials it was abandoned. In Mr. Rammell's pneumatic railway the "cylinder" is the railway tunnel, and the piston is the train itself. One carriage (or car), known as "the piston carriage," has a projection or disc of metal, the outer edge of it being a soft substance, like a brush of bristles, and this comes in contact with the brick work, or other material forming the inside of the railway tunnel, touching all around, sides, top and bottom, and thus excluding the air. It is not actually airtight, like a piston rod in a piston, but practically the leakage makes no material loss of power.

Then the pneumatic machine or grand wheel of Eolus, that "raises the wind," is stationed near one end of the railway tunnel, and is moved by a small stationary engine, or any other power. The first pneumatic railway experiment on this principle, you are aware, was a small line, about three feet in diameter, for carrying mails and parcels, and that has been in operation from the Easton (London and Northwestern) Railway terminus to the Northwest District Post Office, in the northwest port of London. That has been in successful operation, carrying the mails twenty or thirty times a day, for over a year and a half.

Next, a line for goods and mails, about five feet in diameter, has been built under the streets, like the smaller one, to carry the mails to and from the general Post Office, St. Martin's le Grand and that is soon to be opened. It will also connect the London and Northwestern Railway with Chapin & Horne's (the great railway carriers) premises, in Gresham street, near the Bank of England. That line, besides carrying the London mails between the Post Office and the railway, will transport one thousand tons of goods a day between the heart of the city and a suburban railway station (Camdentown), and all through a single cast iron tube, and with one stationary engine.

The passenger line opened this week is about six hundred yards—say a third of a mile—in the Crystal Palace Park, and is between ten and eleven feet in diameter—not nine feet by ten as erroneously stated by some of the newspapers—and will take in a Great Western (broad gauge) train, and transport it from one end to the other. The line has been purposely constructed with all the disadvantages that any railway is liable to—neither straight nor level, but with a very sharp curve, and up a steeper incline (one foot in fifteen) than is practicable for any locomotive to work. The trains are blown through in one direction, and then sucked back on their return, the power working equally well in each direction. A great deal of nonesense is talked and written about the pneumatic railways, like the trains being "shot through," or working by a vacuum. Now, be it known once for all that a "vacuum" in working a pneumatic railway is both useless and impossible. Take the train when it is sucked through, and what is the process? Why, precisely the same as that of a boy sucking a pea or a bullet through a hollow reed. The train stands at the farther end of the tunnel or tube, a quarter of a mile from the pneumatic machine. Then the air is sucked by this powerful apparatus out of the tunnel. Of course, as the air is gradually drawn out—the other end of the tube being closed by the train—the atmosphere becomes rarified, or attenuated, and this process goes on a second or two till the air in the tunnel is made thinner—rarified—by about one per cent, and the pressure of the surrounding atmosphere outside (equal to fourteen pounds to the square inch) then presses or drives the train into the tunnel, and the sucking process going on all the time, the train runs its third of a mile in some forty-eight or fifty seconds—eighteen to twenty miles an hour. On lines of any length fifty miles an hour will be attained with ease.

The carriage is lighted by lamps that give a brilliant light; and, having none of the gases or smoke or the heavy jolting that attends the passage of a locomotive in a tunnel, the passenger glides along with the most luxurious ease imaginable.

The ventilation of course is perfect the whole train being swept by a gale of pure atmospheric air every time a train passes.

This solves the problem of underground railways fully, and Parliament is to be applied to this winter for power to build several lines under London—one to go under Oxford street to the Bank from the West End.

This invention gives you the way to solve the great problem of city traffic in New York. A pneumatic railway under Broadway is entirely feasible, and can be made at once the cheapest, most comfortable and most rapid mode of transit from one end of New York island to the other. I will give more of the mechanical details in another letter.—*London Correspondence N. Y. Herald.*

Prospects of the Upper Peninsula of Mineral Michigan.

We recently spoke of the prospects of our iron mines, and alluded incidentally to those of the Upper Peninsula generally. The subject will bear a more extended discussion.

Up to this time but three mines have produced to any extent, and those situated side by side, and but little thought has been given to iron ore elsewhere, even when its existence has been known. As a natural consequence, the whole growth of this region has been confined to the few localities around these mines and the furnaces near them. Everywhere else has been an undisturbed wilderness, and the land unentered. Now this is changed. The great profits of iron mines has made remote iron locations to be sought for, and mines will soon be opened in other and distant parts. A new mine will soon be worked south of Keweenaw Bay, and we have seen, recently, bog ore, containing 50 per cent. of iron, that will pay for working, coming from the neighborhood of Grand Island. On the Peninsula Railroad, and the extension of the Bay de Noquet, we have already spoken of several new mines, and more we are confident will soon be found, as every day developes new indications of iron in the neighborhood of Lake Michigaumie. Nor is this all. Many who have paid much attention to the country are inclined to the belief that in the region of the Monomone River are iron mines richer than any yet known. This region has been as yet imperfectly examined, but it will not long remain an *incognita terra.*

If iron exists in all these different places, as we do not doubt, there will soon be a way to reach them. One good iron mine will pay to build a railroad to it, if it is fifty miles distant; but in all these cases it will not be *one* but *many* mines that will call for means of transportation. We believe a railroad extending west from Ford River thirty or forty miles would soon be one of the most profitable investments in this country, and sooner or later it will be constructed. Those who first make the move will be the lucky men.

If all these mines are opened of which we speak, all know the certain results. Furnaces will spring up around the mines, and along the railroads—and wood land, now worthless, will be worth $10 an acre. A glance at the map will show how much territory still unentered, to a great extent, will be made valuable by the railroads now commenced. In a few weeks the Peninsula road will be completed to its connection with the Bay de Noquet, and the latter be extended to the St. Clair Mountain, and another ten miles of extension begun to Lake Michigaumie. A few years hence, and a very few, and we shall witness a railroad through to the Portage and Ontonagon, and settlements all along the line.

It has always been said that agriculturally this region is worthless. We are not quite prepared to admit this. We know we have not such soil as Illinois, and especially on the coast, it is sandy and light; but farther back it improves, and we doubt not there will be good farms in the Upper Peninsula, where potatoes and other vegetables, good grass and oats can be profitably raised. All this has been done south of Ontonagon, and can be done in the region south of Marquette.

It should not be forgotten, too, that grants have been made for railroads connecting Superior City and Bayfield with the Mississippi, St. Paul, and all that region so full of supplies, which we should be as glad to receive as they sell to us, at much lower rates than we have paid heretofore. Within the last fortnight a drove of cattle, driven through the country, passed down from Superior City on a steamboat to the Sault.

But let us not forget our neighbors of the copper region, whose prosperity has just dawned. Not one acre in a thousand of good copper land has been touched, and the soil is yet unbroken over better mines than the Quincy or Cliff. In fact the great richness of this wonderful copper deposit has but just begun to be understood. A few years hence and we shall see good roads, prosperous villages, and dividend paying mines from Keweenaw Point to far west of the Porcupine mountains.

Have we not reason, then, to think highly of the prospects of the Upper Peninsula.—*Lake Superior Journal, Sept. 2.*

Peninsula Railroad.

The Peninsula Railroad Company is fast pushing its road to completion. Its opening will be the commencement of a new period of prosperity to the mining interests of the northwest. For a year or more the company have been constructing their line from the lower terminus at Escanaba, on Lake Michigan, a distance of about 70 miles, to the iron mines of Lake Superior. This work has been steadily pressed forward, in spite of formidable obstacles, until now it is near its completion, and in a few weeks more the cars will be running the whole distance. This road, when completed, will take the whole passenger traffic to the Lake Superior regions, already very large, and will also become the chief avenue of supplies to the rapidly increasing population engaged in mining. But the main design of the projectors was to furnish such a means of transportation for the iron ore of Lake Superior, to the waters of Lake Michigan, and so to the various ports on the lower lakes where this ore is in demand, as would at once save the time consumed in the passage through the Straits and Sault St. Marie Canal, and also the hazards of the Lake Superior navigation, difficult and dangerous at nearly all seasons of the year. The iron ores of Lake Superior are so rich, and produce iron of such excellent quality, that at present all the iron masters of the country deem it necessary, whenever practicable, to mingle with their own ores a percentage of the Lake Superior ore, in order to produce an article that can maintain itself in the market. Two hundred and fifty thousand tons have been mined the present season, and before the close of navigation, will have been shipped from Marquette to Chicago, Detroit, Cleveland, Buffalo, and the various lower lake ports, and thence into the interior of the States adjoining those lakes; and we are assured that the consumption of the ore would be trebled, and even quadrupled, were the present means of supply equal to the demand. The demand for this ore promises to be limited only by the consumption of iron, for it is found that Lake Superior ore can be purchased, shipped all the way to Pittsburg, and there manufactured at a saving of *twelve to fifteen dollars per ton* over the cost of iron produced from neighboring ores of Pennsylvania, while at the same time, in consequence of the richness of the ore, the furnaces will turn out, with the same expenditure of labor and fuel, over fifty per cent. more iron in a given time. In view of these facts, several gentlemen interested in the Peninsula road have taken measures, not only to increase the means of transportation, but also to meet the great and increasing demand for ore. They have purchased all the mineral lands of the St. Marie Canal Company, some 34,000 acres, upon seven different sections of which, adjacent to the Peninsula road, or within a short distance from it, they have discovered deposits, or rather immense hills and cliffs of iron ore, far transcending in extent and value any hitherto opened. They have organized a company under the name of the Iron Cliffs Mining Company, with a large cash capital, and are already opening these mines and preparing immediately to ship ore in quantities to meet the largest demand. It is believed that this single company will be able to supply an amount of business to the Peninsula road very nearly equal to its utmost capacity. The Peninsula Company also possess a land grant of over five thousand acres per mile. This land is all of it covered with a heavy growth of timber, mainly hard wood, and exceedingly valuable for charcoal to be used in reducing the ores found in the vicinity. The company anticipate that these lands will eventually pay the whole cost of the road and equipment, leaving the property entirely free to the stockholders. The stock has been quoted at the exchange for some time, but of its merits little has thus far been known.—*N. Y. Tribune.*

New Through Route from Chicago to Lake Superior.

The Chicago *Tribune* announces the recent opening of two new routes of travel and commerce between that city and Lake Superior, viz: that to Madison, Wis., over the Beloit division of the Chicago and Northwestern Railway; and that to Lake Superior by the Peninsula Railroad. "A party, consisting of the chief executive officers and directors of the Northwestern Railway Company, with a few invited guest, after themselves laying the last rail, rode over this new road to the capital of Wisconsin, direct from this city. After remaining there a short time, the party left for Green Bay, over the road to Milton Junction, and thence by the North-Western. At Green Bay the party embarked upon the fine new steamer the George L. Dunlap, built expressly for this route, for Escanabe, the terminus, upon the waters of Green Bay, of the Peninsula Railroad. The cars of the Peninsula Railroad carried the excursionists to Marquette, upon Lake Superior. The party visited the new mines about being opened by the Iron Cliff Mining Company. It is confidently asserted that nowhere upon the face of the globe is there so much wealth of iron ore upon an equal area as in these mines. They will be connected directly by rail with the Peninsular road, and thence, by steamers, with the North-Western at Green Bay. Untold wealth will thus be speedily poured into the capacious lap of Chicago. It is well that our prairies are large, for we shall need room. To show the value of this new route, it is only necessary to mention, that leaving Lake Superior at one o'clock in the afternoon of Saturday, stopping an aggregate of twelve hours on the way, they reached this city at five o'clock on Monday morning."

☞ The Norwich and Worcester Railroad Company is now free from debt, except $59,000 bonds which do not mature till 1874.

☞ The wheat crop of Minnesota is stated to be two million and eight hundred thousand bushels in excess this year over that of any previous crop.

☞ The passenger receipts of the Western Maryland railroad for August were $4,919 20, being an increase of $1,578 21 over that of the same month of 1868. The total receipts for August is over $9,000.

☞ The Illinois Central Railroad Company paid $178,000 into the Illinois State Treasury, being the percentage of the profits which the company is annually required to pay to that State.

The Lake Superior Mines.

A correspondent of the *Journal of Commerce*, writing from the mining region, says: "What now seems to be of the most vital interest are the rich mineral productions of this region, embracing the south and north shores of Lake Superior. Copper, iron, lead, silver and gold are found to exist, although the mining interest is still in its infancy, particularly in regard to the last named precious metals, which are found on the Huron range of hills lying on the south shore of the lake, between the iron deposits, near Marquette, and the upper range on Keewenaw Point. The field of exploration extends over a hilly section of country for upwards of one hundred miles from east to west, and fifty to sixty miles from south to north, embracing the counties of Marquette, Ontonagon, Portage and Keewenaw, including Isle Royale, to say nothing of the north shore belonging to Canada.

"Already about one hundred copper mining companies have been formed and are in successful operation; twelve iron mining companies, shipping annually 200,000 tons of ore; also, some fifteen silver, lead and gold mining companies, which have just commenced operations. These united mining interests employ an immense amount of capital, and give profitable employment to thousands of workmen.

"The steamers and sail vessels navigating the upper lakes are of a large class, the former carrying passengers and freight, while the latter are mostly engaged in carrying iron ore to Eastern markets. This iron is exceedingly pure and of good quality, much of it being used for mixing with the inferior ores of Pennsylvania and Ohio. The mountains of this ore here deposited alone would make the upper peninsula celebrated for ages, while the copper region is of equal interest, the pure metal being found in large masses. Two railroads will be completed during the present year to run to the iron mountains, one of which will ultimately extend westward to Ontonagon, thus reaching the copper region, and greatly facilitate the transportation of the above valuable metals to eastern and southern markets.

"Geologists seem at fault in this region, it being the practical explorer and hard working miner that discovers and uncovers the rich mineral deposits, being assisted by capital which is fast flowing into the country. The savans also seem to overlook the healthy influence here experienced, giving strength to both mind and body.

"The export of copper, during the year 1863, was 10,043 tons, and the export of iron ore, and iron in bars, &c., was 190,000 tons, both of which will be largely exceeded the present year."

The Siberian Telegraph.

We learn from an officer, who occupies a very high and responsible position under the Russian Government, that the telegraph between Omsk and Irkoutsk is completed. The stations have been fixed, and the line is now in operation. On 21st December, 1863, two despatches were sent from Irkoutsk to the director of telegraphs at the capital. They were started from the former station at meridian, and received at Petersburg at eight o'clock and thirty minutes the same evening—a distance of 5,750 versts, or 3,285 marine miles. As the line was not then in complete working order, the feat may be regarded as worthy of special note. The labor on the Irkoutsk and Omsk portion of the line was commenced early in 1863, and in September of the same year messages were sent from one or more stations to others. In November the line was in working order to Krasnekarsk, and by the 5th of December to Ankan.

During the period of building the line in Siberia, peculiar difficulties were encountered, owing to the depth, width and rapidity of the streams. In some places the wires were stretched along very high posts, sometimes submerged and again run under the surface of the ground. Along and across other rivers the wires were stretched on poles. The materials used in the construction of the work are of Russian manufacture. The electric batteries and apparatus pertaining thereto were made in Petersburg, and porcelain insulators in Derm. Only a comparatively small portion of the wire and water cables were imported. The completion of this grand chain of telegraphic communication between Westernmost Europe and the extreme northeastern point of the Asiatic continent, will be hailed with an enthusiasm only equalled by that of the Atlantic cable.—*Alta California.*

Huntingdon and Broad Top Mountain R.R.

At a meeting of the shareholders of this company, held in Philadelphia on the 13th inst., the joint agreement which had previously been entered into with the Bedford Railroad Company for the consolidation of said companies, and the merging of the corporate rights, privileges and powers of the latter into the former company was ratified by an unanimous vote. The shareholders of the Bedford Company having previously voted affirmatively on the agreement, the consolidation of the two companies may be considered virtually accomplished, and the length of road thirteen miles extended, at a cost of sixty thousand dollars; less than half of the value of the iron on the road acquired. The arrangment is considered a most advantageous one for the Huntingdon and Broad Top, and by working both roads under the same management the business of the roads, the passenger travel especially, will be much better accommodated. The steady development of the mineral resources of this region, through these roads, is giving to both the region and the united road the value and importance their position justly entitles them. The passenger travel has more than doubled, and the coal tonnage has materially increased, at about twice the former charges. The daily production of coal at the Company's mines is about 4000 tons, and could be easily increased if the facilities of the connecting roads eastward were properly increased.

Cost of Sinking an Oil Well.

The cost of sinking an oil well, six hundred feet deep, in Western Pennsylvania, is thus stated by the Pittsburg *Chronicle*:

"One engine, 10 horse-power, delivered on the premises, $2,100; derrick, complete, $150; walking beam, Sansom post and appurtenances, $50; bill wall, bland wheel and belting, $120; One set tools, $300; 1½ inch hawser and 1¼ inch hand pump rope, $150; 600 feet tubing at 92 cents, $570; 50 feet driving pipe, at $350; 500 bushels coal at 60 cents, $300; two engines, say sixty days each at $3, $420; contract to drillers, 600 feet at $2 25, $1,350; one pumping barrel and valves, $37 50; two wrenches at $10 each, $20; one clasp, $5; two 2-inch gas tongs, $15; total $6,067 50. To this add five hundred dollars for contingent expenses, such as accidents in breaking machinery, getting tools fast in the wells, and the charges by professional tool extractors, etc., and there will be less than three thousand five hundred dollars left of the ten thousand dollars. It will thus be seen that where it is intended to put down a number of wells, as proposed by so many of the new companies, there must be a larger reserve fund."

The Connelsville Railroad.

Two railroad bills of especial significance, passed last Spring by the Pennsylvania Legislature, and held unsigned by the Governor, have recently become laws under a provision in the constitution of the State. One of these bills repeals the authority originally granted to the Pittsburg and Connelsville Railroad Company, East of Connelsville, and limits their jurisdiction to the ground between Connelsville and Pittsburg. The other bill incorporates a new company, with authority to build a road East from Connelsville, to connect with other roads leading to the Susquehanna and the Chesapeake. The Connelsville company holds that the bill revoking its charter is unconstitutional, and any attempt to interfere with its franchises will be promptly met by an appeal to the courts. The company, we understand, is doing all in its power now to complete the line to Cumberland.—*Harrisburg Union.*

Northern Railroad of Canada.

It is very gratifying to see this Canadian line improving as it does half-year after half-year.

The 1864 June half-year presents us with an increase in the revenue over June, 1863, of 20.11 per cent., and a decrease in the ordinary working expenses of 5.63 per cent.

These working expenses are now 49.49 per cent, for the half-year against 55.12.

Half-year ending	Gross revenue.	Ordinary worki'g exp.
June 1864	£54,302	£26,879
" 1863	45,195	24,913

The traffic of the Northern Railway of Canada is nearly all local. Out of the £54,302 taken in the half-year only £1,601 comes under the heading of "through." The great mass is in one item "local freight." The climate is hard (the Government perhaps a little harder); the traffic is thin; the postal service miserably paid for; but notwithstanding all, here is a purely Canadian railway, carrying principally heavy goods traffic, working at 50 per cent. or less of its receipts.—*Herapath.*

Cotton from Italy.

An Englishman, who has been investigating the subject, says that from what he has seen of the country, Italy can be made to produce 600,000 bales of cotton annually, of two hundred weight each. The crop this year is expected to amount to from 100,000 to 150,000 bales. The writer says that he found the Government and representatives of all classes eager to promote the cultivation of cotton, but the present circumstances of the country are peculiar, and tend to arrest enterprises which in a more tranquil state of things might be prosecuted with every guarantee of success.

Minnesota Central Railroad.

We understand that tracklaying is being done from Mendota South, as fast as the iron can be got up the river from La Crosse, and Mr. Skinner the agent says the track will be laid to this place before Winter sets in, if the Mississippi don't dry up entirely. Should that be so and the Transit Road to Rochester be completed, with a daily line of stages by way of Rice Lake to Rochester as talked of now, our Eastern mail can come through one day at least quicker than at present. We hope it may be done; what we need is our connection at the State line with the McGregor road which is the highest point at which navigation can be relied upon.—*Faribault Republican.*

WANTED

A gentleman with a capital of $25,000 to take an interest in a Car Manufacturing Establishment at New Haven, Ct. The business is already established, with a large capital invested, and in successful operation. Address this office, or box 2287 P. O., New Haven, Ct.

RICHARD DUDGEON,

MACHINIST,

24 COLUMBIA ST., NEW YORK,

WOULD respectfully inform his friends and the public that he has removed to his new Building **No. 24 Columbia Street**, where he is prepared to furnish

Hydraulic Jacks,

of from 4 to 150 tons lifting power. PULLING JACKS of different sizes.

Hydraulic Presses WITH PLATENS.

Hydraulic Punches for punching iron from three-eighths to 1 inch thick. **Force Pumps** for Hydraulic Presses. Force Pumps for testing tubes, cylinders, etc.

STEAM CARRIAGES for good hard roads.—Squirting Oil Cans, also Denver's Patent Steam Hammer.

New York, Saturday, October 1, 1864.

Trade and Commerce of Cincinnati.

We make from the *Cincinnati Price Current*, a trustworthy and carefully edited commercial sheet, the following abstract of the trade and commerce of Cincinnati for the year ending August 31, 1864:

The report sets out with this statement that "the prosperity of the commercial, agricultural and manufacturing classes has been greater and more general during the past than it was the previous year, notwithstanding the general prosperity of that year." Nor is this "increase of wealth imaginary owing to the depreciation of the currency." Lands and houses have not advanced, so that farmers have been able to add acre to acre at old prices, and merchants and manufacturers to add house to house, of which so many have never before been erected in any previous year, and most of them massive and elegant structures. Cincinnati has accordingly rapidly improved, and though her river communications have been greatly interrupted, yet its business has been enormous. If we consider Covington and Newport as suburbs of the city, the population is at least 250,000.

The receipts of flour, wheat and pork have somewhat fallen off from 1863, but there is a large increase in others.

The value of the leading articles imported and exported is thus comparatively stated:

	Imports.	Exports.
1859–'60	$108,347,216	$77,087,188
1860–'61	90,198,136	67,023,126
1861–'62	103,292,893	76,449,862
1862–'63	144,189,213	102,397,171
1863–'64	389,790,537	239,079,825

The total arrival of steamers was 2,936 against 2,206 last year, and the whole tonnage of these with their barges, was 92,742 tons, against 71,725 tons last year, so that the war has not in this respect damaged Cincinnati.

Money Market.—The Money Market is easy and has been through the year. It is believed that all the paper money and all the coin in the country at the beginning of the war would have been insufficient to have met its expenses, and the "currency had to be increased five fold." The National banking system has proved a great success. The whole number organized is over five hundred, and the whole amount of currency issued does not exceed forty-five millions of dollars. At an early day the Cincinnati Banks rejected the issues of all Eastern Banks, and made the National currency and that of Ohio, Kentucky, and Indiana bankable. The Kentucky and Indiana Banks retired their currency and at times paid a high premium for it, but the Ohio Banks did not. So that virtually the currency was reduced to greenbacks, National Bank and Ohio Bank notes. The stringency in the Money Market was at times, severe, 2 per cent. per month being freely paid by produce speculators during the summer months. The whiskey dealers paid freely in anticipation of the whiskey tax. The demand for exchange has been good, sometimes the supply has been in excess of the demand. The rates in consequence of the healthy action of the National currency were low, being never beyond ⅛ of one per cent., oftener only 1-10th, nearly half the time at par, and often below par.

The Weather and the Crops.—The cold weather and rains in the spring months affected the crops considerably, but of spring wheat there was an average crop. Corn was injured by the dry weather subsequently in Kentucky, part of Ohio, a portion of Indiana, but was good in all Missouri and Iowa, nearly all Illinois and Wisconsin, and the Northern and Eastern portions of Ohio. There is a full crop of oats, also of hay, a partial one of barley, flax moderate, not being very largely sown, potatoes indifferent, peaches a total failure, apples short and poor, and grapes almost a total loss. Of sorghum there was a fair crop.

Navigation and Railways.—The railways leading out of the city eastward have been crowded to their utmost capacity. Traffic on others leading west and south was interrupted greatly. River navigation was suspended in July and the greater part of August, since then it has been brisk. The number of vessels built at Cincinnati the last year has been greater than at any previous year. In 1847–'48 the number was 29, of 10,233 tons.

In 1855–'56 it had increased to 33 vessels of 11,526 tons. In 1859–'60 it was 28, and 6,613 tons. In 1861–'62 4, and 1,745. In 1862–'63 43, and 12,590, in 1863–'64 62, and 20,117 tons. The whole number of steamers running to Cincinnati the last year was 49, with a tonnage of 81,609 tons, and of barges 76, of 11,133 tons, total tonnage, 92,742. It will be seen that this enormous commerce has grown up and flourished, notwithstanding the closing of the port of New Orleans for two years.

Alcohol.—The jobbing price of 98 per cent. above proof has ranged in consequence of the tariff, from $102 in September, 1862, to $3.74 in August, 1864. The wholesale price is 6 cents per gallon lower than the retail. The amount exported the past year has not been much over ½ of what it was in 1861–'62.

The exports for the last five years was as follows: 1860, 27,302; 1861, 43,461; 1862, 52,460; 1863, 15,978; 1864, 6,524.

Ale and Beer.—The high price of distilled spirits has largely increased the consumption of malt liquors. The following table shows the quantity imported and exported for the last five years:

	Imports.	Exports.
1860	6,934	22,581
1861	5,844	20,160
1862	5,361	19,870
1863	8,806	26,063
1864	8,209	31,308

Bark (Tanning.)—The large Government demand has stimulated the tanning business, and prices have ruled higher. Chestnut bark per cord of 128 feet, which in August, 1863, brought $15 per cord, sold for $25, in August of the present year.

Butter.—There has been a decided increase in the receipts of butter. Contracts have been made at 50 cents for delivery this fall, the selling price in August being 47 cents, and in August 1863, 16 cents.

The following table shows the imports and exports of butter the last five years:

	Imports.		Exports.	
	bbls.	firkins.	bbls.	kegs.
1860	15,209	4,468	4,056	48,268
1861	12,395	21,860	2,385	32,046
1862	5,916	14,090	248	9,262
1863	4,408	28,364	977	15,481
1864	11,136	48,754	1,676	18,428

Beef Cattle.—The supply has not been fully equal to the demand, and the high price of corn affected prices of beeves.

It ruled in the last month at $7 per cental gross, against $4 the same time last year.

The following were the imports and exports of cattle, by railways, the last five years:

	Imports.	Exports.
1860	43,182	20,593
1861	40,585	19,357
1862	39,704	23,467
1863	31,915	16,739
1864	39,152	14,903

Barley.—The crop has proved a fair one. The closing price in August was $1.90, and for malt 10 to 15 cents per bushel above barley.

The following table shows the imports and exports for the last five years:

	Imports. bush.	Exports. bags.
1860	352,829	47,580
1861	493,214	29,289
1862	323,884	21,026
1863	336,176	9,157
1864	379,482	9,194

The following were the imports and exports of barley malt for five years:

	Imports. bush.	Exports. bags.
1860	117,593	209,487
1861	70,153	155,779
1862	102,064	125,051
1863	104,724	146,239
1864	153,723	268,882

Boots and Shoes.—A further advance in prices has taken place, being double what they were two years ago, and the business is quite up to what it was before the war.

The following table shows the imports and exports of boots and shoes, in cases, the last five years:

	Imports.	Exports.
1859–'60	58,944	36,281
1860–'61	30,915	10,881
1861–'62	22,401	5,738
1862–'63	42,840	13,538
1863–'64	42,869	25,092

The whole number of houses engaged in the trade, the last five years is 410.

Beans.—The crop has been a very large one, and the imports into Cincinnati very much larger than they ever were before. The price per bushel of white beans in August last was $2.25, 2 cents lower than in August of the preceding year.

The following table shows the imports and exports of beans, the last five years:

	Imports. bushels.	Exports. bbls.
1860	20,852	3,445
1861	23,004	7,567
1862	39,260	12,976
1863	55,490	15,643
1864	77,550	23,956

Bran and Shorts.—These articles being used for feeding purposes altogether, consequently the price fluctuates with the prices of other kinds of feed.

The price of bran and shorts, per ton, at the close of the week ending August 31, 1864, was $22.

The following were the imports and exports the past five years:

	Imports. sacks.	Exports. sacks.
1860	161,638	43,186
1861	153,093	34,663
1862	151,268	24,321
1863	147,240	12,051
1864	129,936	7,793

Brooms.—The trade has recovered from the first effects of the war. The price per dozen good common is $3.

The following were the exports of brooms the past five years:

	Dozens.
1860	24,641
1861	18,147
1862	8,707
1863	12,021
1864	19,945

It will be seen that the falling off in the export trade in 1862 and 1863, which was owing to the war, has been fully regained.

Beeswax.—A considerable amount of this article is disposed of, annually, which is shipped to the East.

The price per pound, in August last was 80 cts.

Cheese.—The following table shows the annual imports and exports, the last five years:

	Imports. boxes.	Exports. boxes.
1860	227,095	172,753
1861	156,583	121,233
1862	103,861	59,545
1863	124,996	71,839
1864	114,167	80,939

The price per lb. in August last was 19½ cents.

Coffee.—Strange to notice there has been a considerable increase in the trade, as will appear from the following table.

The following were the annual imports and exports for the last five years:

	Imports. bags.	Exports. bags.
1860	129,930	90,165
1861	160,688	109,262
1862	117,022	110,258
1863	101,083	104,078
1864	124,759	107,733

Clothing.—The business is largely extended and the profits are large. There are fifty-six wholesale houses, the greater portion of them doing an extensive business, and one hundred and fifty houses, including merchant tailors, engaged in the trade, which is a large increase over former years.

Corn.—We have quoted in the introductory remarks the yield of corn. The demand has been large, and sales were made in August at $1.27 per bushel of 56 lbs., against 60 cents the same time the previous year.

The following were the average prices the last five years:

1859–'60	50
1860–'61	34
1861–'62	31
1862–'63	53 2-5
1863–'64	108¼

The following were the imports and exports of corn, the last five years:

	Imports. bush.	Exports. bags.
1860	1,846,208	48,867
1861	1,340,690	127,269
1862	1,708,292	141,150
1863	1,504,430	265,934
1864	1,817,046	445,260

Cotton.—During the last two years, the receipts of cotton have largely increased, and fully one-half the confiscated Government cotton has been sold here, at auction, the past year. It is hardly necessary to allude to the extraordinary prices paid for this article, as this is a fact fully understood by the masses in this and foreign countries.

The price of middling upland cotton, at the close of August was $1.70.

The following table shows the imports and exports of cotton, the last five years:

	Imports. bales.	Exports. bales.
1860	78,043	71,344
1861	109,806	105,755
1862	29,692	26,985
1863	58,621	45,998
1864	85,741	79,486

Clover Seed.—The price of clover seed, per bushel of 62 lbs,, on the 27th of April was $7.75, an advance from $5.15 same time previous year.

The following table shows the imports and exports of clover and grass seed, the last five years:

	Imports. brls.	Exports. brls.
1860	28,224	16,642
1861	18,673	13,065
1862	9,753	5,579
1863	13,552	6,159
1864	19,982	10,510

Candles and Soap.—The business has fallen off owing to the high price of lard, and the demand has also fallen off, particularly from California and the Pacific Coast.

The following table shows the annual exports of candles and soap for the last five years:

	Soap, boxes.	Candles, boxes.
1860	66,267	175,226
1861	69,836	138,234
1862	113,687	245,997
1863	76,005	263,912
1864	63,078	217,412

Cotton Yarns.—These are now little sought for in the agricultural districts where once they were a necessity, owing to the high price.

The following were the imports of cotton yarns the last five years:

	pkgs.	lbs.
1860	12,841	2,455
1861	13,253	18,353
1862	5,267	1,338
1863	3,478	2,113
1864	6,773	9,691

Cooperage.—Prices have been higher, but there has been a falling off in the supply owing to the deficiency of the pork crop.

The following table shows the imports and exports of cooperage for the last five years:

	Imports. pieces.	Exports. pieces.
1860	216,361	119,572
1861	173,099	121,370
1862	190,350	207,158
1863	152,939	136,597
1864	209,549	102,831

Coal.—Owing to the wise forecast of the City Council of Cincinnati, by getting control of the rolling stock of the coal transporting railways, the price to consumers was kept down to 32 cents per bushel, when in the early part of the season

before the arrangement, the combination price was 80 cents.

The following were the imports of coal, during the last five years:

	Bushels.
1859'–60	17,600,000
1860–'61	12,500,000
1861–'62	8,500,000
1862–'63	8,000,000
1863–'64	15,975,366

The whole amount of coal which was landed the last twelve months, including that brought in by railways, was 15,975,366 bushels, as above. Of this amount 800,000 bushels was Hartford City; 1,772,000 bushels, Pomeroy; 578,000 bushels, Syracuse; 608,000 bushels, Zaleski and other Ohio Coal, brought in by railways, including some brought from Pittsburg by that mode of conveyance; and the remainder Youghiogheny, including 300,000 bushels of Cannel.

Cooper Stuff.—No accurate account can be given of these materials, brought either by rails or river.

Barrel poles were quoted in June at $15 per M., (the latest reported sale,) and barrel staves in August at $18.

Dry Goods.—The trade has increased enormously, merchants from Missouri, Iowa and Kansas, buying largely in the Cincinnati market. The whole number of houses engaged in the wholesale trade is 49, and retail 133.

The following table shows the imports and exports of dry goods and general merchandise, the last five years:

	Imports.		Exports.	
	pckgs.	tons.	pckgs.	tons.
1859–'60	1,153,910	4,404	1,702,220	17,957
1860–'61	978,000	5,120	1,558,700	10,420
1862–'62	1,669,000	10,574	1,817,800	11,264
1862–'63	1,101,800	18,484	1,961,850	9,172
1863–'64	1,418,050	27,499	2,191,975	16,583

Eggs.—These are sold at what is called "Shippers Count," that is to say the count made in the interior by the packers, the buyer taking the risk of breakage. Prices have been considerably higher than last year. The price per dozen, Aug. 31, last, was 19 cents, the same time the year previous 6 cents.

The following were the imports and exports of eggs, the last five years:

	Imports. boxes & bbls.	Exports. bbls.
1860	22,670	8,528
1861	23,579	10,069
1862	17,643	6,293
1863	15,264	4,037
1864	11,471	5,222

Flour.—From October to the middle of April, the market was wholly devoid of animation, prices not having undergone any essential change, during nearly eight months; but the sudden and large advance in the price of gold toward the middle of April, produced a large speculative demand, not only for this but most other articles of produce, and general merchandise; and, during the week ending the 20th of April, prices advanced $1 per bbl., July 20, they again advanced $3 per bbl., and after a temporary decline the advance was maintained. At the present price of gold, (or rather before the late heavy fall,) a barrel of flour only brought $3.90 per bbl. The stock of old wheat is large, and the present crop but an average. (In specie times it ranged from $4.10 to $6.30 in Cincinnati.) The following table shows the imports and exports for the last five years:

	Imports. bbls.	Exports. bbls.
1860	517,229	478,308
1861	490,619	426,625
1862	588,245	460,574
1863	619,710	404,570
1864	547,983	393,268

Feathers.—Prices range higher, and the home consumption has increased. The quotation in August was 80 cents per lb.

The following were the imports and exports during the last five years:

	Imports.	Exports.
1860	5,655	6,824
1861	5,574	5,746
1862	6,496	7,374
1863	5,679	7,751
1864	8,019	7,916

Fruit—There has been a large falling off in green fruit and increase in dried. Of the former apples are not allowed to be retailed in the markets.

The following were the Imports and Exports of the different kinds of Fruit, during the last five years:

IMPORTS.

	Gr Apples. bbls.	Dr Fruit. bush.	Lemons. bxs.	Oranges. bxs. & bbl.
1860	95,811	64,186	10,141	23,793
1861	84,759	91,684	3,716	12,309
1862	98,053	206,403	13,965	13,487
1863	149,758	54,245	10,224	12,357
1864	97,399	77,801	2,283	6,092

Furniture or Cabinet Ware.—Prices have advanced 50 per cent. but but the demand is not diminished, this branch of industry having thoroughly recovered from its difficulties owning to the loss of the Southern trade.

The following table shows the exports of Cabinet Ware and Chairs, for five years:

	Furniture. pcs. & pkgs.	Chairs. doz.
1859–'60	119,014	6,586
1860–'61	11,634	8,151
1861–'62	17,516	5,384
1862–'63	38,452	12,498
1863–'64	39,165	14,515

Ginseng.—This is brought to market in small quantities, the local consumption being light, the demand coming chiefly for China. The price per lb. in Aug. was $1.40, nearly double what it was the same time the previous year.

Hay.—This is the best crop of several years. Its price per ton in August was $24.00, $2 higher than it was the same time last year when there was a deficient crop.

The following were the Imports and Exports of Hay the last five years:

	Imports. Bales.	Exports. Bales.
1860	56,547	3,449
1861	35,214	10,216
1862	58,190	35,278
1863	90,908	59,718
1864	110,946	59,524

Hides.—The range of prices, the past, is higher than it was the previous year, and the demand has been good. The Government demand for leather has been large, which made the tanning business active, and the demand for raw Hides consequently good.

Dry flint hides in August brought 22 cts. per lb. and 18 cts. same time the year previously.

The following table shows the imports of Hides, the last five years:

IMPORTS.

	Pieces.	Pounds.
1860	169,203	91,417
1861	189,032	63,700
1862	159,344	78,795
1863	150,501	32,089
1864	233,177	41,416

Iron.—There has been a further increase in the demand for iron, there being however a decrease in the exports of bar, and an increase of those of pig. The consumption in the city has been large, and the business is in a prosperous condition.

The price of Ohio hot blast Pig, last September, was $38 per ton. By the middle of October it had advanced to $45; the middle of December $55; by the 1st of May $65; and the 31st of August $80, which was the closing price. Cold blast was $5 to $10 per ton above the price of hot blast.

Bar Iron, which opened at 4¼ and 5¼ in September, 1863, closed at 8½ and 9¾ cents—the outside rates for charcoal.

The following table shows the Imports and Exports of Iron, in various shapes, the last five years

IMPORTS.

	Tons.	Pieces.	Bundles.	Pig.Tons.
1860	8,378	397,466	95,488	37,550
1861	8,835	142,997	29,821	23,682
1862	6,756	130,283	34,920	23,762
1863	16,747	146,446	23,130	39,151
1864	28,191	181,791	46,448	44,098

EXPORTS.

	Tons.	Pieces.	Bundles.	Pig.Tons.
1860	6,934	575,268	129,030	4,667
1861	4,281	327,205	107,964	5,143
1862	7,982	258,730	55,550	5,302
1863	13,332	177,278	39,623	4,968
1864	15,832	124,792	36,019	10,826

Linseed Oil and Flaxseed.—The diminution in building diminished the consumption, but the advance in gold took it up again, and so did the high price of foreign oil and flaxseed. The crop of Flaxseed gathered in the West in 1863, proved to be the largest by far, ever before known, and the shipments to the East were very large. From Cincinnati alone, the exports increased two hundred per cent, over those of the previous year. Not only were the shipments large, but they continued on during the summer months, and when the new crop matured the stock of old Seed still in the hands of dealers, in the West, was large, and is still so.

The advance in prices has been gradual, during the year, and did not respond promptly to the advance in gold, which must be attributed to the large supply of domestic Seed.

The inducements to farmers to cultivate Flax, the last two years, have been very great, because not only has the demand for Seed been good, and at high prices, but the fibre has met with an active demand from paper makers, at good prices. This induced farmers to sow largely again, last spring, though the weather was not as favorable as might be desired for it. Still there is no doubt that a large amount has been sown, though the farmers have abandoned the plan of borrowing seed from the crushers, as has been the custom, preferring to occupy an independent position, in the sale of the Seed. As a general thing, the crop has matured well, and prices declined 30 cents per bushel, soon after the new crop came into market, but again advanced.

The price of Linseed in August last was $1.58 per gallon against $1.08 same time last year.

(Continued on page 964.)

Railroad Earnings--Weekly.

The following is a comparative statement of the earnings of the Chicago and Northwestern Railway for the 3rd week in September:

	1863.	1864.
Passengers	$27,970 61	$45,927 06
Freight	83,210 45	106,971 74
Express	1,008 48	1,439 03
Mail	1,286 12	1,405 63
Total	113,470 66	155,743 46
Increase 37 25-100 per cent		$42,272 80

From June 1, to Sept. 21, 1864, (3 months and 3 weeks) the earnings were $1,956,392 66, against $1,255,448.14 in 1863—an increase of $700,944.52.

The earnings of the Racine and Mississippi and Northern Illinois Railroad for the week ending Sept. 14, 1864, were:

	1864.	1863.
Passengers	$2,919 31	$1,988 82
Freight	10,393 66	8,856 24
Express	104 16	75 00
Mails	296 58	296 58
Total	$13,713 71	$11,216 14
Increase		$2,497 57

Receipts from January 1st to Sept. 14:

1864	$395,464 03
1863	247,401 70
Increase	$148,062 33

The earnings of the Marietta and Cincinnati Railroad for the 2d week in September:

	1864.	1863.
Passengers	$11,101 60	$5,487 16
Freight	9,308 74	8,904 50
Mail, express & telegraph	1,119 58	1,040 00
Total	$21,529 92	$15,431 66
Total this month to date	44,003 06	31,791 36
Total since Jan. 1	$685,314 76	$436,218 97

The traffic of the Great Western Railroad for the week ending Sept. 16th, 1864, was as follows:

Passengers	$38,311 60
Freight and live stock	23,585 14
Mails and sundries	1,598 80
Total	$63,445 54
Corresponding week of 1863	61,295 10
Increase	$2,150 44

The earninings of the St. Louis, Alton and Terre Haute Railroad for the 2d week in September, 1864, were $50,219 27
Corresponding week of previous year 33,282 52
Increase $16,936 75

The earnings of the Michigan Central Railroad for the 3d week in Sept., 1864, were $88,972 81
Corresponding week of previous year 66,915 85
Increase $22,056 96

The earnings of the Cleveland and Toledo Railroad for the 3d week in Sept. were $42,766 00
Corresponding week of previous year 34,028 00
Increase $8,738 00

The earnings of the Toledo and Wabash Railroad Company for the third week of September, 1864, were $54,511 00
Corresponding week of previous year. 27,675 00
Increase $26,836 00

The earnings of the Michigan Southern and Northern Indiana Railroad for the 3d week of September, 1864, were $84,707 00
Corresponding week of previous year 64,986 00
Increase $19,721 00

The earnings of the Chicago and Alton Railroad Company for the week ending Sept. 22 were:

	1864.	1863.
Passengers	$29,747 09	$15,293 73
Freight	58,679 67	29,184 80
Sundries	1,478 10	1,344 80
Total	$89,904 86	$45,823 33
Increase 1864		$44,081 53

The earnings of the Chicago and Rock Island Railroad for the 3d week in September, 1864, were $90,185 00
Corresponding week of previous year 56,419 00
Increase $33,766 00

The Illinois Central traffic for the first three weeks this month shows a gain of $285,755 22; the figures are:

Three weeks in 1864	$586,247 80
Three weeks in 1863	350,492 58
Three weeks in 1862	315,936 07

Sandusky, Dayton and Cincinnati Railroad.

The earnings and expenses of this road for the years ending June 30, 1863 and 1864, have been as follows:

Earnings:	1863.	1864.
From passengers	$151,235 46	$184,614 28
" freight	411,774 42	381,072 58
" mail	16,080 00	16,080 00
" express	10,662 04	11,660 58
" car mileage	10,063 21	6,719 94
" storage	64 98	14 78
	$599,880 11	$600,162 16
Expenses, viz:		
Maintenance of way	$130,486 08	$136,039 43
Locomotive power	104,660 86	122,054 29
Machine shop	27,321 23	22,744 44
Train expenses	95,466 70	78,574 10
Station "	63,830 69	63,586 19
Office establishment	42,568 57	39,938 43
General expenses	5,724 31	6,133 62
Loss and damage	1,476 95	2,342 27
	$471,535 39	$466,412 77
Net earnings	$128,344 72	$133,749 39
Interest account	$57,352 31	
Taxes	18,007 63	
		75,359 94
Balance		$58,389 45

Of the total expenditure, there is charged to renewals of rolling stock, $49,021 11; and to renewals of iron, $23,774 39—making a total of $72,795 50. The directors say:—

In the last annual report, the final liquidation of the company's bonds which fell due in 1856, was announced. This completed the payment of all the principal due on the company's obligations, secured by mortgage, a virtual payment of the floating debt having previously been made. The favorable time which it was thought had arrived for capitalizing the various securities of the corporation upon some equitable plan, has, since the date of the last report, been taken advantage of, and a plan agreed upon which, so far as the same has been brought intelligibly to the knowledge of the holders of securities, has been approved almost unanimously. No dissent is known to exist on the part of the holders of bonds secured by mortgage. The concessions to the weaker securities, those resting on the naked "promise to pay" of the corporation, although small, must be considered fair, if not liberal, when it is understood that the mortgages payable in 1866 and 1875 respectively, amounting in the aggregate to two millions of dollars, had both become due by reason of default in interest: A foreclosure might have been insisted on, and the whole property swept off, leaving the unsecured obligations without provision. But a more equitable spirit prevailed, and a plan was agreed upon, after much deliberation, which will be found embodied in "Articles of Agreement," appended to this report. To this agreement I would respectfully call the attention of parties interested, and urge upon them favorable action.

Of the bonds due in 1866, nearly the whole amount have accepted, or will accept the terms of the agreement. A few have not been heard from.

The 1875 bonds, funded in preferred stock, are largely in. There is no hesitancy on the part of this issue so far as known.

The dividend bonds of 1862, and the bonds of 1878, are in by large majorities of each. The State of Ohio was a large holder, and has accepted the terms of the agreement.

The Sandusky City and Indiana stock has with almost entire unanimity come in. And the other claims and common stock have conformed to the terms held out. The desire now is that all interested may without delay avail themselves of the conditions prescribed; and for that reason attention is called particularly to the subject in this report.

I take pleasure in stating to the stockholders that the terms of the agreement have been promptly carried out thus far, and the means of fulfilling all obligations newly assumed remain in the treasury subject to the action of holders of the different classes of securities. The payments made previous to the close of the fiscal year will be found in their proper place in the Treasurer's report. The company is now without any floating debt, and nothing seems in the way of renewed prosperity under the new arrangement.

The gratifying increase of local business was noticed in the report of last year. The evidence is to be seen in both our passenger and freight receipts, and not more in the increase than in the sources. Combinations of rival interests have thrown us (temporarily it is to be hoped off the line of through travel. The same causes have robbed us of much of our through freight, and have diverted from our line the current of government transportation almost entirely. This latter business has been the source of enormous gains to the treasury of some of our roads. Yet, under all these depressing circumstances, leaving the rivalry for through freights to adjust itself as best it might under the impulse of doing the most injury to all concerned by doing things "the cheapest," we are steadily recovering from the lowest point of depression, and assuming our old position, in the steady cultivation and development of our local business. I refer to the marked increase of our passenger receipts for the last two years with less satisfaction than to the steady increase from freighting each month of the past year, with the exception already mentioned. With such sources to draw from, we trust the hopes of steady friends will continue to improve, and be finally rewarded for patient waiting and sacrifices.

The cash receipts and disbursements during the year ending June 30, 1864, were as follows:

RECEIPTS.

Balance on hand, June 30, 1863	$37,321 98
Receipts from transportation	605,623 37
Sale of lands	4,111 67
	$647,057 02

DISBURSEMENTS.

Operating expenses, taxes, etc.	$431,917 88
Renewals, as above	72,795 50
Coupons 1st mortgage bonds	23,629 20
" bonds of 1866–'75–'78	1,536 00
Interest past due bonds	36 12
Sandusky City and Indiana coupons	22,488 14
Dividend No. 1, preferred stock	8,825 51
" on old stock	16 50
Bills payable	3,328 10
Insurance for 1864–'65	2,250 00
Cash on hand to balance	80,734 07
	$647,057 02

The company have 15 locomotives in first class order; 7 second class in serviceable condition, but requiring an estimated outlay of $18,400 to

make them first class engines; 8 third class engines not worth rebuilding, but still in use; 2 rebuilding, requiring an estimated outlay of $4,500 to make them first class; 4 requiring to be rebuilt, at an estimated expense of $10,900. One has been cut up during the year, and materials sold. The rolling stock consists of 15 passenger, 7 baggage and 1 wood train cars; 227 box freight, 37 stock, 55 platform, 48 hand and 20 push cars. Two new passenger cars are about two-thirds completed.

CONDENSED BALANCE SHEET.

Railway	$3,195,994 00

	$5,139,662 25

President.—O. FOLLETT.

Directors.—Theodore A. Neal, Jacob W. Pierce, I. M. Spelman, John P. Yelverton, Elisha C. Litchfield, Ralph M. Pomeroy, William Wilshire, Abm. Cahill, William Warder, O. Follett.

State Directors.—Isaac S. Gardner, Robt. G. Corwin, Rice Harper.

Secretary and Treasurer.—L. H. LATHAM.

Superintendent.—HARVEY RICE.

The Newfoundland Fisheries.

The export of codfish from the island is more than 50,000 quintals greater than to the same period last year. The exports from Newfoundland to the United States during 1863 amounted to £56,997 against £30,605 in 1862. This was independent of about 50,000 bbls herring from the Fortune Bay by Winter herring fishery, which are purchased each season by the Americans. The exports of codfish and cod oil to the United States show a large increase in the value, though not in the quantity, over 1862. In 1862 the quantity of codfish sent to the United States was 12,706 quintals, valued at £8,258; and in 1863 the export of 12,246 quintals was valued at $14,267. The largest export of codfish to any country was 556,650 quintals to Spain; next is 135,728 quintals to Brazil, 78,884 quintals to Portugal; and 56,098 to British West Indies.

Interest and Dividends.

The Pittsburg, Fort Wayne and Chicago Railway Company have declared a third quarterly dividend of 2½ per cent., payable on the 17th inst., at the office of Winslow, Lanier & Co., 52 Wall street. The transfer books will be closed from the 1st to the 18th inst.

The Hartford and New Haven Railroad Company have declared a quarterly dividend of $3 per share, payable on the 3d inst., at the Union Bank.

The Philadelphia, Wilmington and Baltimore Railway Company has declared a cash dividend of 5 per cent. on the capital stock of the company, and have directed the creation of new stock to the amount of 10 per cent., to be distributed pro rata to the holders of the stock on the 1st day of October, to represent the capital heretofore expended in building the bridge over the Susquehanna River and the double track. The government tax will be paid by the company.

The Chicago and Rock Island Railroad Company have declared a dividend of 3 per cent., payable, free of Government tax, on the 10th inst.

The Panama Railroad Company have declared a quarterly dividend of 4 per cent. out of the earnings of the road for the three months ending Sept. 30; and one per cent. out of the earnings of steamers, etc., payable Oct. 6.

The New York, Providence and Boston Railroad Company will pay a quarterly dividend of 3 per cent., free of Government tax, at the office of M. Morgan's Sons, No. 37 William street, N. Y., on the 1st day of Oct.

Interest due Oct. 1, on the mortgage bonds of the New York and New Haven Railroad Company will be paid at the Bank of the Republic.

Coupons of the income bonds of the Chicago and Alton Railroad Company, due Oct. 1, 1864, will be paid at the office of Messrs. M. K. Jesup & Co., No. 59 Exchange place, N. Y., less Government tax.

Coupons due Oct. 1, from the equipment bonds of the Chicago and Northwestern Railway Company, will be paid at the transfer office of the company, No. 8 Wall street.

The October interest on the first mortgage bonds of the Syracuse, Binghamton and New York Railroad will be paid at the Continental Bank.

The Hannibal and St. Joseph Railroad Company will pay the 1st October coupons at the office of Duncan, Sherman & Co.

☞ The shipments of specie from San Francisco to August 30, of this year compare with the exports during the same period in 1863, as follows:

Shipments this year	$38,992,500
Same time last year	29,613,810
Excess	$9,378,690

The receipts of treasure from the mining districts in California continue large. The amount arrived at San Francisco from the interior between the 21st of August and the 1st of September was $1,850,000.

A decision has been lately given by Judge Nelson, of the United States District Court, in relation to the tax on income derived from stock in express companies. The effect of the decision is to put stockholders in such companies on the same footing as regards the income tax as stockholders in railroad, steamboat and other companies.

Reduction in the Price of Coal.

We notice with great satisfaction the advertisement in the last Philadelphia *Inquirer* of the "Consumers' Mutual Coal Company," with a capital of $5,000,000 in shares of $10 each, and an efficient Board of Directors and officers, offering to furnish coal at the moderate rate of $7.50 in Philadelphia. The company has purchased an established colliery about five miles from Pottsville, and all the equipment for producing 150,000 tons per annum of a very superior article of white ash, with the right of operating hereafter to an unlimited extent in the three best mines in Schuylkill County. Subscribers to 10 shares are entitled to ten tons of coal at cost for sixteen years to come, and there is every prospect that the cash dividends of the first two years will reimburse subscribers the entire cost of their stock. We wish the company success, and hope they will open books of subscription in New York as well as Philadelphia; after adding the transportation, there will be still a large saving if not profit to the New York subscribers.

Paterson and Newark Railroad.

The Paterson *Daily Press* states that the whole amount of stock necessary for the organization of the Paterson and Newark Railroad has been subscribed, and the work of building will be let to contractors forthwith. The road will be eleven and a half miles in length, passing in a direct line between the termini, through the villages of Franklin and Belleville, crossing the Passaic River at the last-named place, and passing down its eastern bank to the New Jersey railroad bridge, where it will unite with roads to the South and New York. The amount of stock subscribed is $250,000.

☞ Mr. Roebling is now superintending the construction of another suspension bridge across the Ohio river, between Cincinnati and Covington, Kentucky. The Ohio river bridge will cost, it is estimated, some $1,500,000, and in length will exceed the Niagara bridge some 400 feet. It will be suspended 90 feet above high water, enabling the largest river steamers to pass under it without difficulty.

☞ The following gentlemen have been elected officers of the Boston Stock and Exchange Board: President, H. W. Pickering; Vice-President, George C. Lee; Secretary, W. C. Fisk; Treasurer, Nathaniel Tracy; Standing Committee, James Beck, John J. Soley, Linus B. Comins.

☞ Important notices to holders of Illinois Central Railroad Company's bonds will be found in another column.

☞ The Cincinnati, Hamilton and Dayton Railroad Company propose to increase their capital stock. A meeting for this purpose is called for the 11th of October.

☞ The annual meeting of the stockholders of the Toledo and Wabash Railway Company, for the election of directors, etc., will be held at the office of the company in Toledo, on the 5th inst.

☞ The annual election of directors of the Erie Railway Company, will take place at the office of the company in this city on the 11th inst.

American Railroad Journal.

Saturday, October 1, 1864.

Stock Exchange and Money Market.

In ancient times, Midas a King of Phrygia, as some well known ancient authorities inform us, uttered the imprudent wish that everything he touched might be turned into gold. The wish was granted, and the consequence to him was, that his life became a burden to him. Yet he was in no way improved by his experience. Because he was rich he thought he was competent to give his opinion on all subjects, just as we now see men in the same position affecting the same wisdom. On one occasion, he ventured to give his unsought opinion as to the musical accomplishments of a certain very distinguished personage named Apollo, who has figuratively, his votaries even in our own times, and for this ignorance and impudence he was punished by having his ears so lengthened that they became entirely asinine, and henceforth it was a common remark among the people that Midas had the ears of an ass.

The moral of this story might be well studied just now in Wall street. The operators in gold have for some time past been dealing in gold, wearing gold and eating gold, to the injury of their countrymen and their country. But it has been a most uncomfortable business, and now since the revulsion in the market, it is found out and universally believed, that these persons have had enough of it, and that they have become as much a subject of ridicule, as the gold worshipping Midas with his long ears. The great and sudden fall in the article has ruined many, damaged more, and proved the folly of those who think it the great and controlling object among men. It is not so. Unless there were commerce, industry, production and economy, gold would have no value at all. It is the servant of these and not its master. They who think its possession and retention in large quantities are the chief objects of Government are mistaken; it is purely subordinate as a common standard of exchanges in value, and the counters which pass as tallies in the game of life between man and man. The history of the last few weeks is an epitome of history on a larger scale. The greatest nations this day existing have often gone on for years without a current circulation of gold both in peace and war, and almost without exception in the latter case have been but temporary sufferers. France, England, Germany, Russia, the original thirteen United Colonies have proceeded in their career, with the greatest steadiness, notwithstanding the occasional depreciation of a metallic currency. Spain and Mexico, both at times the largest possessors and producers of the precious metals have actually retrograded under the influence of a plethora in the articles. At this moment, California and the Canadas both overflowing with gold and with silver are no more prosperous than the United States, where at present we have no other circulation than paper. So that we may set down those persons as fitly wearing the appendages of Midas, who think they can control the world, because they have turned as far as they could, every thing into gold.

We hope that common sense is again returning to influence the conduct of our people.

The recent heavy fall in gold is an admonition to all such to change alike their theories and their practices. Gold unused, gold hoarded, is as poor an article as a man can possess, and no finesse or combination can push its power or influence beyond a certain limit. That limit we think, is in this Country close at hand.

The fall in the quotations has been rapid and unprecedented. And why? Is there less currency afloat now than there was in July? The speculators say not. Is it the aspect of our military affairs? Every wise man has foreseen what the result was finally to be. It was a moral certainty as much in July as in September, that the resources of the South in men and means were diminishing at a rapid rate not only, but could not be renewed, because slave labor was diminished one half, and the other half was fleeing from plantation to plantation with its retreating masters; because taxation produced nothing for the confederate treasury, commerce was not only paralised but extinguished, and the meagre supplie

obtained by blockade running, which all civilized nations as well as all authorities on International law pronounce to be felonious, falling off, and when obtained, draining the South by an enormous usury and extortion, and finally that "the cradle and the grave" could not be made to yield up to the battle field, more than it could give. All this was to have been foreseen in July and indeed much earlier, if the gold operators had but chosen to see it.

We do not believe that the spasmodic shipment of gold at a loss can restore the price. What has gone forward recently has been sent by British houses such as Denniston & Co., Pickersgill & Richard Bell; gone under peremptory orders from their correspondents, who do not like the high rate of interest at home, and wish to sustain the Bank of England in order to sustain themselves. We do not imagine that any combination is strong enough to give it one cent's value beyond its legitimate claim. Nor do we regret the misfortunes of those who have dealt in it, for their conduct has been selfish, oppressive and unpatriotic. They have enhanced the cost in the market of the necessaries of life, and have given to the sinking cause of the South its chief hope.

The fluctuations during the past week have been quick and violent. There is a slight rebound after each fall; as we have always supposed there would be from the nature of things, as when the shorts are cornered, and have to submit to terms to meet their contracts. After a few experiences, however, not very pleasant they leave the laws of gravitation to do its work and withdraw their heads if they can from the impending crash.

The fall we have been speaking about had, however its influence on securities. Governments at first declined a few per cent, from which they have recovered, and Railway shares submitted to a much greater depreciation temporarily, which they overcame on Tuesday to a considerable extent. So did the registered bonds of 1881, and the coupons of the 5-20s. Indeed the Treasury securities are always the first to recover themselves, while States and local Banks do not recuperate so quickly.

The money market is easy in a certain sense, but the rate of discount for commercial bills is still very heavy. The paper of all houses having large stocks of goods on hand is subjected to much scrutiny, and is not very popular. The action of the State authorities of Georgia in looking "after their lost rights" or in other words in seeking for some method of seceding from the Confederacy which its constitution so called permits them to do, has also had its effect upon capitalists, who do not know what will come next, like the by-stander who was unexpectedly blown up by a sudden explosion of fire works.

Under these circumstances the most timid find it good policy to keep fast hold of the railways which are all the while earning largely on former years, and will continue to pay dividends, come what may.

The late arrivals bring us the information that the panic in the British money market had somewhat abated. The London *Times* continues its articles so as to palliate every unfavorable symptom, principally by obscuring the truth with regard to this country. Thus, it in its latest issues, t doubts the fall of Atlanta, assumes that a peace is to be made *violently* by its advocates; that we are to have a rebellion in the North, to help the rebellion in the South, and many other things equally absurd. The British capitalists will find out that their reliance on such statements will cost them dear. Nevertheless money is scarce in England, specie is sent out of the country as fast as it comes in, and there is a real alarm as to the consequences, which a drain of sixteen millions of pounds from the Bank of England, would have upon a currency, stated to be in Bank notes of all kinds, and bills of exchange passing about as money and afloat, of the enormous amount at this very moment, of four thousand millions of dollars."

There is a remarkable element of production in this country just now which demands a passing notice. There were exported from this country during the first four months of the year 1862, 3,651,130 gallons of petroleum or rock oil, and these shipments were chiefly made from New York, Boston, Philadelphia and Baltimore, and this came from about 1,000 wells and borings. Since then the number at work is estimated in all the States producing it at much more. The yield is therefore likely to be in the same proportion, and the demand is extending all over the world especially in the tropical climates. Nor is there likely to be any falling off in the supply, for the bituminous coal regions of the United States are already known in eight states, to cover upwards of 62,000 square miles. As the refining of this curious substance is every day becoming more perfect, it also becomes safer in combustion, is more easily transported, and more applied to other uses such as the lubrication of machinery, and the lighting of railway lamps and signals. We see here a new element of wealth, which only adds to the marvel of our resources. When cotton falls to 10 and 15 cents a pound, petroleum will be almost a competitor with it for the exchange products of Europe, Asia and South America. Already it is an article of export from San Francisco to Asia in considerable quantities. That region of the globe is yet to be illuminated by petroleum, transported across the continent over the Pacific Railroad, in metallic casks that defy temperature and transhipment. When the whole export amounts to a hundred millions of gallons per annum as it very probably will in a few years, the dominions of King Cotton will be invaded by a rival of no mean power. For there is as likely to be a product from 10,000 wells as from 1,000. And who can look to the whale fishery for oil on a large scale, when a good well will produce as much oil in a year as can be got from all the whales that are captured in the arctic or antartic seas.

Every thinking person can see what stores of wealth, and what years of prosperity await this restored Union. It seems as if Providence, had poured its horn of plenty over us with a most gracious and liberal hand; gold, silver, coal, iron, copper, lead, cinnabar, zinc, petroleum. It has given us every metal almost in the known world, with scarce an exception but that of tin, all the grains of any value, fruits of the finest flavor, a healthful climate, and natural facilities for transportation happily improved by consummate art. What have we to do but to occupy, and improve these gifts. Is he not a fool and worse who will consent to the destruction of so great a country as this? What a pity that it has been made the sport at any time of mere politicians, and the reckless men who follow them, and that any should have under valued this legacy from our forefathers.

It is our profound conviction that the Union restored, nothing can stop its greatness, which by its wonderous support of liberty, and encouragement of virtuous industry shall yet throw into obscurity the greatest nations of antiquity as well as of modern times. Let no one then despair of the republic, but seek to close its wounds, and these when bound up must no more be re-opened by political empirics, who may kill but never cure.

It is worthy of notice that the prices brought at the auction day goods sales this week, were considerably less than previous existing rates. The fall was from 20 to 25 per cent on articles most in demand. Buyers by holding up a short time will meet with still greater reductions.

The business of the Sub-Treasury on Tuesday was large, and the balance on hand $25,416,978 03.

Sterling Exchange continues to be disposed of at about 108¾ which is under par, and is sold practically at a loss. Subscriptions to the National loans are every where on the increase througnout the Country.

The aggregate value of the imports of general merchandise, other than dry goods and specie, at this port for the week ending September 27, was $1,745,619, against $2,665,655 in 1863, and $2,655,921 in 1862.

The exports from New York for the same week was $4,507,504 against $3,298,900 in 1863, and $8,870,400 in 1862. The shipments of specie since January 1, have been $34,279,000. The exports since January 1, have been $155,528,984 against $130,742,690, in 1862, an increase of $24,796,294 on the same period in 1863. The customs gold revenue at New York, specically pledged to the payment of the interest on the funded and fundable debt of the United States from January 1 to September 24, was $56,214,259.

The value of foreign goods imported into the port of Boston for the week ending September 23, was $790,030, against $251,848 for the corresponding week in 1863. The exports were $652,830 against $224,140 for the corresponding week in 1863.

The foreign exports from the port of Baltimore during the past week were valued at $220,082.

Dighton and Somerset Railroad.

The route of the Dighton and Somerset Railroad has been surveyed within a few days through Taunton, and the location filed with the County Commissioners of Bristol County. The work of building the road will be pushed forward as rapidly as possible.

Pittsburg, Ft. Wayne and Chicago Railway.

OFFICE OF THE PRESIDENT,
PITTSBURG, Pa., Sept. 24, 1864.

Messrs. Winslow, Lanier & Co., Transfer Agents, New York;

DEAR SIRS:—In pursuance of an order of the Board of Directors, please announce that the Stock Transfer Books of this company will be closed on SATURDAY, October 1st proximo, at 2 P. M., and remain closed until 3 P. M., October 17th, and that a dividend of two and one half per cent., (2½) free of Government tax will be paid October 17th, and after, to the registered holders of full paid stock at the time the books are closed. The dividend thus to be paid, was made from the earnings of the third quarter of the year. The earnings and operating expenses as ascertained, and estimated for the first three quarters to the 30th instant, are as follows:

Earnings for January, February, March, April, May, June, July and August, and estimated for September	$4,849,743 83
Operating expenses for January, February, March, April, May, June, and estimates for August and September	2,915,468 84
Net balance	$1,934,274 99

From this balance deduct interest on mortgage bonds, sinking funds and dividends of the first and second quarters as follows:

Nine months' interest on 1st, 2d and 3d mortgage bonds	$656,525 00
Nine months' interest on Allegheny River Bridge bonds	18,000 00
Nine months' sinking fund on 1st and 2d mortgage bonds	78,750 00
Nine months' interest on Chicago depot bonds	5,213 00
Dividend on stock for 1st and 2d quarter—paid	338,065 00
The dividend now to pay is	197,355 00
Total	$1,293,908 00

Leaving a surplus subject to the further order of the Board of $630,366 99 after paying expenses, interest, sinking fund and dividends for the nine months of the year.

The net income for the nine months after paying all charges upon the revenue, excepting dividends, is sixteen per cent. on the present augmented capital, or about seventeen per cent. on the average capital invested during the same period—which is equal to twenty-two and two-thirds per cent. for the year.

The amount expended for construction to the 30th inst. will be about $1,900,000, of which the greater portion will be paid by the money realized from the sale of stock ordered in April last, and which has all been sold.

GEO. W. CASS, President.

☞ We invite attention to the advertisement of GEORGE F. SALTER, Esq., (successor to Geo. S. Rainsford,) No. 51 Exchange Place, New York. Stocks and bonds bought and sold on commission at the Stock Exchange.

☞ The WASHINGTON IRON WORKS, Newburgh, N. Y., are prepared to furnish at short notice portable engines of all sizes from 2 to 30 horse power. The agency in New York is at 55 Liberty street.

☞ We invite attention to the advertisement of the "ELY COPPER MINING CO." in another column.

(Continued from page 947.)

The following were the imports and exports of Flaxseed, the last five ynars:

	Imports. brls.	Exports. brls.
1860	26,307	1,144
1861	19,278	753
1862	18,970	2,117
1863	34,784	3,184
1864	45,107	11,158

As the exports of Linseed Oil come under the general head of "Oil," we cannot give them separately, but give them under the head of "Lard Oil," which constitutes the great bulk of the Oil exported.

Lard Oil.—In common with other articles, the price of this article has ruled high, gradually advancing from week to week during the season, opening at 85 cents per gallon and closing at $1 75—being an advance, during the season, of one hundred per cent. The demand throughout the season has been good, fully up to the supply.

	Imports. brls.	Exports. brls.
1860	433,168	389,310
1861	381,763	309,939
1862	429,036	238,316
1863	160,858	162,007
1864	319,068	210,410

Leather.—There has been an active demand at increasing prices and the business is prosperous.

The following were the Imports and Exports of Leather the last five years:

	Imports. bdls.	Exports. bdls.
1860	19,626	24,018
1861	17,460	24,204
1862	27,788	30,461
1863	31,626	28,024
1864	37,262	40,385

A bundle of Leather weighs 80 lbs. to 100 bbls.

Lumber—The consumption of Pine, and, indeed, all other kinds of Lumber, having been quite large, much more so than had been expected, together with the high price of labor, greatly enhanced the value, and at the same time reduced the stocks, for, owing to the high prices, dealers bought cautiously. The quantity consumed by the Government, in the erection of barracks, hospitals, etc., has been large, and then the demand for building purposes has been much greater than had been supposed; so that notwithstanding the high prices, the Lumber merchants have had another profitable season.

There is no way in which the exact amount of Lumber, landed at this city, can be ascertained; but we find that the whole amount of Pine Lumber yarded during the past year, does not exceed forty millions feet, and that the stock now in yards is about ten millions feet less than it was at this time last year.

The prices paid for Pine, afloat, taking the rafts, as they "run," ranged from $29 to $33 per thousand, which was $12 per thousand over the prices paid during the previous season. A similar advance was paid for all other kinds of Lumber.

The prices of seasoned Lumber and Shingles from the yards at the close of August, the last two years, were as follows:

		1863.	1864.
Clear Pine	per M.	$40 00 to $45 00	$65 00
First Common.	"	32 00 to 35 00	55 00
Second Comm'n	"	27 50 to 30 00	45 00
Third Common.	"	20 00 to 22 00	35 00
Framing	"	25 00	45 00
Poplar	"	25 00	82 50
Shingles No 1	"	5 57	7 00

Lead and Shot.—Prices of these articles advanced largely, in common with other articles, and ruled at the close, fully two hundred per centum above the old prices, that is the prices current before the war.

The price of pig per lb. in August last was 18½ cents., and of shot in kegs of 300 lbs. $68.

The following were the Imports of Lead and Shot the last five years:

Imports.	Lead, pigs.	Shot, bags.
1860	62,069	3,002
1861	51,692	2,356
1862	37,465	3,004
1863	58,765	2,561
1864	52,240	2,331

Molasses.—The trade is far behind what it was before the war. A considerable amount of Sugar-house, or manufactured Molasses, is included in our imports and exports, and it enters into the trade of the city, more so in proportion than formerly, probably, but our quotations are for prime New Orleans, as heretofore, it being the article chiefly sought after for domestic purposes, including the demand from bakers.

A considerable amount of New Orleans was imported during the year, by the old route, namely the Mississippi River—still, the larger portion of the imports came by the way of New York, it being, as a general rule, the safest and best route, owing to the high rate of insurance by the Mississippi route.

The price per gallon in August last was $1.20 and in 1863 same time 68 cents.

The following were the annual imports and exports of Molasses, the last five years:

	Imports. brls.	Exports. brls.
1860	91,807	51,814
1861	71,698	51,776
1862	21,865	28,559
1863	38,034	19,594
1864	33,200	20,782

Oats.—The crop this year is a good one generally though the straw is short. Sales have been made for September delivering at 70@75 cents but in the elevators they are held at 80.

The following were the annual imports and exports of Oats the last five years:

	Imports. bush.	Exports. bush.
1860	894,515	111,823
1861	838,451	134,311
1862	1,338,950	450,851
1863	1,821,000	937,139
1864	1,423,813	851,392

Potatoes.—As compared with the last year there is a falling off in the trade. The price of prime August last was $1.90 per bushel.

The following were the imports and exports the last five years:

	Imports. brls.	Exports. brls.
1860	206,544	97,806
1861	115,720	59,247
1862	91,458	9,255
1863	140,555	49,378
1864	83,910	36,449

Pork.—There has been a deficiency in the pork crop the past year. This is attributed to the deficient corn crop in 1863, and the destruction of swine in Iowa, Missouri and Illinois last winter to an enormous extent, the receipts stopping in December.

The following table shows the average price of Hogs each of the last five seasons:

1859–'60	$6 21½
1860–'61	5 97
1861–'62	3 28 2-5
1862–'63	4 45
1863–'64	7 00½

The number of packing houses in Cincinnati is 39.

Packing, generally speaking, ended at nearly all the smaller places, and many of the larger places, in December, but at Chicago was continued during January, as well as a few other places, in the Northwest, including Milwaukee. In April the complete report was published, together with the average weight and yield of Lard, which showed the following comparative aggregates.

	1862–'63.	1863–'64.
Ohio	991,183	618,836
Illinois	1,472,834	1,273,390
Indiana	585,428	394,217
Iowa	404,861	313,331
Kentucky	130,920	126,019
Wisconsin	201,745	164,576
Missouri	297,611	370,736
Grand Totals	4,084,582	3,261,105
	3,261,105	
Decrease	823,477	

The deficiency was equal to slightly over 20 per cent.

The total crop, though 32½ per cent. less than that of 1862–'3, was 7½ per cent. greater than that of 1861–'2, and 44½ per cent. greater than that of 1860–'61, when the number of Hogs reported packed was 2,164,070.

Provisions.—It is curious fact that the advance in gold saved the pork dealers from ruin.

The following table shows the imports and exports of the articles specified, the last five years:

Imports.

Yrs.	Pork & bacon hhds.	Pork tierc's.	Pork bbls.	Pork lbs.	Lard bbls.	Lard kegs.
1860.	4,662	3,882	25,456	23,250,222	47,499	11,819
1861.	5,136	6,459	37,447	21,912,796	50,362	12,245
1862.	10,082	3,879	46,908	28,708,694	99,085	33,582
1863.	8,443	10,361	47,457	33,215,723	93,707	11,800
1864.	5,353	7,178	41,412	20,169,052	58,328	5,800

Exports.

'60.	52,532	39,833	104,347	345,932	68,658	55,704
'61.	47,801	32,151	121,635	776,571	100,806	46,603
'62.	39,458	40,965	86,363	2,028,303	139,596	61,352
'63.	27,746	53,735	123,900	700,659	144,147	33,699
'64.	34,159	31,549	136,126	1,810,875	82,836	13,028

The price of city cured hams last August was 26 cents per lb.

The following were the average prices the last five years:

Year.	Mess P'k brls.	Prime Trc. lard.	Bacon Sides.	Bacon Should's.	Bulk Sides.	Bulk Should's.
1859–'60.	16 90	10 4-5	9 5-6	7⅞	8 3-5	6 5-6
1860–'61.	16 21	9 1-10	8 4-5	6 5-7	7 3-5	5 3-6
1861–'62.	10 70	7½	5½	4	4 5-6	3 1-5
1862–'63.	12 46	9½	6	4 7-11	5 1-5	4 1-12
1863–'64.	23 29	13½	14¼	10½	10¼	8¾

Petroleum.—The following were the prices at the close of August, the three preceding years:

1861	45c.
1862	28c.
1863	65c.

The following were the imports of Petroleum, including Coal Oil, of which but little is now brought to market, the last three years:

	bbls.
1861–'62	23,000
1862–'63	20,000
1863–'64	49,031

Rye.—The following were the imports and exports of Rye, during the years specified below:

	Imports, bush.	Exports, bush.
1860	131,487	59,177
1861	157,509	69,065
1862	247,187	94,486
1863	138,935	25,415
1864	137,852	24,840

Rice.—The price in August last ruled at $1.60 per bushel.

The following were the imports of Rice the last five years:

	Tierces.
1861	4,257
1862	9,085
1863	9,726
1864	7,964

Starch.—The total amount of starch exported from Cincinnati in the year 1864 was 58,088 boxes of the value of $3.40 per box, and since it has become an article of food the consumption is increasing at double the prices it sold for the last year. It brought in August last 9 cents per lb.

The following table shows the extent of the imports and exports the last five years:

	Imports.	Exports.
1860	36,661	43,054
1861	28,270	33,863
1862	59,758	60,682
1863	28,762	69,248
1864	48,875	58,088

Sugar.—There has been a moderate increase of the trade. A large portion of the imports of raw have been from New Orleans, which consumers prefer to Cuba. The former brought in August 27 cents per lb.

The following gives the imports and exports for the last five years:

	Imports.		Exports.
	Hhds.	Brls.	Hhds.
1860	40,521	37,950	82,433
1861	39,452	46,672	36,054
1862	18,168	87,345	29,377
1863	26,081	71'431	3,098
1864	28,317	66,102	34,599

Salt—The Stock of domestic Salt is very large, the consumption during the last year, for the reason already stated, having been far below what had been expected.

Turk's Island advanced from 60 cents in January to $1 40 in July, and coarse Liverpool from $2 50 per bag to $4 50. The stock of foreign Salt, of all kinds, is light.

The following were the imports and exports of Salt, the last five years:

	Imports.		Exports.	
	Brls.	Bags.	Brls.	Bags.
1860	119,751	61,058	59,046	12,502
1861	110,295	44,603	81,202	12,604
1862	162,857	69,350	87,211	23,703
1863	159,730	75,190	83,563	21,969
1864	157,512	48,808	100,761	8,267

Tallow.—An important advance has taken place in this article in consequence of the price of gold and the falling off in the production of the article itself. The price per lb. in August was 18½ cts.

The following were the imports and exports of Tallow, the last five years:

	Imports.	Exports.
	Brls.	Brls.
1860	7,075	927
1861	7,282	7,434
1862	7,965	11,214
1863	4,905	9,000
1864	5,297	6,561

Tobacco.—The receipts the past summer have been larger than in any previous year:

The following were the imports and exports of all kinds of Tobacco, the last five years:

	Imports.			Exports.		
	Hhds.	Bales.	Boxes and kegs.	Kegs and boxes.	Hhds.	Bales.
1860	6,261	7,239	49,552	49,882	4,074	49,882
1861	14,148	7,001	35,455	43,141	14,232	3,971
1862	31,944	13,147	37,813	75,969	27,955	7,928
1863	33,261	6,981	31,683	65,457	29,736	6,492
1864	53,769	14,669	50,063	82,081	48,277	22,263

Wheat.—The following were the average prices the last nine years:

1855–'56	$1 27	1860–'61	$0 93
1856–'57	1 18	1861–'62	86
1857–'58	77	1862–'63	1 04
1858–'59	1 15	1863–'64	1 14½
1859–'60	1 17		

The price of White, ruled, about 10 cents per bushel above that of Red. All the quotations are for Winter Wheat.

(By this it will be seen that wheat does not bring in gold anything like the price it did in 1855–'6, and that in paper it costs but little more than it then did in gold.)

The following were the annual imports and exports the last five years:

	Imports. bush.	Exports. bush.
1860	1,057,118	321,495
1861	1,129,007	525,065
1862	2,174,924	1,293,680
1863	1,741,491	1,177,108
1864	1,650,759	943,737

Whiskey.—This is an article which has been the subject of great excitement during the past year owing to the vacillating policy of Congress, and the active opposition to its increased taxation by the distillers and operators, in the article.

The following were the average prices the last five years:

1859–'60	20
1860–'61	14 2-5
1861–'62	18¼
1862–'63	37 3-5
1863–'64	$1 02½

From October 1, 1862, till March 1, 1864, the tax was 20 cents per gallon; from March 1, 1864, until July 1, 1864, 60 cents per gallon, and from the latter date until February, 1865, $1 50 per gallon.

The following were the annual imports and exports the last five years:

	Imports. brls.	Exports. brls.
1860	433,168	389,310
1861	381,763	309,939
1862	429,036	238,316
1863	160,858	162,007
1864	319,068	210,410

Wool.—The price of this article has advanced, as the supply of cotton has fallen off. Most of it is now purchased directly of the farmers even before it is sheared. The price per lb. in August last was $1.10.

The following table shows the imports and exports of Wool, the last five years:

	Imports. bales.	Exports. bales.
1860	9,513	10,239
1861	7,040	7,593
1862	11,597	10,597
1863	8,130	9,790
1864	14,005	12,913

Since 1855, the exports have been all reduced to bales. The bale weighs about one hundred pounds.

The annexed statement shows the value of the principal imports into Cincinnati, for the years ending August 31, 1863 and 1864:

	1864.	1863.
Apples, green	$340,896	$374,895
Ale, Beer and Porter	53,858	44,030
Buffalo Robes	11,375	29,400
Beef	83,739	16,763
Bagging	43,260	7,700
Barley	493,261	336,176
Beans	263,670	188,725
Butter	1,701,652	833,156
Blooms	73.920	49,920
Boots and Shoes	3,258,044	2,441,880
Bran, Middlings, &c	141,929	117,792
Crockery Ware, &c	448,800	185,274
Candles	39,396	65,064
Corn and Corn Meal	1,838,837	848,847
Cider	36,030	18,641
Cheese	514,739	344,315
Cotton	36,439,925	12,310,410
Coffee	9,356,925	4,953,067
Cooperage	314,323	152,939
Cattle	2,740,640	1,755,325
Cement	97,944	45,384
Eggs	103,239	91,584
Flour	2,468,691	3,036,579
Feathers	360,855	170,370
Fish	641,427	282,024
Fruits, dried	194,502	94,928
Grease	528,684	311,724
Glass	321,558	110,337
Glassware	447,174	197,126
Hemp	2,910,710	1,282,206
Hides	2,339,244	1,132,928
Hardware	6,341,400	2,647,096
Hay	499,257	272,724
Hogs	6,877,265	5,794,305
Hops	78,584	66,120
Horses	9,025,968	8,171,295
Iron and Steel	5,076,195	1,556,649
Iron, Pig	2,425,390	1,096,228
Lead	626,880	352,590
Lard	2,139,780	1,904,870
Leather	1,192,384	560,268
Lemons	27,396	81,792
Lime	83,232	54,431
Liquors	962,000	187,220
Mdse and Sundries	213,164,000	57,935,000
Molasses	1,560,400	760,680
Malt	269,024	130,906
Nails	1,538,985	557,973
Oils	787,945	752,950
Oranges	50,920	86,499
Oakum	229,696	87,264
Oats	1,139,050	787,200
Oil Cake	4,750	1,925
Onions	47,796	31,956
Pork and Bacon	3,998,181	2,618,634
Potatoes	230,752	316,249
Pimento Pepper, &c	267,720	199,410
Rye	172,315	111,846
Raisins and Figs	206,040	91,836
Rope, Twine, &c	171,374	157,164
Rice	597,300	583,680
Sugar	9,519,690	5,426,098
Seed	636,170	207,760
Salt	611,084	688,796
Shot	104,895	66,586
Starch	148,853	51,771
Sheep	176,145	77,721
Stearine	52,920	14,700
Tea	1,891,600	1,242,600
Tobacco	19,824,865	7,685,806
Tallow	143,019	128,674
Turpentine	54,558	14,700
Wines	1,374,800	580,986
Wheat	2,393,600	1,947,498
Wool	560,200	211,380
Whiskey	15,953,400	3,217,160
Yarns, Cotton	149,966	144,170
Oil, Coal	601,350	199,008
Do. Petroleum	501,925	134,832
Lumber	1,170,000	800,000
Coal	3,520,000	1,280,000
Shingles	1,100,000	85,000
Coopers' Stuff, Wood & Stone estimated	160,000	750,000
Tar, Pitch and Rosin	88,792	44,098
Total	$389,790,537	$144,189,213

The value of the principal exports from Cincinnati, for the same period, was as follows:

	1864.	1863.
Apples, green	$97,564	$115,942
Alcohol	594,130	511,139
Ale, Beer, and Porter	219,156	130,315
Buffalo Robes	5,590	43,440
Beef	355,619	231,817
Bagging	7,840	23,688
Barley	27,582	19,229
Beans	191,648	109,501
Brooms	59,835	24,042
Butter	578,004	151,228
Bran, Shorts, &c	8,572	19,281
Boots and Shoes	1,906,992	785,204
Crockery Ware, &c	169,780	117,700
Chairs	392,715	224,928
Candles	3,043,168	1,979,340

☞ The following gentlemen have been elected directors of the Ohio and Mississippi Railway Company: William T. Griswold, Samuel Gaty, Lewis B. Parsons, G. McGunnegle, and Joseph W. Alsop, Allan Campbell, and Edward Learned, of New York.

Improvements in Iron-Making.

It is well known that iron undergoes three processes before it is fit for the forge—smelting, refining and puddling. The smelting furnace only yields pig-iron, which is a combination of iron with as much carbon as it can take without becoming plumbago, and the subsequent operations tend to deprive it of its superabundant carbon in order to render it malleable. A new process has now been invented, by which malleable iron may be obtained direct from the smelting furnace. It consists in driving oxide of iron into the furnace by means of the ventilator, whereby all the carbon is at once absorbed. In order to apply this method, the hearth of the smelting-furnace must be built somewhat higher than usual, and the air driven in by the ventilator is previously made to pass through three chambers, in which it becomes charged with oxide of iron at a high temperature, the atmospheric pressure being at the same time kept very high.

Petroleum Refineries at Pittsburg.

The business of refining petroleum was first successfully attempted at Pittsburg, Pa., in 1851. There are new fifty-eight refineries in that city, with a weekly capacity of 26,000 barrels.

There were refined last year 716,000 barrels, worth when refined over $8,500,000. An equal amount will probably be refined this year, worth at present prices nearly $20,000,000. There are five hundred persons employed in these refineries, not including those engaged in teaming &c.

☞ A reduction of thirty-three and a third per cent. below the present legal rates charged for the storage of goods in Government bonded warehouses, has been directed by Collector Draper. To the rates established by the Chamber of Commerce in 1857, Mr. Barney, the late collector, added one hundred and fifty per centum. The new prices, which are to take effect Oct. 1, will be the rates of 1857, and sixty-six and a third per centum additional.

TRANSFER OFFICE OF THE CHICAGO AND NORTH-WESTERN RAILWAY CO., No. 8 Wall st., NEW YORK, Sept. 27, 1864.

COUPONS DUE OCTOBER 1, 1864, from the Equipment Bonds of this Company, will be paid on and after that day on presentation at this office.
JAMES R. YOUNG, Secretary.

George F. Salter,

SUCCESSOR TO

GEORGE S. RAINSFORD,

51 Exchange Place, NEW YORK.

STOCKS AND BONDS Bought and Sold on Commission at the New York Stock Exchange.

WANTED

A gentleman with a capital of $25,000 to take an interest in a Car Manufacturing Establishment at New Haven, Ct. The business is already established, with a large capital invested, and in successful operation. Address this office, or box 2287 P. O., New Haven, Ct.

FOR SALE.

450 Ton, Steel Rail, Philadelphia pattern.
1000 Ton, 57 lb. English Rail.
1300 Ton, 50 lb. " Rail.
2 Locomotives 14x22 Cylinders, 6 feet Drivers, now ready for delivery.
20 Platform Cars.
The Cars and Locomotives 4 feet 8½ gauge.
Apply to
4138 GEO. T. M. DAVIS,
New York, Sept. 14, 1864 47 Exchange Place.

Ely Copper Mining Comp'y

CANADA EAST.

Office, 82 Broadway, N. Y.

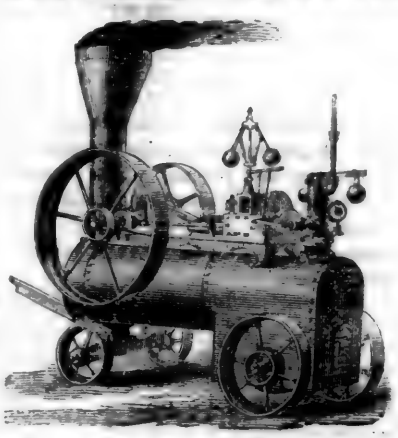
Capital Stock, - - - - - - $500,000.

100,000 Shares—Par Value $5 each.

TRUSTEES.

JOHN E. BODY, President.
STEPHEN HILLS, JR., WM. BARCLAY PARSONS,
GEO. V. N. BALDWIN, EDGAR DE PEYSTER,
ERNEST SACCHI, Secretary.

The Trustees offer for sale 15,000 shares of the capital stock of this Company.



The property consists of 325 acres valuable mineral land, twelve miles from Richmond Station, on the Grand Trunk Railroad, Canada East. The mine has been worked down to the rich copper-bearing veins, and is a property of great value.

It is entirely free from debt.

For full particulars apply as above, or at the office of
HENRY G. STEBBINS & SONS.
46 Exchange Place.

Where subscription books will be opened.

PORTABLE ENGINES

THE WASHINGTON IRON WORKS,

NEWBURGH, N. Y.,

Are prepared to furnish Engines of all sizes, from Three to Thirty Horse Power, at short notice.

AGENCY IN NEW YORK,

55 Liberty Street, Room 8.

RICHARD DUDGEON,

MACHINIST,

24 COLUMBIA ST., NEW YORK,

WOULD respectfully inform his friends and the public that he has removed to his new Building **No. 24 Columbia Street**, where he is prepared to furnish

Hydraulic Jacks, of from 4 to 150 tons lifting power. PULLING JACKS of different sizes.

Hydraulic Presses WITH PLATENS.

Hydraulic Punches for punching iron from three-eighths to 1 inch thick. **Force Pumps** for Hydraulic Presses. Force Pumps for testing tubes, cylinders, etc.

STEAM CARRIAGES for good hard roads.—Squirting Oil Cans, also Danver's Patent Steam Hammer

SAVING OF FUEL TO PARTIES USING STEAM.

DAMPER REGULATORS.

GUARANTIED to effect a great saving in fuel, and give the most perfect regularity of power. For sale by the subscribers who have established their exclusive right to manufacture Damper Regulators, using diaphragms or flexible vessels of any kind. **CLARK'S PATENT STEAM AND FIRE REGULATOR COMPANY, No. 5 Park Place, N. Y.**

New York, Saturday, October 8, 1864.

Railway Property.—Its Permanent Value Considered.

As there is a very large class of people who save their earnings, and do so that they may derive an income from them to maintain themselves and their families after the toil of life becomes fruitless from the effect of age, and as it is the class of economists who really add to the wealth of a nation, it is the subject of much anxiety with them to know how they may best invest the surplus of their acquisitions. We have all along recommended to those, especially of the patriotic class to trust the Government, which wants money to sustain the Union, and insure the stability of our institutions, and to invest in its securities without hesitation. We have again and again placed before our readers the immense resources of the country, its progress, and the untiring enterprise of our people. And the response has everywhere been prompt and confiding. But there is also an immense amount of capital invested in other securities, particularly in railways, and the fluctuations in the prices of these have sometimes caused some anxiety as to their permanent value. The object of our present remarks is to assure these persons they have not the least cause for anxiety. In order to place this subject in its own true and wonderful light, we may quote some facts from our own columns of January 1862.

At that time there were opened and under contract in the United States 51,114 miles of railways, and open for traffic and actually in operation 33,222 miles. The cost of these roads and their equipments was $1,192,400 24. Since that time some hundreds of miles have been constructed and are now in successful operation. The Atlantic and Great Western is a remarkable example of the rapidity of construction, and the corresponding increase of traffic since that year. The net earnings are on a large and satisfactory scale, as will have been seen by the readers of the JOURNAL. It would occupy too much of our space to go into details to prove this, but we are perfectly safe in asserting that the net earnings of these are about two hundred millions of dollars per annum.

Here is a vast interest therefore, permeating every part of the country in which there is an universality of combination, both of those who own, and those who employ these railways. The whole population is combined to keep them in activity.

What is their future? May we consider them as permanent productive institutions? General principles control all the conduct of life, and with few exceptions those who rely upon them are the shrewdest and most successful. They may be applied in this instance without the least hesitation.

We say then that railways depend for their success on their traffic and management. Without business and careful control of it, no company can succeed. Wherever these two simple elements are found, success is certain. There are cases where the future has been discounted prematurely, but where time has been allowed to do its work, even rashness has not always been unfortunate. The Illinois railways were apparently in many cases prematurely undertaken, but their necessity after all has not only been demonstrated, but they have become favorite properties with capitalists, and are now deservedly held in high favor.

Traffic is of two kinds, that of freight and passengers, and these are of two characters, through and way. Strange to say it has been found in almost all cases, the way traffic has been proportionately the most valuable and remunerative, and there is a reason for it. Those at short distances from each other are more likely to traverse them often, than those who are compelled to take long journeys which require more time and are more expensive, though the object of them may not be of more consequence. But still the whole rests upon the main fact of population and the business which it creates. Wherever there is the former, the latter may be depended upon, and thus we find that there are railways to or through all our great cities and towns, whether inland or on the coasts of the lakes or the ocean. It is hardly possible to name a large place in the United States into which a railway does not enter. And what is equally observable is, that wherever there is a district which can supply any other with a particular article for consumption, it connects itself with some main line of railway. We see then that freight and passengers are ever ready to contribute their support to lines of communication between one commercial centre and another, and therefore the system of railways, though an idea of our own times is likely to be perpetual. Of its stability there can be no doubt whatever. No other mode of transportation is likely to be substituted by land, as the whole resources of philosophy and the mechanical powers have been applied to perfecting it. Whatever improvements are yet to be made will be in details, in the economical application of well-known principles, and in the greater skill in their use.

With all these wonderful results, however, there is another practical principle to be studied and observed. And this is management. The best line in the world, the most profitable route may produce nothing if it is not well managed. Hitherto it has been too much the case that this duty has been committed, merely to speculators in the shares themselves, and who have mainly looked to their value in the street instead of their intrinsic values. This evil is curing itself, for it is observable of late years, that the actual working of the railways has been more carefully committed

to the superintendence of the most skilful men. Probably there is not in the world so active, intelligent and practically scientific a body of men as that of our railway engineers and superintendents. They have addressed themselves to their duties with unequalled ardor and diligence, and the results are plainly to be seen in the reduction of working expenses, economy in the use of materials, improvements in engines and permanent way, in the selection of better materials, and a more scientific application of power to the work to be done.

This advance in railway management has had its effect upon net earnings, and saved many a company from permanent and hopeless embarrassment.

Under these encouraging circumstances is our railway property to lose its value? Is it dependent on any other source for prosperity than those we have mentioned? Is the fluctuation in prices of other securities really to impair it? Certainly not so long as the country proceeds in its present career. And the railways of the North, the Middle and the Western States have not as yet suffered from the change of our normal condition of peace to that of war. On the contrary they have so far gained by it. There will, after the war is over, be the same number of people to supply with the necessaries and luxuries of life as there is now, and more so, for at present hundreds of thousands of men who are in the field do not require, do not get, and do not consume as many of the more valuable articles of commerce as they would if again engaged in active pursuits. In all probability there will be a greater eagerness than ever, for articles of which they have been necessarily deprived, and wherever they may cast their lot, either in their old homes, or in new fields of industry, the numerical wants will be the same. Instead of the Government filling the trains with aggregates of supplies, they will be filled through the medium of commercial foresight and enterprise. The same mouths to feed, the same bodies to be clothed will still be dependent on the railway system of transportation, though in different directions. In addition, the territory now desolated by war will require supplies which it has so long been without, and on the return of peace, and for many years to come, railway transportation through our long interior lines will be more active than ever.

And finally, the industrial products of the country like its population will increase in the same enormous rates which has marked them through each decade. A hundred millions of inhabitants in 1890, only a generation distant from ourselves, will be dependent on our railway system for their supplies, their comfort and their welfare. Can such a system fail? We may have war, we might have separation, we might suffer from many as yet unseen causes, but in this era of the world, railways must be the thoroughfares of nations. No change in political systems can efface their necessity or dispense with their use. Men may differ about policy and about men, but they must continue to ride the iron horse. Brushing aside, therefore, the cobwebs of speculation and doubt, we can see clearly that railway property is permanent in its character, its utility and its revenues.

☞ The Chesapeake and Ohio Canal is again in navigable order between Cumberland and Washington, all repairs having been made. Coal boats are now passing freely over the canal.

Sandusky, Mansfield and Newark Railroad.

The earnings and expenses of this road for the years ending December 31, 1862 and 1863, have been as follows:

Earnings:	1862.	1863.
From passengers.....	$90,851 03	$120,878 39
" freight	132,471 38	131,186 23
" mails, express, etc.	16,073 26	20,137 80
	$239,395 67	$272,202 42
Expenses, viz:		
Repairs of engines.....	$10,299 79	$14,582 72
" cars.....	16,484 64	18,898 98
" track.....	54,138 37	57,860 12
Train expenses.....	23,289 86	25,036 56
Station "	17,974 38	22,526 99
Shop "	2,135 68	3,658 66
Fuel.....	13,052 21	16,343 88
Oil and waste.....	1,935 88	2,727 63
Salaries, etc.....	17,096 38	18,283 11
	$156,407 19	$179,918 65
Net earnings	$82,982 48	$92,288 77

Compared with the previous year, the gross earnings of 1863 show an increase of $32,806 75; with an increase in expenses of $23,511 46—making the increase in net earnings, $9,301 29. The report says:

The amount of wheat transported over the road during the year 1862 was 662,242 bushels—in 1863 it was 306,653 bushels, and of this amount only 138,283 bushels were transported the last half of the year.

With us, as with other roads, the increase in revenue has arisen from the general prosperity in which all have partaken, and not, as is usual with us, from the abundance of the staple product of the country along the line.

We refer to the annexed report of Mr. James H. Stewart, Superintendent for details in reference to the Road bed, machinery and running department.

From that it will appear that we have ballasted thirteen miles of track, laid eighty-one tons of new and one hundred and seven tons of re-rolled rail, besides making other alterations and improvements during the year, and that while the running department has been conducted with efficiency and economy, the road bed and track has been maintained in good condition and repair.

The domestic bond debt is now very nearly all paid. Of the first issue amounting to $100,000 all but $2,900 had been paid at the close of last year. Eight hundred dollars of that sum, has been presented and paid since that period. Of the second issue, $20,000 in amount $13,000 and interest has been paid since the last report, leaving $7,000 yet due and making $9,100 yet outstanding of all the bonds issued under the order of the court.

At the meeting of the Board of Directors in April last, resolutions were passed to change the gauge of the road and of the machinery. As this is the inauguration of a new policy, some explanation of the reasons which led to it, is due to the Bond and Stockholders.

The line of the road commencing on the southerly bend of Lake Erie runs through a rich agricultural district, in a southeasterly direction to Newark, one hundred and sixteen miles. Its gauge which is five feet four inches is unlike the gauge of any other road in the State except one, and though its line is intersected at each end, and at several intermediate points by other roads, the cars of the company cannot pass to or from its connecting lines.

The original charter for that portion of the Sandusky Mansfield and Newark Railroad which lies between Sandusky and New Haven was granted in 1838. About the same time or shortly after, charters were granted to the Mad River, the Cincinnati, Hamilton and Dayton, and the Little Miami Railroads.

Very crude notions prevailed as to the uses of Railroads at that period. The charters above referred to, or some of them, were framed upon the supposition, that the owners of Freight would furnish the power and the companies would erect toll houses to collect tolls for the use of cars and track.

The controversy in respect to gauge had not been settled, and the Directors of the first named road adopted a medium gauge between the wide and the narrow; but upon the accidental purchase of the first engine for one of these roads depended the adoption of its gauge, and thence also the adoption of the same gauge, four feet ten inches, for the State.

At that period the Alleghany mountains were viewed as an insurmountable barrier to direct east and west Railroad communications, and the opinion was generally entertained, that the principal use of railroads west of the mountains would consist in furnishing the means of transportation to and between navigable waters.

The first railroads in Ohio were projected upon this view of their uses and consequently extended mostly in a north and south direction. But the progress made in Railroad construction and the improvements in Locomotive power were rapid. The obstacles in the way of direct and independent lines of road to tidewater across the mountains, were overcome, and long lines of connection became possible. Their immensely increased capacity for the transportation of Passengers, and especially of freight, was developed and the whole energy of our people was stimulated in one direction. The great trunk lines were constructed and the vast and increasing traffic between the east and the west, that poured over them, soon diverted a great portion of the commerce of the country from the old channels, creating new centers, and aggregating populations upon them.

Under this stimulus the rich prairies of the west have been settled by an active and industrious population. Towns and cities have arisen and the products of the country now afford ample employment for all the lines of roads between the east and the west. Nor is the progress at all abated. The movement of freight and populations is accelerated as new districts of country open and the tillage of the old is extended, and seems likely to continue on the increase.

In the course of these events the Sandusky, Mansfield and Newark Railroad, being isolated in gauge, was left out of the long lines and its own local business was much impaired by intersecting lines.

Notwithstanding these discouragements the grain crop was relied on as still secure to its line by its insulated gauge; but the experience of the last few years has shown that it so often fails, or when good, the price is so often insufficient to bring it out during the season of navigation, that it cannot be relied upon to furnish steady employment for the equipment, while its ordinary equipment would fall far short of furnishing means of transportation when the business was at its height—which was only at long intervals. The local freight at other seasons is too limited to make up the deficiency.

Much reliance was at one time placed on the business to be done in connection with the Scioto and Hocking Valley Railroad, on the completion of that line, for an increase in earnings. That road commences at Portsmouth on the Ohio River, and terminates at Newark, where it was to connect with the line of the Sandusky, Mansfield and Newark Railroad, thus forming with that road, a route from the river to the lake on the same gauge, and opening up a new source of profit by the transportation of the coal and iron of that region and by an interchange of commodities with it.

The road is however only completed to the crossing of the Marietta road; though it is graded the greater part of the residue of the distance. We cannot learn that any measures have been taken to ensure its early completion. Should the enterprise be prosecuted to a successful issue the Directors of the company would probably adopt the Ohio gauge.

Placing out of view therefore any increase of business by the completion of that line as too distant and uncertain to be relied on for present revenue, and as not materially effecting your inter-

ests in the policy to be pursued for the future, nothing is more certain than that the continuance of the present gauge, which precludes all interchange of business with other lines and would compel us to rely for our earnings on our local traffic, would be a grave mistake.

For roads situated like this to command a large traffic, the business must necessarily be done over connecting or continuous lines; and the net revenue will depend not so much on high rates, which, on the leading routes will generally be prevented by an active competition, as it will on securing a regular, full and permanent business with only remunerative rates.

The Baltimore and Ohio Railroad has two connecting lines west of the Ohio River, one by Parkersburgh to Cincinnati, one by Bellair and the Central Ohio; but none communicating directly with Toledo, Chicago and the Northwest. In view of these wants communications have been had with the Officers and Directors of the Baltimore and Ohio, the Central Ohio, the Cleveland and Toledo, the Michigan Southern and Northern Indiana, and the Toledo and Wabash Railroads, by the Officers of this company, with the object of forming a line between Chicago and Baltimore with no interruption except crossing the Ohio at Bellair. The shortness of this line between Chicago, or the Mississippi and the tidewater, and its intersection of all other lines cannot fail to secure great advantages to it.

To accomplish this, the Directors of the above named roads, except the Cleveland and Toledo Railroad company, have entered into an agreement to form and establish the line for the transportation of freight and passengers, and to do business in connection with the Cleveland and Toledo Railroad over it, the latter company having passed resolutions acceding to the project and agreeing to exchange business with the line at Monroeville.

In order to avail ourselves of the benefit of this business to the fullest extent, and to give to the public that assurance of its prompt and safe dispatch which the competition for it demands, it becomes necessary to change the gauge of our track and machinery to correspond with connecting tracks. The contract referred to requires this to be done.

This will involve an outlay of some eighty thousand dollars beside an expenditure of an equal amount for the purchase of four new first class locomotives contracted for in June last, and in changing our line at Newark, and putting in connecting tracks at Monroeville, including the cost of erecting station buildings at the last named place.

But the importance of the business to be secured by it, not only in through traffic, but in increasing and extending the ordinary business of the road in lime, lumber, coal, salt, fish, and other articles of home trade, will, in the opinion of the Directors, justify the outlay; and unless their expectations, which have so often failed to be realised, shall again be subjected to disappointment, they will be able, partially or wholly to resume the payment of interest on their mortgage bonds at no very distant day.

The earnings of the road since reorganization in 1856 have been barely sufficient to pay the costs incident to reorganization, the current running expenses, interest on the mortgage debt up to and including January 1st 1858, reduce the domestic bond debt from $120,000 to $9,100, and out of the earnings of 1863 to apply $23,094 21 toward the change of gauge, reserving a cash fund of about $62,000 to be applied toward the same object.

The interest on the mortgage debt of $1,290,000 has been accumulating since January 1st, 1858. At a proper time the Directors will present to the Bondholders a scheme for funding the coupons that have fallen and will fall due on and prior to January 1st 1865.

In providing for the above expected increase of business it will become necessary to increase our stock of cars and our shop accommodations. The bondholders will therefore be called upon to exercise their patience a while longer. It is expected however that the revenue of the road, notwithstanding the interruption of business while changing the gauge will be sufficient to pay the coupons maturing January 1st, 1865, and also, with the means now on hand to pay the ordinary and a part of the extraordinary expenses in the meantime.

We shall be prepared to commence changing the gauge of the track as soon as the frost leaves the ground.

Upon investigation it was ascertained that the business over the Huron Branch was kept up at an annual loss to the company of over six thousand dollars; whereupon the Directors at their last July meeting directed its discontinuance; and it has been discontinued. A portion of the rails removed have been used in the main track and the residue will be available for that purpose hereafter.

The company have 10 locomotives; 9 passenger, 2 baggage, 28 platform, 82 grain, 47 merchandize, 11 stock, 10 ditching, 5 rack and 20 hand cars. Miles run by locomotives, 220,717. Through passengers carried, 1,799; way, do., 135,809. Total tonnage, 67,352.
